Foreign Advertising Representative THE AMERICAN PRESS ASSOCIATION

Even when a constant knocker tells the truth it doesn't carry much weight.

A good definition for co-operation is—getting your ad. change to the Gazette office Wednesday morning.

A diplomat is an individual who talks all around a subject but is never trapped into making a definite statement.

It's an ill wind that blows nothing good for anybody. These horrible grades into endrick cause the traveling men to patronize Kendrick garages most generously.

It would be very interesting for each one of the big ridges in the vicinity of Kendrick to be represented in the Fourth of July parade here with a float of some kind. If each ridge had a float in the parade it would help greatly to make it a success and also to stimulate interest in the event. All it takes is a leader from each ridge to start the good work.

Texas Ridge

A great many Texas ridgers attended the Sunday school picnic on Big Bear ridge Sunday. All report a good time and splendid program.

There was a large crowd at the "barn dance" given Saturday night at the Frank Bailey barn.

Elsie and Lulu Weber attended the chautauqua in Bovill.

Mr. Randall of Juliaetta visited at the Frantzieh home Saturday and Sunday and left Monday for Bovill to visit his son, DeLars, who is a brakeman at that point.

Mrs. Mike Knudson and three little sons of Potlatch, Idaho, are visiting at the L. K. Dahlgren home.

Bliss Drury is on the sick list this week with an attack of tonsillitis.

Mrs. Ella Stevens of Kendrick is visiting her sister, Mrs. Chas. Dahlgren.

Mrs. Dahlgren, Mrs. Knutson and Mrs. Frantzieh were Sunday callers of Mrs. Chris Beyer.

The strawberries are ripening fast and shipping will soon start from this point. The patches look promising for a large crop. Some of those with large acreage are Albert Pierce, John Adams, Nestor and Fritz Olson and J. M. Moore.

Leland Items

R. B. Parks and son, Hugh, drove to Spokane, Wednesday.

Mrs. A. H. Smith underwent an operation at a Moscow hospital last Saturday. Last report was that she is getting along nicely.

Mr. and Mrs. Jesse Hoffman are visiting relatives in Spokane and Cheney a few days this week.

Arthur Locke went to Moscow Sunday, returning Monday, walking straighter than ever if possible and reported a new baby girl in his family, born at Moscow Sunday.

R. M. Smith and family drove to Moscow Saturday to see Mrs. A. H. Smith, then on to Palouse in the

evening where they stayed over night, returning the following evening.

Mr. Dewinter and little daughter Marie were Lewiston passengers Tuesday.

Mrs. Collingwood of Agatha has been a guest at the Winegardner home for the past week.

The Ladies' Missionary society gave an ice cream social last Saturday evening, the profits amounting to \$36.00.

Mr. and Mrs. William Hamilton and children visited at the Oral Craig home over Sunday.

There were five persons baptized by immersion in the creek below the bridge at Juliaetta Sunday at 3 p. m. by Rev. Hall, the pastor.

R. M. Smith, who is helping with the carpenter work on the new school building, was injured Wednesday by lumber falling on his foot.

C. Huff was on the ridge Wednesday.

The ladies met Wednesday with Mrs. George Frederickson for work. There were ten present. Not having work to keep them busy for all day, they visited and enjoyed a

lovely dinner served by the hostess and had a good time in general. Mrs. McCall, the next time you have the ladies work for you just remember what a band of workers they are and have enough to keep them busy.

Mrs. Clyde McGhee is visiting on the ridge.

Mr. and Mrs. Chas. Larson and Mr. and Mrs. Wesley Hartinger left Wednesday for Fernie, B. C., to visit relatives. The trip is being made in a car.

DAIRY FACTS

BUTTER FROM SWEET CREAM Because of Its Better Keeping Qualities Larger Use of It Is Urged by Dairy Division.

(Prepared by the United States Department of Agriculture.) The dairy division, United States Department of Agriculture, advises a larger use of sweet cream butter, because of its better keeping quality.

The United States navy is a large consumer of this kind of butter, made according to the navy specifications from unripened or sweet cream, instead of from the cream ripened to sourness, of which most creamery butter is made. For several years past it has been the practice of the Navy department to contract for butter made of sweet cream in large amounts to supply the officers and sailors. This butter is packed under the supervision of the dairy division of the United States Department of Agriculture. During the war, the personnel of the navy being enlarged, a much greater quantity of butter was needed.

The principal reason the navy desires sweet cream butter is that it keeps better. As the larger part of the butter supply is made during the summer months, it is necessary to put some of it in cold storage in order to have enough for winter, and in the course of time it develops various more or less undesirable flavors, due to long storage. Butter made from sweet cream does not develop such flavors for a much longer time, if at all. Many months after it has been made it is equal to fresh butter, provided it has been kept under proper

Inspecting Butter. conditions; hence sweet cream butter is especially suitable for shipping to distant countries, and for long voyages. Sweet cream butter is gradually coming into wider favor in the domestic market, the Department of Agriculture says, because some consumers prefer it. It has not so pronounced a flavor as ordinary butter, but it has a mild creamy flavor.

USE RIPE SEEDS TO START TREES

Few Varieties of Seed Such as Elm, Maple, Willow and Poplar Ripen in Spring.

LOAMY SOIL IS PREFERRED

Proximity to Farm Dwelling Is Desirable Because Rodents Are Not Abundant—Transplant Seedlings When Ten Inches High.

(Prepared by the United States Department of Agriculture.)

Perhaps the cheapest and frequently the best way to start a forest plantation is to collect seed from hardwood trees and grow seedlings, say forest specialists of the United States Department of Agriculture in Farmers' Bulletin 1123, Growing and Planting Hardwood Seedlings on the Farm, just published by the department. The collected seed, says the bulletin, will be fresh and the seedlings grown from it should be thoroughly acclimated so far as climate is concerned.

Should Be Collected in Autumn.

Seed should not be collected before they are ripe, and this means for most kinds of seed that the work should be done during autumn, usually after frost. Collecting may be extended into the winter for such species as ash, catalpa, honey locust, sycamore and others which retain the seed on the trees until that time. A few varieties of seed, such as elm, silver maple, red maple, willow and poplar ripen during the spring and summer and should be gathered promptly before they are scattered.

Middle-aged trees growing in the open, where they have been permitted to develop broad, spreading crowns, ordinarily produce seed in greater abundance than trees growing in a dense forest. The fruit of some hardwood trees requires special treatment to separate the seed from the fleshy covering, pod or hull before they are planted.

The best time to sow seed, either in the nursery or in the permanent planting site, is soon after it is ripe, but when this is not possible the seed must be stored until spring. If this is done, the seed must not be allowed to dry out excessively, because this impairs its power to germinate. Seed should be stored in a cold place.

Loamy Soil Preferable.

When the seed are to be planted a good, well-drained, preferably loamy soil should be selected. Proximity to the farm dwelling is desirable, because rodents are less likely to be abundant there. Preparation of the seed bed should be similar to that of getting the soil ready for a vegetable crop. Except on commercial plantings, where the seed are sometimes sown broadcast, it is best to plant with a drill in rows sufficiently far

Well-Managed Timber Stand Is Source of Fuel and Shelters Farmstead From Severe Winter Winds.

apart to permit horse cultivation. With small or thin seed, such as that of birch, elm or sycamore, best results will be obtained by sowing broadcast rather thickly over the beds, pressing the seed into the loose soil with a board and covering it very lightly with soil and a light mulch of leaves or straw. When the seedlings are ten or more inches in height they are large enough to be transplanted to the field. Most of them reach this size in one growing season. In digging them care should be taken to injure the roots as little as possible. Injured portions of the roots should be cut off with a sharp knife. The seedlings should not be dug until the time for planting them in their permanent location, for exposure of the roots to the air for any length of time will kill them.

GROW SOY BEANS WITH CORN

Combination Will Produce Larger Amount of Dry Matter Per Acre Than Corn Alone.

There is a decided advantage in growing soy beans with corn for silage purposes. The combination will produce a larger amount of dry matter per acre than corn alone, and the beans, being rich in protein, help materially in improving the feeding value of the silage. Less high-priced oil meal or cottonseed meal will be needed to balance the ration when the silage contains a good proportion of soy beans.

FARM POULTRY

AIM FOR HEALTH AND VIGOR

Appearance and Action Taken Together Are Fairly Reliable Guide for Selection.

Only by continuous selection for health and vigor is it possible to build up a flock that will produce fertile eggs, strong chicks capable of making quick growth, and pullets with sufficient stamina to withstand the strain of heavy egg production. The appearance of a bird is not always a sure indication of its vigor, but appearance and action taken together are a fairly reliable guide for picking out vigorous birds, say poultry specialists of the United States Department of Agriculture.

The comb, face, and wattles should have a good, bright color; the eyes should be bright and fairly prominent, and the head should be comparatively broad and short, having a fairly short, well-curved beak and showing no tendency to be long "snaky," or "crow-headed."

The bird should be alert and have a strong, vigorous carriage; the legs

Single Comb White Leghorn Cockerel—One of Foundation Birds Used at Government Poultry Farm, Beltsville, Md.

should be set well apart and strongly support the body, giving no indication of weakness or a knock-kneed condition. The bone, as seen in the shank, should be strong and not too fine for the breed, while the toes should be strong, straight, and not too long. The plumage should be clean and smooth, as a lack of condition often accompanies soiled, roughened plumage. The condition of flesh should be good, as a very thin bird is usually in poor health. Sick fowls, or fowls that have apparently recovered from sickness, should never be used for breeding if it can be avoided.

FEEDS FOR GROWING CHICKS

In Addition to Grains Growth of Young Fowl Can Be Hastened by Supplying Milk.

As soon as chickens will eat whole wheat, cracked corn, and other grains, the small-sized chick feed can be eliminated. In addition to the above feeds the chickens' growth can be hastened if they are given sour milk, skim milk, or buttermilk to drink.

Growing chickens kept on a good range may be given all their feed in a hopper, mixing two parts by weight of cracked corn with one part of wheat, or equal parts of cracked corn, wheat and oats in one hopper, and the dry mash in another. The beef scrap may be left out of the dry mash and fed in a separate hopper, so that the chickens can eat all of this feed they desire. If the beef scrap is to be fed separately it is advisable to wait until the chicks are 10 days old, the poultry division of the United States Department of Agriculture advises, although many poultrymen put the beef scrap before the young chickens at the start without bad results.

Chickens confined to small yards should always be supplied with green feed. Fine charcoal, grit and oyster shell should be kept before the chickens at all times, and cracked or ground bone may be fed where the chickens are kept in small, bare yards, but the latter feed is not necessary for chickens that have a good range.

LOSSES FROM FERTILE EGGS

Table Given by Department of Agriculture Shows Infertile Product Is Superior.

The following table, compiled by the United States Department of Agriculture, shows that the losses of fertile eggs are computed to be nearly twice as great as of infertile eggs:

	Fertile Eggs	Infertile Eggs
On the farm	29.0	15.5
At country store	7.1	4.6
Transportation to packing house	6.4	4.7
Total	42.5	24.8

LOCATION FOR BROOD COOPS

Should Be Placed on Spot Where Grass Is Green and Tender and Removed Frequently.

Brood coops with runs should be placed on ground where the grass is green and tender, and, as fast as it is eaten off, the coop and run should be moved to a place where the grass is plentiful, say specialists of the United States Department of Agriculture.

WELL-KEPT DIARY IS VALUABLE TO FARMER

Profit Gained From Record of Daily Happenings.

Many Farm Problems Encountered Every Year That Might Be Solved More Easily if History of Property Was Handy.

(Prepared by the United States Department of Agriculture.)

A well-kept diary is the most interesting and valuable volume in its owner's library. For the farmer, the diary will preserve a record of farm happenings and personal experiences which will be valuable in the future conduct of his business. If, when he finds his alfalfa field swarming with grasshoppers, he can look back in his diary to a summer ten years before and find the poison-bait formula that controlled the insect then, he will save much valuable time. He may wish to know the exact location of a tile drain that was laid down when he was a youngster. If the event was noted in his own, or his father's diary, a ten-minute perusal will give him more definite information than a day's digging with a spade. There are dozens of farm problems encountered every year that might be solved more

Preserve Farm Records—They May Prove Valuable.

easily if the farmer had access to a complete chronological history of his property.

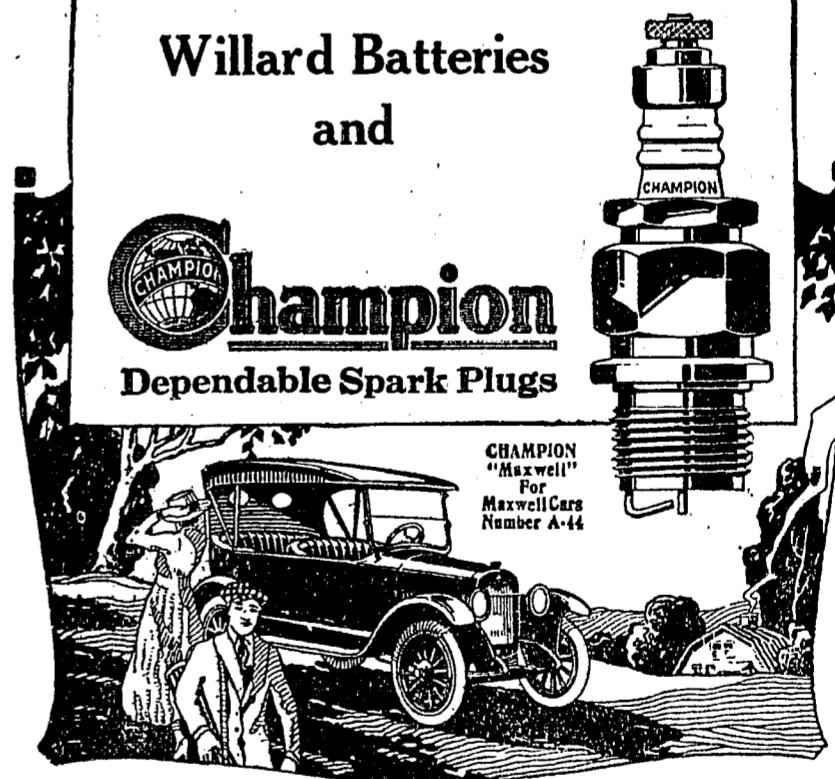

The diary may be given a prominent place in the bookkeeping records of the farm business. Generally speaking, there are three purposes to be served by farm accounts:

(1) To determine the farm invest-

Fisk Tires and Lee Tires
Overland Service

Willard Batteries
and

Champion
Dependable Spark Plugs

Kendrick Garage Company

ment, receipts, expenses, and the net income of the business.

(2) To furnish the net returns from any individual farm enterprise and to supply specific information as to its details.

(3) To obtain a memorandum of what other people owe you and what you owe them.

The blank forms necessary for a simple accounting system can be worked out by the farmer himself, or he can apply a system recommended by his county agent. He also can obtain information direct from the office of farm management and farm economics, United States Department of Agriculture. The chief advantage of a farm accounting system, which is a part of the farm diary, is in the additional interest furnished by the personal items. The diary supplies items of supplementary interest which usually are left out of the accounts. Without the diary the task of keeping the books of the farm business becomes dry and uninteresting. Only persistence and practice will make one an adept at writing a diary.

WASHING AND RINSING CANS

Much of Deterioration of Milk Supply Is Due to Contamination in Big Receptacles.

Much milk that is good, when it leaves the stable is poor milk when it reaches the city dairy plant. The deterioration is due to contamination in the cans. In almost all cases the city dairy plants wash and sterilize the cans that they return to the farmers. The farmers, assuming that the cans are clean, fill them and return without further attention. As a matter of fact, the washing is usually well done in a city milk plant. After the sterilizing with live steam, however, the cans are capped almost immediately and almost always there is some moisture left in the can. The bacteria are never all killed and in this moisture they multiply immensely and by the time the cans are used again there are enough bacteria in them to seed the milk to the extent of many thousands of bacteria per cubic centimeter.

The NEW EDISON

"The Phonograph with a Soul"

Why not enjoy the summer evenings with the best musical entertainment the world produces?

Home life can be very "comfy" if associated with the New Edison and Edison re-creations.

The cost is a trifle compared to the enjoyment derived.

COMFORT FOR SITTING HENS

Give "Broodies" Nests Where They Will Not Be Disturbed During Period of Incubation.

(Prepared by the United States Department of Agriculture)

There are several ways to tell when a hen is becoming broody and wants to sit. Soft, downy feathers are left in the nest; the hen stays on the nest longer when laying. On being approached she will remain on the nest, making a chucking noise and ruffling her feathers. When one is reasonably sure that the hen is broody, and her breast feels warm to the hand, she is ready to be transferred to the nest previously prepared where she is to sit.

At this time it is advisable to dust the hen thoroughly with insect powder. In doing so hold the hen by the feet with the head down, working the powder well into the feathers, especially those around the vent and under the wings. The sitting hen should be dusted again on or about the eighteenth day of incubation to be sure that no lice are present when the chicks are hatched. Powder should also be sprinkled in the nest. Sodium fluorid may be used for the purpose, say poultry specialists of the United States Department of Agriculture.

When possible the nest should be in some out-of-the-way place, where the hen will not be disturbed. Night is the best time for moving the hen from the regular laying nest to the one she is to sit on. She should be handled carefully. A china egg or two should be placed in the nest, and a board or a covering may be placed over the nest so that the hen will not get off. Toward the end of the second day go quietly to the nest, leave some feed and water, and remove the covering from the top or front of the nest, so that she can come off when ready. The best feed for the sitting hen is whole corn or wheat, or both. Should she return to the nest after feeding, replace the china egg with those to be incubated. The nest should be slightly darkened, as the hen is then not so likely to become restless.

In cool weather it is best not to

Dusting the Sitting Hen With Insect Powder.

put more than 10 eggs under a hen. Later in the spring, however, from 12 to 15 eggs can be set, according to the size of the hen.

When several hens are sitting in the same room they should be separated by partitions and should be kept on the nests and allowed to come off only once each day to receive feed and water. A hen that does not voluntarily come off the nest should be taken off. As a rule hens will return to their nests before there is any danger of the eggs chilling, but if they do not go back in half an hour they should be put back.

Examine and clean the nest carefully, removing any broken eggs and washing those that are soiled. Nesting material soiled by broken eggs should be replaced with clean straw, hay, or chaff. Nests containing broken eggs soon become infested with mites and lice, which will cause the hens to become uneasy and leave the nest. This is likely to be the cause of the loss of valuable sittings of eggs. When a nest is infested with mites, the hen, if fastened in, will often be found standing over rather than sitting on the eggs.

Eggs laid late in winter or early in spring are frequently infertile, and for that reason it is advisable to set several hens at the same time. After from five to seven days' incubation, the time depending somewhat on the color and thickness of the shells, the eggs should be tested, the infertile and dead-germ eggs removed and the fertile ones returned to the hens. Thus in many instances all the eggs remaining under several hens may be placed under one or two, and the hens from which the eggs were taken may be reset. For instance, 80 eggs are set under 3 hens at the same time, that is, 10 under each hen. At the end of 7 days, at which time the eggs should be tested, it may be found that 10 are infertile or have dead germs, leaving only 20 fertile eggs. These 20 eggs can then be put under the two hens, and a new sitting placed under the third hen.

Facts About Rheumatism

More than nine out of ten cases of rheumatism are either chronic or muscular rheumatism, and neither require any internal treatment. All that is required is to massage the affected parts freely with Chamberlain's Liniment. You will be surprised at the relief which it affords.

CHEESE INDUSTRY IN SOUTH

Becoming Noteworthy Factor in Dairy-
ing, Particularly in North Caro-
lina and Tennessee.

In the South, particularly in North Carolina and Tennessee, the cheese industry is becoming a noteworthy factor in dairying, following the introduction of successful methods of cheese making developed by the United States Department of Agriculture. In each of these states two new factories were established during last year with the help of the dairy division specialists of the department.

The Grove City creamery, Grove City, Pa., conducted under the direction of the dairy division, continues to manufacture foreign types of cheese by methods developed in the laboratory of that division. The production of Roquefort, Swiss and Camembert cheese during the year exceeded 1,000,000 pounds.

HONEST FIGURES OF BENEFIT

Farmer Gains Nothing by Using Esti-
mates Too High or Low—
Best to Stick to Facts.

Good judgment, coupled with experience, should enable a farmer to come fairly close to the right figures in making a farm appraisal, say farm management specialists of the United States Department of Agriculture. A middle course is the safest, since the results of an appraisal either far too high or far too low will be of little or no value. False appraisal, to make the figures show up well, is labor thrown away, since the one who indulges in this pastime is only fooling himself. Stick to facts. Use market values, adding expense of getting to the farm all those things the farmer buys, and subtracting the probable expense of marketing from the market value of all those things he has to sell.

News Items of Local Interest

E. Erickson arrived Wednesday morning from Lewiston to spend a month with his son, F. E. Erickson.

Joe Schlosser, formerly publisher of the Troy News, came down from Troy Wednesday afternoon to help with the work at the Gazette office this week.

According to the census of 1920 there are 4,924 illiterate persons 10 years of age and over in the state of Idaho, "illiterate" meaning unable to write. Of this number 814 are native whites and 2,501 are foreign born. In the total population 10 years of age and over the percentage of illiteracy is 1.5, which shows a diminution since 1910, when it was 2.2.

Rev. Henry T. Green of Lewiston arrived Wednesday morning to spend the day with Mr. and Mrs. Howard W. Mort.

Mrs. E. R. Porter of Dayton, Wash., is visiting her folks here this week.

Mrs. N. M. Hansen, of Clarkston, arrived Wednesday morning to visit her nephew, Leo Raaberg.

Rev. Howard W. Mort will go to Lewiston Sunday, to fill the pulpit for Rev. Greene, who will be at Colfax that day.

Ullie Ellis was a passenger to Spokane, Tuesday afternoon.

Mr. and Mrs. E. T. Lundt and son, Clifford, of Genesee, spent Sunday in Kendrick with the A. Onstott family. Mr. and Mrs. Lundt lived on a farm between Kendrick and Juliaetta until a few years ago when they sold out and moved to the Genesee country.

Prof. Frank W. Candee of the mechanical engineering department of the University of Idaho, and Prof. Parkhurst, head of the poultry department, spent the week end at the Dunkle home.

William Hamilton came over from the Gifford country the first of the week to look after business matters here.

Dr. Kelley went to Lewiston last week to have a small piece of steel removed from one of his eyes. The steel was taken out with a powerful magnet.

The annual conference of the United Brethren church will convene at Juliaetta, Thursday, June 23 to 26, inclusive.

The American Legion dance will take place tonight at the Fraternal Temple. Jazz will be furnished by an orchestra from Moscow.

Mrs. Byard Davidson of Colton, Wash., is recovering from an operation for appendicitis. The operation was performed at a Pullman hospital.

The youngest son of Henry Hill broke his right leg just above the ankle, Wednesday afternoon of last week. It was not known that his leg was broken until Friday evening when Dr. Rothwell was called. The fracture was reduced and a plaster cast placed around the injured limb.

A. Wilmot has consented to take charge of the callithumpian parade to be given here the morning of July 4th. Mr. Wilmot has had considerable experience along that line, as he put on a similar event at Wallace a few years ago that was a grand success. He will need the hearty cooperation of the community, and that means that everyone must take an interest and help to make this the best part of the day's program.

Mr. and Mrs. Leo Raaberg went to Clarkston last Saturday to spend the week-end with Mr. Raaberg's mother, Mrs. Lathrope.

Bob Brown left last Friday for Anchorage, Alaska, to accept a position as gas pumpman for the railroad at that place.

Frances Locke, three-year-old daughter of Mr. and Mrs. A. R. Locke of Potlatch ridge, stopped at the Gazette office Monday to announce the arrival of a baby sister, born at Moscow Sunday noon. Her little sister's name is Eleanor and she weighed ten pounds last Sunday.

The Hupp brothers of Little Bear ridge have over 100 acres in beans this summer. They say they never had better prospects for a bean crop, as the ground is in splendid condition and the stand very regular and even. They feel optimistic over the bean situation and believe the price will be strong enough next fall to make the crop pay.

Manager Wilcox has arranged to play a return game of baseball with Juliaetta next Monday afternoon. Monday is the last day of the Juliaetta chautauqua.

Tuesday was a quiet day in Kendrick. A large delegation of Kendrick people attended the Sunday school picnic on Big Bear ridge that day.

A son was born to Mr. and Mrs. Harvey J. Smith of Moscow, last Friday. Mr. Smith is county engineer.

The Kendrick Furniture company installed an air brush for painting furniture, some time ago. This week Mr. Bechtel put in a large electric fan for drying the paint. He will soon have his shop so "handy" that he can press the button, go on a fishing trip, and on his return find a perfectly good set of furniture all ready to be sold.

J. C. Hamill believes in chautauquas. He lives approximately half way between Kendrick and Juliaetta. Last summer he signed chautauqua contracts for both towns and was the first on the Kendrick contract. This week he bought two Kendrick chautauqua tickets.

Mr. and Mrs. Orphie Hupp returned last Friday from a fishing and camping trip near Clarkia. They spent a greater part of the week here.

that it will probably be a month before this work is started. The commissioners spent the greater part of the day handling the regular routine of business.

One way to be different from everybody else these days is to quit grumbling.

"Well, I'll be switched," obfuscatedly said the gent from Jimson Junction, looking out of a window in a city hostelry. "Here it is midnight and the streets are full of people. Are they just going home from work yesterday or are they going to work tomorrow?"

R. B. Parks of Leland was in Lewiston the first of the week on business connected with the new Leland school building. Mr. Parks is serving his ninth year as a member of the Leland school board. He is one of Leland's best boosters.

The promoters of the rattlesnake fight which took place here some time ago, "started something." Since the request for a fighting rattlesnake, published in the Gazette two weeks ago, it was found necessary by the fight promoters to appoint a chief executioner and a burying squad to dispose of the surplus rattlers. The gutters have been fairly running blood from the executions. If you want to get a "rise" out of several young men of Kendrick, make a noise like a rattlesnake.

Miss Jeanette Shotes, a former Kendrick school teacher, was married at Spokane, June 11, to Hall Baum Funke of Alameda, California. Mr. Funke is with a bond firm in San Francisco.

U. S. G. Evans writes from Endicott, Wash., that the commercial club of that place is putting on a free chautauqua. Mr. Evans is secretary of the commercial club.

At a regular meeting of the highway commissioners it was decided to postpone the work on the strip of road between the bridge east of Kendrick and the mouth of Wandscher gulch, until the rush of lumber hauling is over. The commissioners state in the better that it holds nothing worse than beset them in the past, and with a good chance of something far better.

Miss Bernadine Plummer of Spokane arrived the first of the week to visit friends and relatives here.

James DeFord purchased two lots this week from Claud Candler, known as the Koker property. There is an old house on the lots which Jim expects to remodel and improve. He is also planning to do considerable grading and filling which will add greatly to the value of the property.

Claud Candler of Lewiston was in Kendrick the first of the week visiting his folks and transacting business.

Attorney George Hoyt of Troy was in Kendrick a short time Wednesday.

O. E. MacPherson of the Gazette force was unable to be at work this week on account of illness. He was down town Thursday, however, and feeling much better. He expects to take a vacation and will be away all of next week.

Manning and Muriel Onstott went to Lewiston, Wednesday, to visit relatives.

Frank Wilken and family and Miss Alma Finke motored to Moscow Sunday to visit Mr. and Mrs. Art Heick.

Sunday is the last day of the chautauqua and the evening program will be the last number.

Rev. Mitchell, Episcopal minister of Moscow, will hold services at the Grand Theatre Sunday evening at the usual hour.

Mrs. M. A. French made a business trip to Spokane last Friday leaving the shop in charge of Miss Edith Larson of Leland.

Fairview Notes

WORK OF BULL ASSOCIATIONS

Largest Increase Noted Since Work Was Inaugurated and Improvement in Herds Seen.

(Prepared by the United States Department of Agriculture.)

The number of active bull associations increased from 78 on July 1, 1919, to 123 on June 30, 1920. This is the largest increase since the work was begun by the United States Department of Agriculture, and is partly due to the momentum gained during the

A Good Type of Dairy Bull Such as Co-Operative Bull Associations Use.

preceding year, when the first real effort was made to extend the work.

Eighteen of the new associations are in South Carolina, Alabama and Mississippi, where a large part of the active field work has been done by the co-operative extension men. Reports from the associations which have been in operation for a fairly long time show that the bull association is fulfilling its purpose of improving the herds and that the daughters of association bulls have generally excelled their dams in milk and butterfat production. In one Maryland association 21 daughters of association bulls excelled their dams in yearly production by an average of 963 pounds of milk and 44 pounds of butterfat.

High Flyer.

It is no rare occurrence for the condor to soar to a height of four miles.

Pearson-Callison

Mrs. Jennie Pearson and S. P. Callison surprised their friends here by slipping off to Moscow Wednesday afternoon, where they were quietly married. No one here was the wiser until the following morning when they announced their marriage to their friends. The most hearty good wishes of the entire community are extended to them in their happy union.

Do not forget to pay the last half of your taxes before June 27th. 24-1t

\$100.00 REWARD.

One Hundred Dollars will be paid by the undersigned to any person giving information that will lead to the arrest and conviction of the person entering the home of S. H. Crottinger, Bovill, Idaho, at about 9:30 o'clock the night of June 8th, 1921, and at the point of gun choked and threatened the life of Mrs. Crottinger. (Signed) PAT MALONE, Deputy Sheriff.

Treatment of Common Colds

"If all who catch cold could be persuaded to remain in bed for the first twenty-four hours of such an attack" says a well known physician, "there would be fewer cases dragging on with distressing symptoms for weeks and often ending in some more serious disease." To make sure of a prompt recovery you should also take Chamberlain's Cough Remedy. Whether sick or well the bowels should move each day.
