

LATAH COUNTY NEWS PARAGRAPHS

Clipped From The Columns of Neighboring Papers.

Troy News: With this issue of the Troy News the ownership of the plant goes to Mr. G. H. Rice, of Malden, Wash., who will take charge Monday morning May 16. Mr. Rice and family come highly recommended and we hope for them a pleasant and substantial business relation with the patrons of the News. Mr. Rice is reported to be an excellent newspaper man and we predict that the News will be better than ever. In leaving the News we are quitting on account of our health, which has not been the best for some time past. We do not expect to leave Troy so far but that we will occasionally drop in and call on our friends. During our stay here we hope that our efforts to help make a better community were appreciated, already we can see some fruits of our labors. So here is to you one and all, good luck and may you always prosper.

Genesee News: Follet Bros. Mercantile company, Emmett & Bolion, Clark's drug store and Dieus' drug store closed out their stocks of tobacco on Wednesday, May 4, and will not handle it in the future. The new Idaho tobacco law, which went into effect May 5, makes it necessary for a firm selling tobacco to take out a \$50 license and give a bond for \$500 and these firms decided not to handle it longer.

This will place the tobacco business in the hands of three firms—Edwards & Son, Smolt & Son and F. E. Lambert.

Deary Press: The village marshal has his instruction from the council to at once take into custody any person caught exceeding the 15 mile speed limit inside the village. The speed ordinance, like other village ordinances, was made to be enforced and is going to be enforced. It's purpose is to lessen the danger of accidents. The majority of automobile accidents in towns and cities are caused by fast driving. The council warns autoists that the speed ordinance is going to be enforced to the letter, and that any and all persons caught violating it will be taken straight into court.

Star-Mirror: Moscow, will have a celebration of the Fourth of July and also have a county fair. This was definitely decided at the mid-week luncheon of the chamber of commerce, Wednesday. The fair had already been decided upon for almost everyone in Moscow is enthusiastically in favor of it, but the celebration of the birthday of American Independence, has been in doubt. All doubt was removed Wednesday when the chamber agreed to give the American Legion \$300 to help hold a celebration here and announced that it will support the legion in having a quiet, patriotic observance of the day and the legion is to have the profits from all concessions.

Julietta Record: Frank Vincent, Sunday visited the deposits of lignite coal uncovered at a point on the Wilson hill near Arrow during the construction of the state highway at that point. The vein is about 5 feet wide, Mr. Vincent says. The top of the vein shows about two feet of cracked lignite with coloration of clay in the cracks. The hanging walls are blue basalt. Mr. Vincent says, while the floor is a thin layer of porphyry. The coal, it is said, has been tried and burns very good. The formation of the hill on this side of the vein is principally magnesia rock while on the opposite side is mostly blue basalt. It is reported that some leases have been made on land across the Clearwater river with the view of trying to locate the coal deposits on that side of the river.

Have a Real Garbage System —By Audrey Stanton—

There is one thing which Kendrick needs worse than most things and that is some system by which people may dispose of garbage and refuse instead of having to throw it into the streets and alleys.

When you walk down main street you can see all kinds of fruit peelings, papers etc. thrown into the street which gives the whole town an unclean and unsanitary appearance. We do not notice this as much as outsiders do who are just stopping to see the town. This thing could be helped a great deal if there were a few inexpensive but attractive garbage cans with covers, put on the corners or on every block.

You may say "Oh that wouldn't do any good because people would never take the pains to go very far just to put a fruit peeling or candy paper in a garbage can." But any one who says this is mistaken because most everyone would rather take a few extra steps than throw garbage into the main streets to decay and make homes for flies.

It isn't just papers and banana or fruit peelings that are thrown in the streets, but you go down the back alleys and all you see is tin cans piled up in stacks, some times two or three feet high. This is another thing that should be helped because all kinds of bacteria germs collect in such places, and are scattered by the wind, and carried to the people around town. The result of these germs being carried is the starting of an epidemic. But people do not think of the danger there is in throwing refuse out side or I am sure they would not do it.

Such things give off unpleasant odors, and make it very uncomfortable for people living around there. This is a fine way for a store to put up an advertisement which will attract much attention, and also help the town, by the store buying one of these garbage cans and having a very attractive sign painted on it and setting it on one of the corners to collect peelings, papers, etc.

If every store would buy one of these cans, there would soon be enough to supply the whole town.

Don't Monkey With Nature

Dangerous, indeed, are the attempts to interfere with nature. Trinidad in the West Indies wished to rid itself of rats and snakes, so it imported from the neighboring island of Santa Lucia the mongoose, which specializes on eating both snakes and rats.

The result has been seriously to cut down the sugar production of Trinidad. The illogical mongoose, turning aside from its duty of eating only rats and snakes, began to eat a variety of lizard which had been in the habit of eating the "frog hopper," which in turn destroys the sugar cane.

So we have a "vicious circle," more mongooses (it is difficult not to write mongeese), fewer lizards, more frog hoppers, less sugar.

Honolulu once tried a similar experiment. It imported the mongoose to eat the Japanese beetle, which was destroying the flowers. The mongoose, however, preferred the frog, which was a more potent enemy of the beetle and left the insect pest to thrive unhampered. More mongooses, fewer frogs, more beetles, fewer flowers.

In one district of Mexico coyotes were thought too common. Poison was brought in literally by the carload and the coyotes suffered. The result was that rabbits increased so that they destroyed the chief food crop of the country.

It is a dangerous task, this trying to improve on nature.—The Nation's Business.

Mrs. Herb Slocum, who lives near Deary, attended the senior play here last Friday evening. Mrs. Slocum is a sister of Curtis Bailey who graduates from the high school next week.

Margaret Reynolds Company A Delightful Artists' Trio Scheduled for Two Concerts on the Second Day of Chautauqua

Mary Adel Hays, noted American coloratura soprano, organized and coached The Margaret Reynolds Company of New York. It is a trio of musical artists, each member having attained prominence in their respective field of musical endeavor. Margaret Reynolds, soprano, who heads the company has a rarely beautiful voice, ample in volume and rich in quality. Miss Taylor, violinist, is a pupil of the great Leopold Auer and is one of the most promising young artists on the concert platform. Guy Marriner, the New Zealand pianist, is a brilliant artist on the piano and in his pianologue work.

School Notes

The final eighth grade examinations were completed last week.

A picnic was held by the Domestic Science class, Tuesday evening, May 17, at the shooting grounds. Miss Hood attended as an invited guest.

The final semester examinations will be held Tuesday and Wednesday of next week.

The seventh and eighth grade classes held a picnic at the Ice Mines, Tuesday evening.

Thursday, May 26, a picnic for the entire school will be held.

Ernest E. Holmes of the Lewiston State Normal School was a High School visitor, Wednesday.

The Baccalaureate Service will be held Sunday, May 22, at the Presbyterian church. The sermon will be delivered by Rev. H. H. Mitchell of the Episcopal church in Moscow.

Commencement Exercises will be held in the M. E. Church, Wednesday, May 25. The address will be given by Dr. J. F. Messenger.

The Alumni Reunion will be held in the High School, May 27.

On Wednesday afternoon the entire school adjourned to the Methodist church to listen to an address given by a representative of the Anti-Tuberculosis Society. It proved especially entertaining to the smaller children.

Kendrick Kids Won

The ball game played here last Sunday between the Kendrick Kids and the boys' team of Troy was won by the locals. The score was 7 to 4 in favor of Kendrick. Both teams were composed of boys 18 years of age and under.

Chamberlain and Herres furnished the battery for Kendrick and Holland and Burges for Troy.

The game was played immediately after the Kendrick-Ahsahka game and created a great deal of interest. Manager Harry Stanton announces a return game at Troy next Sunday.

Following is the lineup of the teams:
Troy: Burges, c; Chaney, lf; Saad, 2b; Holland, p; Newman, 3b; Wright, 1b; Todd, rf; Shepherd, cf; Halstrom, ss.

Kendrick: E. Flaig, ss; C. Stanton, 1b; O. Eichner, 3b; Perryman, 2b; Chamberlain, p; Herres, c; W. Eichner, cf; H. Flaig, lf; Brown, rf.

The Chautauqua Program

That the Chautauqua program for the coming season holds much of interest for the lecture, music and entertainment lovers is indicated by the advance information from the Ellison-White Association. The dates for Kendrick have been definitely set for June 15-19.

The feature musical event of the week will be the two concerts to be presented on the last day of the assembly by Witepskie's Concert Orchestra. This Chicago organization under the leadership of Meyer Witepskie, pianist and director, is one of the best known orchestras on the Chautauqua platform and one that is always in wide demand. Olive McCormick, noted coloratura soprano, formerly with the Pittsburgh Symphony Orchestra, will appear as soloist in the evening concert. Miss McCormick has a glorious voice with unusual range and sweetness of tones. Other musical companies scheduled during the week are the Apollo Duo, the Margaret Reynolds Company and the Valda Four, each presenting two concerts.

The great comedy success, "It Pays to Advertise", presented by the Keighley New York Players, is one of the feature attractions of the week. Probably no funnier farce has ever been written than "It Pays to Advertise". In the hands of an all-professional cast, such as is scheduled for Chautauqua, it should draw a record crowd at the assembly.

Carveth Wells, of London, England, prominent British explorer, will contribute an illustrated lecture of genuine interest and value the fourth night of the assembly. For six years he was on official exploration work for the British Government in the jungles of the little-known Malay peninsula.

Another prominent lecturer during the week will be James A. Burns, President of Oneida Institute of Kentucky, more familiarly known as "Burns of the Mountains". His address, "Remaking the Kentucky Mountaineer", is the story of his great educational work among the feudists in the heart of the Cumberland.

Brevity

An instructor in short story writing, drilling his class in selection and compression of details, illustrated his lecture with this story:

Two Maine farmers, who were noted for their brevity of speech, met one morning on the village road. They both drew rein.

"Mornin', Zeb."
"Mornin', Hank."
"What did you give yer hoss when he was sick?"

"Turp'ntine."
"Turp'ntine?"
"Yep."
"Git-ap."
"Git-ap."

That was all.
Next morning they met again.
"Mornin', Zeb."
"Mornin', Hank."
"What did you say you gave yer hoss when he was sick?"

"Turp'ntine."
"Turp'ntine?"
"Yep."
"Killed mine."
"Killed mine."
"Git-ap."
"Git-ap."

The Senior Class Play

The senior class play, "Billy's Bungalow", presented in three acts at the Grand Theatre last Friday evening was a great success. The crowd was not large but those who attended were well pleased with the entertainment.

The various parts of the play were exceedingly well carried out, and the characters were most skillfully handled. Much credit is due Miss Hood for her tireless efforts in coaching the members of the cast and for the pleasing manner in which the entire play was presented.

KENDRICK WON BASEBALL GAME

Defeated Ahsahka by Score of 14 to 2

The baseball "jinx" in Kendrick has faded away. Last Sunday the local team won its first game of the season when it defeated the Ahsahka aggregation on the Kendrick diamond by a score of 14 to 2. It is the first demonstration of real baseball that the home team has displayed but now that the boys have hit their stride a long string of victories may be looked for.

Ahsahka had a team composed almost entirely of Indians. They allowed a number of costly errors, which, combined with 14 hits for Kendrick spoiled any chance they had for winning.

George Carlson and McCrery were Kendrick's battery and they did good work. This is the first game George has played this season but he showed up well. McCrery pitched a dandy game allowing but 1 hit. He also made the feature play by

"McCrery Making a Home Run"

lining out a home run. Forest caught the last two innings of the game. He was kept on the bench the first 7 innings on account of a sore arm.

Samuels pitched for Ahsahka and allowed 4 three-base hits, 5 two-base hits, 6 singles, 2 Walks and 1 home run.

A game with Orofino will be played here next Sunday afternoon.

Following is the lineup of the Kendrick and Ahsahka teams:

Ahsahka—Marks, c; H. Thompson, 1b; Reynolds, 3b; E. Hines, ss; N. Hines, 2b; J. Samuels, p; Geboe, lf; A. Samuels, cf; R. Thompson, rf.

Kendrick—Palmer, cf; Compton, rf; Bolon, lf; Bullfinch, 3b; McCrery, p; Chamberlain, ss; McCall, 1b; Densow, 2b; Carlson, c; Forest, sub.

Ahsahka 1 0 0 1 0 0 0 0 — 2
Kendrick 2 1 3 1 0 4 0 2 — 14

Texas Ridge

Mr. Chester Bogar went to Moscow last Wednesday.

Mr. and Mrs. James Pierce returned home last week. After two weeks visit in Clarkston and Touchet, Wash.

Mr. and Mrs. Birchmier spent Sunday afternoon at Ogden's home.

Mrs. Weber and daughters were Sunday visitors at Viola Baker's.

Mrs. E. C. Babcock spent last Wednesday with Mrs. Frantzich.

Mr. and Mrs. Joe Pierce of Moscow visited on the ridge Sunday, guests of Mrs. Bogar.

Mrs. Dave Ousterhout and daughters of Spalding are visiting on the ridge.

Mrs. Harry Baker was a caller at the James Pierce home Sunday.

George Eacker and wife, Smith Eacker and James Miller and family, spent Sunday at John Gentry's.

Mrs. Frank Bailey and brother, Alonzo Brown, received a telegram, Sunday, stating their mother was not expected to live. They left Monday morning for Montana, to be at her bedside.

H. W. Comstock of Troy, visited with his brother, on the ridge, Tuesday.

Kendrick Gazette

Ralph B. Knepper, Publisher

Entered as second-class matter 1892 at Kendrick, Idaho, under the Act of Congress of March, 1879.

Subscription \$1.50 a year.

Foreign Advertising Representative
THE AMERICAN PRESS ASSOCIATION

A young merchant from a neighboring town was complaining about his local newspaper. He said it was a dead one, didn't have much in it and he wanted to know where he could get some boosting material for his local publisher to help boom the town. The paper referred to comes to the Gazette office every week and we often noticed that it didn't contain very much—advertising. A paper without advertising patronage can hardly be expected to be anything but "a dead one". There are no better community boosters than good, live ads in the local paper and nothing benefits the community more than a good local paper.

Nez Perce county, like a number of other progressive counties of the state, has a county health nurse to look after the health of the school children of the county. Latah county has a county agent and a part of his duty is to look after the well being of the livestock of the county. Of course this is an important work but hardly as important as the health of the children. An efficient health nurse can get splendid results which are beyond figuring in dollars and cents. The physical welfare of the children ought to be just as carefully taken care of as their mental training.

"Men to Sleep in Church," reads a newspaper heading. While there is nothing unusual about that, it turns out in this case that they are invited to do so in order to solve the convention problem.

A Chicago woman in her will left \$8,000 for the care of her pet dog. A country editor meekly remarks that if the dog dies the money will probably go to the husband.

There are two things that you are almost compelled to have these days. One is to own a car and the other to have your appendix removed.

"Whipped cream covers a multitude of culinary crimes," grunts the El Dorado Times.

It is said that a Kendrick young man is eating robin egg sandwiches to try to improve the quality of his voice.

Pasture on the hills of the Potlatch is better this year than for many years past. The absence of extremely hot weather and the abundance of moisture have contributed to the unusually heavy growth.

A man who will bet on a prize fight is an easy victim for the oil stock salesman.

A proportion of labor is out of a job at the old wages and sees no chance of going back to work unless it accepts a reduction. Those are the facts with which we have to deal; they are not pleasant to the wage-worker, but neither is being jobless pleasant while bills continue to pile up. All abuse spread by labor leaders and the various charges disseminated by agitators of "Conspiracy by capitalism," do not change the facts. High wages are desirable, not only for the worker but for the community generally, but when industry can no longer pay those high wages, something has to give way. The question that labor generally must face is whether reduced wages are not better than none at all. Lowered wages may be only a temporary thing, but they seem to be necessary to get things started again. Acceptance of a reduction in the pay envelope at this time need not be considered as final. Workers know that in prosperous times they pretty generally get what they demand. But in dull times they must take what they can get. This is the truth that must be faced.—Washington State Weekly.

Linden Items

Mrs. Keeler and Gertrude, spent Friday afternoon at Clarence Harris'. Bertha McAllister and Nona also called at the Harris home Friday.

Miss Carrie Allen called at the Smith home Friday.

Mrs. Mary Vaughan and son, Ted, spent Sunday in Moscow at the home of her son, Lyman.

Mrs. Rose Sampson of Spokane arrived Sunday, for a visit with her parents, Mr. and Mrs. W. Zimmerman.

Florence and Commy Perry of Juliaetta are visiting their grandparents. Mr. and Mrs. Jim Garner.

Mr. and Mrs. Elmer Shingler and children were Sunday visitors at the C. H. Fry home.

I. E. Foster and Roy Bohn who were working at Long Meadow spent the week end on the ridge.

Mrs. Jim Hall and Mrs. Granvill Wall spent Wednesday with Mrs. Clarence Harris.

Mrs. Rube Garner returned Sunday from Bovill where she has been with her father who is in the hospital there.

Southwick News

Last week, Wm. Wright, while firing at the Nedvidek sawmill, was severely injured by a piece of flying steel. He was taken to Lewiston and with the help of the X-ray the particle was located and removed. At last report he was improving.

Rossell Betts, was thrown from a vicious colt and badly bruised, but luckily no bones were broken. He is doing well.

Wm. McClelland, Glen Jones and Dr. Baker attended the Masonic lodge at Kendrick last Thursday night.

Mr. and Mrs. Carl Smith of Juliaetta are visiting their parents, Mr. and Mrs. J. T. Smith of Southwick.

Mr. and Mrs. L. J. Southwick entertained at dinner Sunday. Those present were Mr. and Mrs. Hiram Alber, Mr. and Mrs. H. D. Hayward and their families.

The Zieman's have been called to Wisconsin on account of the serious illness of their mother.

Mrs. Calvert accompanied her husband on his circuit last Sunday. Her many friends are glad to know her health is much better at Juliaetta.

Cameron News

We are pleased to report that Mrs. George Ehlers is home and are all glad to see her smile again.

Fred Reil of Leland visited with Andrew Entman, Sunday.

Mr. and Mrs. Blum and daughter and Mr. and Mrs. Oldag were visiting at the Carl Lohman home Sunday.

Miss Bertha Wendt came up from Lewiston, Saturday, and visited with her parents over Sunday, returning in the evening.

Mr. Blum is having his barn constructed this week. The carpenters are Carl Hartung and August Brammer.

We wish to correct the error in last week's paper. Cameron News did not have rheumatism.

Mrs. Alexander and Mr. and Mrs. Adams of Juliaetta were on the ridge Sunday.

Mr. and Mrs. Carl Wegner, Mr. and Mrs. William Rogers, Adolph Wegner and little daughter, were visitors at the August Wegner home, Sunday.

Herman Wilken was a Lewiston visitor last week.

William Abitz of Spokane arrived Monday to visit with relatives several days.

Paul Siiflow of Clarkston was visiting friends and relatives last week.

Presbyterian Church

Robert M. Hood, Minister.

Cards and dancing will be discussed in the sermon Sunday morning. With a subject of this kind, some may expect a narrow, bitter, unchristian harangue full of unfounded statements and scathing denunciations. But please wait until you have heard the sermon before you pass judgement. Come at 11 o'clock, or better still, come at 10 o'clock in time for Sunday school. Don't let the children miss the Junior C. E. at 3 o'clock. In the evening at 8 o'clock Rev. Mitchell of the Episcopal church in Moscow will deliver the Baccalaureate Sermon to the graduating class of the high school.

Stagnation Fatal. To be fossilized is to be stagnant, unprogressive, dead, frozen into a solid. It is only liquid currents of thought that move men and the world.—Wendell Phillips.

SUBSTANTIAL FLOOR FOR POULTRY HOUSE

Specialists Say There Is No One Best Kind.

Everything Depends on Soil and Use of Structure as to Which Is to Be Preferred—Cement Is Most Sanitary.

(Prepared by the United States Department of Agriculture)

Cement floors for poultry houses are championed by some poultry growers, while others declare a good dirt floor is the only kind to use. The fact is, poultry specialists in the United States Department of Agriculture say, that there is no one best kind of floor. It all depends on the soil, and the use of the house as to which type is to be preferred.

On light, sandy, well-drained soils a dirt floor is satisfactory, especially for small or colony hen houses. Such floors should be from 2 to 6 inches

A Plain and Suitable House for Poultry.

higher than the outside ground surface, and it is advisable to renew them every year by removing the contaminated surface down to clean soil, and to refill with fresh sand or fine gravel and earth.

A board floor is generally used where the level of the floor in the house is from 1 to 3 feet above the ground surface, and in portable houses on land which is not well drained. Board floors harbor rats, and rot quickly, and should be raised some distance off the ground so that cats or dogs can get under them, and also to allow a free circulation of air to prevent the wood from rotting.

Cement floors are adapted to permanent laying houses, to brooder houses, incubator cellars, and to all permanent houses where an artificial floor is required, and can be built on the ground level. These floors are easy to clean, very sanitary, rat proof, and comparatively inexpensive, if one has a cheap supply of gravel or sharp sand.

BROWN-TAIL MOTH IMPORTED

Inspection of French Nursery Stocks Results in Uncovering Many Nests of Insects.

Federal and state inspection of French fruit and rose stocks during recent months has resulted in the interception of 85 nests of the brown-tail moth in 32 shipments, in contrast with 63 infested French shipments which have arrived in this country during the last nine years. The finding of so many nests in such a brief period indicates that the French inspection service is much below the standard of previous years. To meet this situation, all French shipments of rose and fruit stocks are being fumigated at the port of entry under the direction of the Department of Agriculture, as well as inspected at destination by state inspectors. Furthermore, a warning has been sent to the French nurserymen and the French inspection service to the effect that if shipments continue to arrive infested with nests of this injurious insect, it may be necessary to cancel all existing permits to import French stocks.

Interceptions have been made by the state inspectors of Connecticut, New York, Indiana, Iowa, New Jersey, North Carolina, Pennsylvania, Maryland and federal inspectors in New York city, Philadelphia and Washington, D. C.

COWPEA HARVESTER.

The bean harvester, of which several types are commonly employed in harvesting field beans, will work well with cowpeas planted in rows, according to specialists of the United States Department of Agriculture. The most successful of these harvesters are constructed so that the long knives run under the vines, cutting off the stems beneath the surface of the ground.

CONTROL OF BLISTER MITE

Very Thorough Spraying, Covering Every Part of Tree, Is Recommended as Satisfactory.

Early spraying will control the blister mite on apple trees. The trees should be sprayed when the trees are dormant or when the leaf buds are swelling with lime sulphur spray in about the proportion of one gallon of the concentrated lime sulphur to nine gallons of water. The spraying must be very thoroughly done, covering every part of the tree. Unless the spraying is done early the result will not be satisfactory.

Prominent Musical Organization at Chautauqua

Witepskie's Concert Orchestra With Olive McCormick, Noted Coloratura Soprano, Coming on Last Day of Assembly

A musical event of unusual interest to Chautauqua patrons is scheduled for the closing day of the assembly in the presentation of Witepskie's Concert Orchestra with Olive McCormick, soloist. This splendid organization is under the leadership of Meyer Witepskie, a brilliant pianist and director. Since the age of fifteen he has been conducting orchestras and he has built up an enviable reputation in musical circles. He knows music and he knows his audiences. And he loves to please—always thoroughly generous in his interpretations.

Olive McCormick, noted coloratura soprano, formerly soloist with the Pittsburg Symphony Orchestra, appears in joint concert with the orchestra in the evening. She has a voice of rare and beautiful quality.

SETTING OUT NUT TREES

Nut trees, such as walnut, hickory and oak, develop a deep taproot and few lateral feeding roots during their first year. They cannot ordinarily be transplanted to the field so successfully as other trees, so that planting the nuts or acorns on the permanent site usually is considered preferable.

GROWING MUSCADINE GRAPES

Best Results Obtained by Training to Trellis, Using Three Wires Instead of Two.

The muscadine grape will produce the best results when trained to a trellis, using three wires instead of two as in training the "bunch" varieties. Posts should be at least eight to nine feet in length, and set two to three feet in the ground. The wire should be two feet apart on the posts, which should be sixteen feet apart. The vines should be set at least twenty-five feet apart in the row.

Excellent Sow Ration.

A ration which is excellent for sows with pigs is corn, grain and alfalfa. The hay can either be self-fed in a rack or ground at a small cost and mixed with grain feed.

DEVELOP HIGH-CLASS STOCK

South Carolina Farmer Attributes Many Failures to Lack of Aim in Breeding Animals.

"The development of good live stock depends not only on the use of high-class animals, but on systematic methods." This is the comment of a South Carolina farmer who has contributed his experiences to the United States Department of Agriculture, as part of an investigation to determine the cause of inferior and undersized live stock.

"Most failures with live stock," this farmer declares, "can be attributed to lack of a definite aim in breeding."

PREVENT SPREAD OF DISEASE

Potassium Permanganate Added to Drinking Water Is Good Way to Keep Off Infections.

Potassium permanganate is good to use in drinking water of chickens to prevent the spread of infections. It comes in dark purple crystals. A small quantity dissolved in a stock solution will last all summer. Add enough to the water each day to color it to a light wine color.

The Number Isn't Limited.

"One can get a lot of enjoyment out of a small piece of mistletoe," states a gossip writer. So can two!—Passing Show, London.

Treatment of Common Colds

"If all who catch cold could be persuaded to remain in bed for the first twenty-four hours of such an attack" says a well known physician, "there would be fewer cases dragging on with distressing symptoms for weeks and often ending in some more serious disease." To make sure of a prompt recovery you should also take Chamberlain's Cough Remedy. Whether sick or well the bowels should move each day.

FOR WASHING

Washing Machines
Washboards
Tubs, Boilers
Wringers
Pails
Flat Irons
(Electric and Stove Heated)

LET us make your washday less tiring by supplying you with efficient equipment. The work you can save yourself week after week easily justifies the small investment necessary in the right kind of washing equipment.

We are particularly able to show you some very good labor-saving machines—machines you can easily buy. Come in and ask about them.

If you buy it from us, it's worth the price

**DAIRY
FACTS**

BETTER BULLS ADD PROFITS

Associations Make Possible Improved
Sires at but Small Additional
Cost to Dairyman.

(Prepared by the United States Department of Agriculture.)
Two years ago a bull association was organized in Webster County, Mo.; and a year later another one in the adjoining counties of Wright and Douglas. The experience of these two associations illustrates the tendencies that such organizations display. A tabular comparison is given below, from which it will be noted that both organizations brought about a great reduction in the number of bulls needed. Before organizing, Webster county had 1 bull for every 17 cows, and Wright and Douglas counties 1 bull for every 29 cows; but in each locality after they got the association into operation they found 1 bull for every 50 cows was enough.

Another great change was in the value of the bulls. Before the bull associations were organized the bulls which the members owned were valued at \$75 each. After organizing, the bulls purchased and owned by the two associations were worth on the average about \$275 each, which is nearly four times as much as the privately owned bulls.

Yet the cost was not much greater per farm. When an individual owns a bull, the value of the bull and the amount of the investment are the same; but in a co-operative association each man pays only a part of the cost. The tabulation shows that the investment per farmer, that is, the average amount that each man had to pay was about one and a quarter times as much after the organization as it was before. In Webster county, and a little over twice as much in the Wright-Douglas association; but in both cases the value of the individual

A High-Producing Cow—The Result of Good Breeding.

bull was three and two-thirds times as much. It appears, therefore, that by a comparatively small additional investment the members of these two associations were able to secure very much more valuable bulls.

Both these Missouri associations seem to have considerable influence in encouraging their members to keep pure-bred cows. The Webster county association started with only 2 pure-bred cows, but in 1920 there were no fewer than 95. The Wright-Douglas association had no purebred cows at all when it began, but a year later it had 12, a change which, though small, shows progress and may lead to great results in the future.

Comparative Figures.

	Webster County Association, June, 1918	Wright-Douglas Association, Oct., 1919
Date of organization	June, 1918	Oct., 1919
Number of members at time of starting	21	26

Number of bulls owned by members before organizing	18	7
Number of bulls owned by association after organizing	6	4
Cows per bull before organizing	17	29
Cows per bull after organizing	50	50
Average value of bulls owned by members before organizing	\$75	\$75
Average value of bulls owned by association before organizing	\$43.71	\$20.19
Investment per farmer after organizing	\$63.46	\$42.31
Purebred cows at time of starting	2	0
Purebred cows at present	95	12

SUCCESS WITH YOUNG STOCK

Part of Constructive Benefits Lost by Failure to Properly Develop Animals.

To breed good dairy cattle and then fail to grow and develop them is to lose part of the benefits of constructive breeding. More beginners fail because they do not properly feed the stock they buy or breed, than fail from any other cause. Find the farmers who grow out their young stock and you will find men who are making a success in their animal husbandry enterprises.

MUCH BUTTER IS IMPORTED

Efficiency of Foreign Dairymen is Largely Responsible for Large Amount Coming Here.

The efficiency of the foreign dairymen is largely responsible for the vast amount of imported butter reaching this country. In Denmark the average cow's production is 220 pounds of butterfat a year. The average cow in this country is credited with less than 150 pounds.

POULTRY

DIFFERENT BREEDS OF HENS

Leghorns and Minorcas Are Best for Eggs, but Are Poor Sitters—Brahmas Best for Meat.

(Prepared by the United States Department of Agriculture.)

Chickens, for convenience, may be classified as egg breeds, meat breeds, general-purpose breeds, and fancy or ornamental breeds.

The egg breeds include the small or medium-sized fowls which are very active, quick to mature, producers of white-shelled eggs, usually nonsitters or at best poor sitters, and rather poor mothers, say poultry specialists of the United States Department of Agriculture. The varieties of Leghorns and Minorcas are good representatives of this class. Because they are poor sitters some other breed, or at least a few other fowls, should be kept if natural methods of incubation are to be employed. On account of their early maturity it is not uncommon for individuals of the egg breeds to begin laying at the age of four and one-half months. These breeds do not fatten as readily under ordinary conditions as the larger and less active breeds, and are rather sensitive to low temperature because of their large combs and wattles.

The largest fowls, represented in the meat class, are especially suitable for the production of large roasters. They are slow and somewhat sluggish in movement, have little desire for foraging, are easily confined by low fences, rather slow to mature, persistent sitters, and rather indifferent layers of brown-shelled eggs. Many poultrymen, however, are getting very fair egg yields from them. The Brahmans, Langshans and Cochins may be mentioned as belonging to this class.

The general purpose breeds include fowls which are of fair size and which will also produce a good quantity of brown-shelled eggs, making them especially adapted to the person wishing a supply of both eggs and meat. As one has to make frequent sales of flesh in the shape of surplus cockerels and hens, the carcass as well as egg production should be considered. The general-purpose breeds are usually good sitters and good mothers. They have medium-sized combs and wattles and endure cold weather well. They

Ideal Condition for Hen Flock is Free Range.

occupy a medium position between the egg and meat breeds as to size, egg production, and docility. The Plymouth Rocks, Wyandottes, Rhode Island Reds and Orpingtons are good representatives of this class.

DESTROY STICK-TIGHT FLEAS

It is Necessary to Clean and Spray Houses and Runs as Well as Treat the Fowls.

"Stick-tight" fleas breed in the cracks and crevices of brood and poultry houses; also in dry animal or vegetable refuse, but will not breed in damp or wet places; therefore, to get rid of them it is necessary to clean and spray the houses and runs thoroughly as well as treat the birds, say poultry specialists of the United States Department of Agriculture.

Grease the comb and wattles of the fowls and chicks with a preparation of kerosene and lard—one part kerosene to three parts of lard—being very careful not to use too much of the mixture or get any of it in the bird's eyes or on other places where it is not necessary. As it may cause injury if used too freely.

Clean and spray the coops and houses thoroughly the same as for poultry mites; also wet or spray the yards or runs, especially any dry soil about the poultry houses, such as dirt floors or the ground underneath a board floor, with a solution of salt and water, which helps to keep the ground moist and prevents the fleas from breeding.

PROPER MATING OF TURKEYS

Fifteen Hens to One Vigorous Tom is About Right—Males Will Fight Fiercely.

Fifteen turkey hens can safely be mated to a vigorous tom. If 25 or 30 hens are kept, two toms should not be allowed to run with them at the same time, but one should be confined one day and the other the next. When two toms are allowed to run together during the mating season they fight fiercely and the stronger does practically all the mating.

Transformations**

That you can make yourself
with paint, varnish or enamel

WE have established a service for women and men who want to do small jobs of interior painting, varnishing or refinishing of furniture, floors, bath rooms, walls, and bric-a-brac.

It's a free service. You simply tell us what you have to refinish, how finished now and what effect you want to get.

We tell you how to do it—in detail. What kind of material to use. What kind of brush. What method. Where to buy.

You can work transformations in home things that will surprise you. Old bedsteads, tables, chairs, woodwork, floors, bath tubs, etc. are old really, only on the surface. Paint, varnish or enamel them, and—they're new!

We make a special line of paints, varnishes, etc., for just this kind of home work—Fuller's "Home Service" Paint Products,—for you to use.

They dry perfectly, spread easily and smoothly, and give every desired result. You'll be surprised to learn what you can do—once you've used them.

Our experience with paints and painting practice goes back more than 72 years. We are one of the country's largest manufacturers. Our experts make a study of specifying paints for every kind of use.

Follow Fuller's "Home Service" Specifications, and you'll get the exact effects you're looking for.

Don't think you can't because you haven't done this kind of work before. Let Fuller products and Fuller service show you that you can.

Remember—don't allow surfaces to rot. It costs less to paint them.

Where to Buy

Important that you get the right material so be sure to go to the right store for Fuller products. Cut out coupon below as a memo to direct you.

Write us now—a post card—for complete catalog of Fuller's Specification "Home Service" Paint Products, which tells just what to buy for the work you have in mind. Send full description of, and get our free advice relative to refinishing furniture, chairs, bric-a-brac, basketry, etc.

FRUIT FOR AVERAGE FAMILY

Everbearing Strawberries Should Find Place in Every Garden Where There is Space.

Plenty of vegetables for the table should be the first consideration of every home gardener, but fruit trees and some bush fruit should be planted, say specialists of the United States Department of Agriculture. It does not take a very large space for growing enough fruit and berries of the different kinds to supply the average family.

Everbearing strawberries, which were a novelty a few years ago, are now being planted by thousands of gardeners, and they should find a place in every garden of the temperate region where space will permit. Strawberries, however, can be grown under a very wide range of climatic

and soil conditions. The same is true of the blackberry and the dewberry.

Raspberries are more limited as to distribution, and will not withstand the heat of summer in the South or the extreme cold of the North. Their planting is confined almost entirely to the temperate regions, the Central and Eastern states and the Pacific Northwest. Certain varieties of the red raspberry that are practically everbearing, or that at least produce both a summer and fall crop of fruit, are now being developed. Raspberries, blackberries, and dewberries do well when planted along a fence.

Bad to Dream of Jubilee.

To dream of being at a Jubilee allows that pretended friends are trying to do you an injury and that you will get the better of your difficulties. To the sailor, an unpleasant and stormy voyage.

DAIRY FACTS

BREEDER HELPS ASSOCIATION

Nebraska Dairyman Offers to Sell Purebred Sires at Half Price to Promote Quality.

(Prepared by the United States Department of Agriculture.)

Following the meeting of the Nebraska State Dairyman's association at Lincoln, Neb., recently, a prominent breeder from that state offered to provide bulls for a bull association at half their value, according to a representative of the dairy division, United States Department of Agriculture. Appreciating the value of the bull association in establishing a certain line

Unusually High-Producing Herd of Purebred Cows.

of breeding, this dairyman told a dairy extension specialist that when he formed a bull association he could choose the bulls from his herd, set a fair price on them, and he (the breeder) would cut that price in two.

This breeder has a large and unusually high-producing herd of purebred cows, the herd average being more than 18,000 pounds of milk a year. Offers of a similar character have been made by several other breeders in different sections of the United States, says the department specialist, all of which indicate that the value of the association plan as a means of improving the quality of dairy cattle is becoming more generally recognized.

When a bull association is formed one dairy breed, usually the one predominating in the locality, is selected for that association, and purebred bulls of that breed are used to improve the herds. As time goes on a number of good purebred and grade herds of the same breed are developed. When one breeder supplies a number of bulls to one association these bulls, generally of similar breeding, make it possible to concentrate the blood of certain families among 250 to 300 cows. Each bull is used in each block for two years. Thus the four or five bulls are used consecutively for eight or ten years, developing in one community a large number of dairy cattle of uniform type and breeding.

STUDY OF INDIVIDUAL COWS

Scale and Milk Record Sheet Give Feed Requirements and Other Characteristics.

The first great step with any dairyman in determining the true measure of his individual cows is taken when he begins to test or deal with his herd as individuals, and not just as a whole. Then he soon learns that he must own a scale and milk record sheet, and use his mind and his pencil to study the individual cow, her feed requirements and her other characteristics.

FOR BEST WORK WITH CHURN

Important Not to Have Too Much Cream in at a Time—Handle All Butter With Ladle.

To do the best work with the churn, do not have too much cream in at a time. A churn that is too full does not get all the butter out of the cream. So you lose, and lose heavily. No churn ought to be more than half full—less would be better. And then keep your hands off the butter. Handle it with the ladle.

KEEP MILK IN HOT WEATHER

Qualities Improved by Cleanliness of Cow, Milker and Especially of Pans and Pails.

Milk will keep fairly well in the hottest weather, provided the bacteria are excluded. This can be done by cleanliness of cow, bag, milker and especially of milk pails and milk cans. Pasteurization is still used to improve the keeping qualities of milk.

CLEANLINESS IS GREAT HELP

One Man Can Groom Two Cows Sufficiently in Minute to Remove Particles of Dirt.

Clean cows contribute to cleanliness of milk. With a stiff brush one man can sufficiently groom two cows a minute. If a currycomb is used, take one on which the points have been worn down, so they will not be too severe on the cows.

HOME GARDENING IS FASCINATING

Becomes Sport When There Is Rivalry With Neighbors for Fresh Vegetables.

ENJOYED BY ENTIRE FAMILY

Getting an Early Start by Indoor Propagation Will Help Gardener—Some Suggestions for Getting Ahead of Jack Frost.

(Prepared by the United States Department of Agriculture.)

Gardening can be made a very interesting game with many of the features of friendly competition which make golf, tennis and other summer sports so fascinating to many people. Like these sports, skill and practice increase the probability of winning honors, but unlike them it is remunerative and is enjoyed by the entire family, who can take part in the garden work and enjoy eating the vegetables produced.

Gardening becomes a contest or game when there is rivalry between neighbors to see who has the first mess of peas or the first ripe tomatoes, or who can raise the largest potatoes or melons. There is a pride, too, in having some prize product exhibited in the window of the local store or seeing a notice of some accomplishment published in the home newspaper.

Beating Jack Frost.

To those who enter the game of gardening and covet the honor of having the first ripe vegetables, gardening specialists of the United States Department of Agriculture offer some suggestions for beating Jack Frost and getting garden operations in motion before the open season for plants.

At least four weeks' time can be saved, specialists say, for many crops, like tomatoes and cabbage, by starting the plants in the house. If operations are to be conducted on a small scale, two or three cigar boxes filled with soil and placed in a south window furnish a seed bed for starting a few plants. For most home gardeners a more desirable seed bed can be made by placing good soil in a flat tray three inches deep and of convenient size to fit in a well-lighted window with southern exposure. A little care will be necessary in keeping the tray properly watered.

All garden plants are dependent upon light for growth, and when started in the window immediately begin to turn their heads toward the light. To overcome this the box in which they are grown should be turned

Preparing Box for Early Spring Planting.

around each day. Out of doors they get the light from all sides, but in the window they get it from only one side.

Transplanting the Seedlings.

When the seedling plants are big enough to handle—that is, when they have formed about two leaves in addition to their seed leaves—other boxes of soil should be provided and the plants transplanted about two inches apart each way to give them plenty of room. More window space must be provided, and it may be necessary to build a stage and support one box above another. The same precautions as to watering and turning to get uniform light will be necessary. On warm days the boxes can be put outdoors.

When it comes to planting in the garden, the plants grown in boxes are cut apart with a cube of soil around the roots of each. Those grown in pots are jarred loose, turning the head of the plant downward with the stem of the plant between the first and second fingers of the left hand. Where tin cans without bottoms are used, the ball of earth is pushed nearly out of the can. The plant is then set with the can sticking up around it as protection against cutworms. After a week or two the can is lifted over the top of the plant. This practice is being extensively followed by commercial gardeners in certain sections, who by the aid of one of the little can-sealing machines now on the market cut off the tops and the bottoms of thousands of discarded empty cans for use in transplanting plants. Some gardeners dip the cans in a thin solution of shellac to keep them from rusting.

One way of extending the garden season and getting ahead of neighboring gardeners is by starting several early crops in a hotbed. In addition to starting plants, the hotbed is useful for growing a few early vegetables for the table.

BURN CHINCH BUG NESTS

Chinch bugs have made their appearance in certain parts of the United States.

One chinch bug destroyed now may prevent the production of hundreds to infest your wheat field later.

Chinch bugs pass the winter and early spring in wild grass and leaves, especially along hedges and fences and in the edges of woodlands adjoining cultivated fields.

Burn grasses, leaves and other trash where the bugs may have found winter refuge. The bugs not burned will be killed by exposure to the weather.

Clean up all trash and rubbish which may harbor the insects in winter.

IMPORTANT GRAIN SORGHUMS

Dwarf and Early Varieties Are Best for Higher and Drier Districts—Essential Hints.

The more important grain sorghums are included in two groups of varieties, the kafir group and the milodurra group. Dwarf and early varieties in both groups are best for the higher and drier districts. The use of good seed of adapted varieties, a well-prepared seedbed, clean cultivation, and the right method of handling after harvest will increase the yield and quality of the grain.

EXCELLENT FOR LAND'S SAKE

Where Sweet Clover Does Not Thrive Well an Application of Limestone Is Favored.

Sweet clover is an excellent plant to grow for the land's sake under many conditions, and where it does not grow well now it can be made to grow well by applying ground limestone to the soil. It will add humus and nitrogen to the soil rapidly when plowed under, thereby increasing the fertility of the soil in these essential factors.

Improve Fire Hose Coupling.

Couplings for fire hose that are tightly locked by a quarter turn have been invented by a Massachusetts man.

Summons

In the District Court, Second Judicial of the State Idaho, in and for the County of Latah.

Edgar L. Latta, Plaintiff.

vs.
Lillian Mae Latta, Defendant.

The State of Idaho Sends Greeting To Lillian Mae Latta, the above named defendant.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah, by the above named plaintiff, of the nature in general terms as follows: To procure a decree of divorce from the said defendant on the grounds of cruel and inhuman treatment.

And you are hereby directed to appear and answer the said complaint within twenty days of the service of this summons, if served within said Judicial District, and within forty days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgement against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in and for Latah County, this 19th day of April, A. D. 1921.

(Seal) Homer E. Estes, Clerk.

TURKEYS INCREASE IN SIZE
Standard Weight of Bronze Variety Brought Up to About 25 Pounds for Young Toms.

By judicious breeding, turkeys have increased markedly in size since domestication. The wild turkeys of today average in weight about 12 pounds for young toms and eight pounds for young hens, while the standard weight for the Bronze variety is 25 pounds for young toms and 16 pounds for young hens.

WATCH HATCHING DUCK EGGS
Care Must Be Taken That Empty Shells Do Not Telescope Over Eggs Just Pipped.

When hatching duck eggs under a hen, watch the eggs while ducklings are hatching and remove empty shells from the nest at once. Sometimes empty shells telescope over eggs just pipped, causing the death of the unhatched duckling. If the hen is at all nervous and inclined to tramp on the ducklings, it is well to remove them as soon as hatched to a warm lined basket until all are hatched.

Cacophonous.
The laugh at one's own expense can hardly be called a musical laugh.—Boston Transcript.

BETTER PRODUCTION AND BIGGER PROFITS FOR GROWERS OF WOOL

Keeping the Fleece Intact is One of the Things Graders for Co-Operative Pools Have Emphasized With the Growers.

(Prepared by the United States Department of Agriculture.)
They are being "shown" down in Missouri—and they like it.

For the first time the wool growers of that state have been marketing their wool co-operatively, and the plan is proving a great success. At 70 centralization points the wool has been brought in from the country for pooling. All told, several thousand growers have shared in the big co-operative movement and wool amounting to millions of pounds has been handled. In each case it has been graded as the growers brought it in, an expert grader supplied to the bureau of markets, United States Department of Agriculture, classifying the fleeces. The work of the grader is part of an investigation being carried on by the bureau in connection with a study of the tentative wool grades which the Department of Agriculture has recently established.

It isn't so much the immediate increase in money returns resulting from co-operative marketing that interests these growers—although they promise to fare as well or better than the average in this year's market, which is far from normal—but it is the benefit they expect to derive next year and the years following from their experience of this season.

The "showing" in Missouri—and elsewhere—has consisted in demonstrating the value of grading as carried on under the co-operative plan. The growers have been quick to see their mistakes and propose not to repeat them. As a result, the entire wool industry is to profit, by a general raising of standards among the growers.

Amazing Variety of Wrappers.
The seemingly incidental—but really very important—matter of wrapping the fleece illustrates the benefits of co-operative wool marketing. One of the regulations which must be observed, if the wool grower is to suffer no penalty when his wool is graded, is that each fleece shall be wrapped in paper twine or a hard-glazed twine. If other twine is used fibers from it are almost sure to become mixed into the wool and may cause serious trouble in the spinning machinery, or if these fibers are woven into fabric they become, conspicuous owing to the fact that they take the dye differently than the wool fibers. This often results in the cloth having such defects as to be almost worthless.

Many wool growers had never understood this until it was explained to them by the grader, consequently some of the lots of wool brought into the warehouses were done up in ways that would have been amusing had it not meant considerable financial loss to the uninformed growers. Some used binder twine and sisal, others bark, smooth wire, and barbed wire, and still others cotton rags torn in strips. The majority, of course, had their fleeces tied with the proper materials.

Incidentally the bureau of markets explains that Missouri is not alone in the matter of being "shown," since wool growers in all sections of the country have discovered that they have been following practices that often seriously penalized them.

"No More Wet Wool for Me."

But the use of proper wrapping material is not the only thing which the co-operative wool growers are learning. "Shear the sheep when the wool is absolutely dry," say the Department of Agriculture and wool experts everywhere. But many growers apparently do not know of this requirement. One grader in Missouri was amazed to find all of the wool in a certain lot thoroughly soaked. Pressed for an explanation the grower admitted that he did not know that moisture made any difference in the grade, but realized that moisture added to the weight. When asked how he could account for the condition of his fleece, he admitted that he had allowed his load of wool to stand in the creek all night. When he discovered that this was responsible for his wool being rejected he took the decision smilingly and with a "Never again!" drove away.

Burs Cause Trouble.
One class of "rejects" in wool grading is known as "burs." Many farmers have become indignant when some

of their fleeces were thrown into the burry class. But in each case the grader has been able to show them by careful examination that the condemned fleeces contained large numbers of burs—sometimes 50 or 60. Every such experience has sent the grower back to his farm resolved to "clean up those burs." "Next year you'll see an improvement in my wool," more than one man has told the grader.

It is experiences like these that are making wool growers in many sections of the country realize that they have not been getting the full returns for their product. They see that the co-operative system not only lessens the cost of handling, and so benefits both buyer and seller, but that the grading which is an essential feature of the system permits them to better meet market demands. "It is a case of 'how, when, and where,'" say the marketing specialists. The system which has had such a promising beginning in Missouri and other states enables the producer to grow the kind of wool most desired and to sell it in the form desired; it enables him to hold his wool until the best marketing time arrives, and through a large organization he is able to sell his wool to the buyer who makes the most satisfactory offer. He is not at the mercy of any one buyer.

The bureau of markets is prepared to furnish information to any person interested in learning more about co-operative wool marketing as well as co-operative marketing in numerous other fields in which success has been equally pronounced.

ACCOUNT OF FARM BUSINESS

Memorandum of Various Items Will Prove Valuable When Calculating Profit and Loss

In making a record of the farm business, the item of labor income cannot be determined accurately without some system of accounting. Some farmers will require accounts showing the amounts expended for labor, others on the amount paid for feed, and still others on the amount received for crops sold. A memorandum of such items will prove valuable when the time comes to calculate the year's business. The matter of farm accounting, according to the specialists who have studied the problem for the United States Department of Agriculture, is not dependent upon any particular form or blank book—the real secret of success lies in knowing what accounts to keep and how to make use of them. Farmer's Bulletin 661 suggests the sort of accounts most needed.

RULE FOR BORROWING MONEY

Farmer Should Make Sure That Purpose Will Return Greater Return Than the Debt.

Farm credit is a good agency in the hands of those farmers who know how to use it, but it is a dangerous element of farm business if its nature and purpose is not fully understood. An unproductive enterprise is not a safe basis on which to borrow money under any conditions. It is more important that the enterprise shall be productive than that the rate of interest at which one can borrow money be high or low. Farm-credit specialists of the United States Department of Agriculture lay down one essential rule to be followed by the farmer who proposes to borrow money: Make sure that the purpose for which the borrowed money is to be used will produce a return greater than is needed to pay the debt.

DRILLING RYE FOR PASTURE

Practice Not Generally Followed Because of Poor Results—Fallen Corn Often Impedes.

Theoretically, the drilling of rye in corn for late fall and early spring pasture should give very good results. But as a matter of practice this plan is very little followed. Perhaps it is because the corn is often times down so badly that drilling is difficult.

New Goods

SHOES: A shipment of men's and boys' work shoes direct from the factory. Prices are surprisingly low. Good serviceable shoes \$2.75 a pair and up.

SHIRTS: Men's and boys' soft collar dress shirts in plain white and fancy striped.

LAMPS: Large size glass bowl sewing lamps with No. 2 burners.

BRUSHES: A large assortment of vegetable and scrub brushes, 15c each and up.

Our cash discount proposition appeals particularly to those who pay as they go and never avail themselves of the convenience of a charge account. They save pennies, dimes and dollars by spending their cash here where their purchases pay them dividends.

Stanton Bros.

UNIFORM PRODUCTS FAVORED

Find Better Market, Bring Higher Prices and Are Handled at Less Expense Than Others.

Without uniform standards for farm produce there is no recognized basis for the business of buying and selling, says the bureau of markets, United States Department of Agriculture. Standardization of products gives seller and purchaser a common language and a set quality upon which prices may be compared and fixed. Experience has shown that the products which are sold by grade find a better market, bring better prices, and can be handled at less expense than those sold without reference to standards. Standards have already been fixed for many farm commodities, such as American Upland cotton, shelled corn, wheat, oats, and for small fruit containers. These Federal standards apply only when the product is intended for interstate or foreign commerce. It is highly important to secure state cooperation so that the provisions that apply to a few products will apply to all that are offered for sale.

Revolutionary Army Uniform.
At the close of the Revolutionary war the uniforms of the American troops retained in service closely followed the French, that of the infantry being blue faced with white, and the artillery blue faced with red. At that time these were the only two arms in the composition of the army. Later cavalry was added, wearing green coats with white facings, which soon after changed to black. Since that time the uniforms of the army can be divided into periods, each of which dates back to the close of one of the wars.

Literal Youngster.
Jack was being taught by his religious mother some things she thought he ought to know. Among other subjects God and His omnipresence were spoken of. It seemed hard to the boy to think God could be everywhere at once and especially disturbing to find out that He was dwelling inside him. The little fellow, however, took his mother at her word, and soon after at the supper table, as he was about to partake of some hot soup, said: "Look out, God, there's some hot soup comin'."

News Items of Local Interest

I. B. Beekley, father of Mrs. George Shind and a former resident of Kendrick, died at his home in Prosser, Wash., last Saturday, from the effect of heart disease. His wife and daughter, Mrs. Lawrence, were with him at the time of his death. Mrs. Shind did not receive the message of his serious illness until too late to reach his bedside before death came.

Several cases of smallpox in and around Kendrick have been reported. There is one case in town but no other cases have developed and as a strict quarantine is being observed little uneasiness is being felt that the disease will spread.

Mrs. R. F. Bigham went to Troy, Thursday morning, to visit her son, Robert.

M. Bleck has been quite ill this week. He was confined to his bed the first part of the week but was able to be up yesterday.

At a special election at Pullman last Saturday a proposed 7-mill tax levy for school maintenance was voted down. Members of the school board stated that the money available without the 7 mill tax would be barely sufficient to operate the grades alone with no funds left for high school. Unless a second election is held they state it will be necessary to close part of the school next year.

Mrs. Mina Davidson and little son, of Clarkston, arrived Tuesday afternoon to visit friends here.

A number of local Odd Fellows attended a meeting of the lodge at Juliaetta Monday night.

The Kamiah progress of last week in summarizing the bank situation at that place says that after making out a statement of the good assets of the bank and setting opposite the liabilities of the institution, the examiner estimates an approximate dividend to the depositors of 5 1/2 per cent. Allowing for a salvage from the doubtful and bad assets to be realized within a year or so may add another 20 per cent to the dividend but the figure is only estimated. It may be less and under some conditions might be more.

A. W. Perryman was not able to be at his place of business, the first of the week on account of illness.

Some of the young folks in Kendrick are indulging in the practice of stealing flowers. This is a bad habit to acquire and it sometimes ends in grief.

The Okoke Kloothman Club met at the home of Mrs. R. D. Newton, Thursday evening.

Over \$50,000 in Liberty Bonds and more than \$800 in cash was stolen from the vault at the Indian Agency at Lapwai the first of the week. The money was the property of Indians.

L. N. B. Anderson, well known throughout the state, died at his home in Oregon last week. He was county superintendent of Latah county for some time and also served as state superintendent of public instruction in Idaho, a good many years ago.

Juliaetta has secured the Radcliffe Chautauqua which will appear there June 17th to 21st inclusive.

Charles McKeever says there is an ice mine near Kendrick, located in Bear Creek canyon. Picnickers have taken cream, the necessary ingredients and a freezer to this favored spot on a hot day and made ice cream with ice dug from the mine. No one has ever offered an explanation regarding the ice mine, but it is there every summer.

Della Riffin underwent an operation for the removal of an abscess in her side, Wednesday. The operation was performed by Dr. Rothwell and was very successful.

Mr. and Mrs. Stuart Compton and children left yesterday for Peck where they will make their home. Mr. Compton is manager of the Peck Hardware Company.

The Ladies Aid of the Presbyterian church met at the home of Mrs. A. V. Dunkle, Wednesday afternoon.

Wm. Rogers had the interior of his barber shop kalsomined and painted. It now presents a very neat appearance.

Mr. LaQuime of the Continental Oil Co., of Lewiston was in Kendrick the first of the week making arrangements for the installation of the oil station here. He stated that he expected construction work to start in the very near future and that it would be rushed to completion as the Company is anxious to serve its patrons here as early as possible. The oil station will be a great asset to the Potlatch community and the people are pleased to have it come to Kendrick. A section of Railroad Street between Lots 8 and 10, Block 8, and the railroad right-of-way will be vacated and sold to the Company.

Word comes from Spokane that G. G. Oldfield has sold his jewelry business there and has taken the agency for Spokane county of one of the latest type electric washers.

Harry Benscoter of American ridge went to Clarkston last Saturday to visit relatives.

Miss Linda Hamley of Spokane arrived the first of the week to visit friends here.

A ball game will be played between Orofino and Kendrick here Sunday afternoon. Orofino won against Juliaetta last Sunday by a score of 9 to 8. Kendrick's team showed up well in the game against Ahstka last Sunday and an even stronger lineup for the locals will be on deck for the coming game.

Wanted: Stock to pasture; fine tame grass, lots of water and salt furnished. Horses \$2.00; cattle \$1.50 per month. W. M. Blenden, Bear Ridge. 20-3t

Attorney G. G. Pickett of Moscow was transacting business in Kendrick Wednesday. Mr. Pickett is attorney for the town of Kendrick.

Sophia Bartroff, who with her family lived on American ridge a number of years ago, died at Albion, Wash., Sunday, at the home of her sister, Clara. No particulars regarding her death have been received here.

E. W. Lutz attended a bankers' convention at Spokane last Saturday.

George Carlson, Bob Brown, Raymond Snyder, John Halseth and Louie Pearson drove to Lewiston Wednesday evening to take in the circus.

The Sunday schools of the Upper Potlatch country will hold a picnic near the Steele school house on Big Bear ridge Tuesday, June 14. Prominent speakers will be present and a very interesting program is being arranged.

There will be a meeting of the guarantors of the Kendrick chautauqua at the town hall tonight (Friday). A representative of the chautauqua company will be present to help outline plans to further the success of the chautauqua which will be given here June 15th to 19th inclusive.

George E. Knepper of Boise visited his son in Kendrick the first of the week. He is Grand Secretary of the Masonic Lodge of Idaho, and while here visited the local lodge at a special meeting Monday night. Degree work and a splendid banquet were the features of the evening. The banquet was served by Mr. and Mrs. N. Brocke and Mrs. John Brocke.

W. M. McCrea was in Moscow the first of the week on business.

W. W. Wilcox of Clarkston was in Kendrick the first of the week looking after property interests.

N. Brocke, road boss for the American ridge district, said that more rock had been moved on the Brady gulch grade this summer than for the past ten years. Some splendid work has been done on this grade. It has been widened so that there are few places where vehicles cannot pass with room to spare. Mr. Brocke says that the same amount of work put on the grade next year with the big tractor and grader will practically put it in shape for surfacing with crushed rock.

Miss Bertina Forest returned home Thursday from Spokane, where she has spent the past eight months.

Miss Bessie May is staying with Mrs. Ed Halseth.

Mr. and Mrs. A. Galloway and daughter, Miss Mary, were Sunday visitors at the Chas. Bower's home.

Mr. and Mrs. Einar Bruseth of Spokane are visiting at the Ole Lien home.

Miss Claribel Ingle came up from Clarkston to spend Sunday with her folks.

Mr. and Mrs. Lewis Aas and daughters, of Deary, spent Sunday at the Ed Lien home.

Mrs. Otto Alber and daughter returned home from Moscow last week.

Mrs. O. E. MacPherson and son, Mrs. Stuart Compton and two children, were visiting their parents, Mr. and Mrs. N. E. Ware, last week.

Preaching services at the Lutheran church, Sunday, May 22nd, at 11 a. m., by Rev. P. Hesby of Deary.

Mrs. M. L. McGraw's brother is seriously ill at the McGraw home on Texas ridge.

Thorvald Nelson was a Spokane visitor the first of the week.

Teakean and Cavendish

Mr. and Mrs. Ed King from Orofino was up visiting their daughter, Mrs. Helmut Petersen, Sunday.

Miss Theresa and Josephine Baken closed their school Friday, May 13, after a successful term of school.

They have been engaged to teach here next year.

There was a party at the E. Kelley home Friday night. Those present were, Theresa and Josephine Baken, Joseph and Jack Frucht, Teddie and Lloyd Vanarsdale, Annie Groseclose, Mrs. J. C. Petersen, Marguerite, Carrie and Eli Petersen, Orval and Cecil Choate, Mrs. L. Garrison, Percy and Cecil Garrison and Albert Harp. All reported a very enjoyable time.

Those visiting at the J. C. Petersen home Sunday, were Mr. and Mrs. Ed King of Orofino, Mr. and Mrs. Helmut Petersen. Mr. and Mrs. Baker and daughter, Loera, Mr. Eldred, Jack Frucht and Harold and Myrtle Kelley. All reported a very enjoyable time.

Miss Alma O'Hara closed her school Friday, May 6th, after a successful term. She is expected back again next year to teach the same school.

Mr. Will Reece has moved to the Teakean neighborhood, near the sawmill, where he is intending to haul lumber this summer.

Miss Alma O'Hara has been visiting friends in this neighborhood before returning to her home in Orofino.

Miss Theresa and Josephine Baken left for Moscow last Sunday, where they will spend their vacation.

FOR AMATEUR POULTRY-MEN.

- Don't allow vermin among the flock.
- Don't allow layers to become chilled.
- Don't feed unbalanced rations.
- Don't overcrowd the birds.
- Don't neglect to feed an abundance of green stuff.
- Don't neglect to cull continually.
- Don't feed spoiled grain.
- Don't sell dirty or old eggs.
- Don't allow the male birds to run with the hens during the winter.
- Don't allow too many females with the male bird during the mating season.
