

LATAH COUNTY NEWS PARAGRAPHS

Clipped From The Columns of Neighboring Papers.

Star-Mirror: From the report submitted to the public in this newspaper by the county agricultural agent, it appears that Frank Benscoter, a live-wire farmer of the Kendrick section, took time by the forelock and halted the labor wasted on mixed seed wheat. He determined to find something out of the polyglot field that spoke in so many languages to him to see if he could play the game of the survival of the fittest. He paid particular attention to the Jenkins club heads and his seed selection turned out well. From year to year from a little more than a bushel in the first planting he arrived to a 35 acre field from the original seed and has continued to select and evolve until he attracted the attention of the state seed commissioner. His seed became famous and while a great deal of it was sold and planted in Latah county several lots went to other counties and other states. Here is the object lesson.

Genesee News: Have you ever made a trip of any distance overland? Have you ever come to the forks of a road where each one was equally traveled—after you had been told by a resident to "keep the main traveled road?"—and you stopped and wondered which one you should take to get you to your destination the shortest way—and there was no sign-board there to tell you which one to take. Wouldn't you have gladly paid the price of making a sign-board for that particular place if you were sure you were going to take the right road, and possibly avoid getting onto the wrong road and traveling several miles out of your way? Of course you would. Then it simmers down to the fact that there should be a sign-board placed at every turn of the road where it is possible for a stranger to take the wrong road for Genesee.

With the coming of hard-surfaced roads must come the sign-board and the tourist park. Genesee has made no move whatever to guide people toward our little city. There are many times when people are coming from a neighboring town who do not know all the intricacies of the roads for the nearest route and often times take the wrong road for several miles thus causing delay and inconvenience. If you have ever taken a trip into a strange section of the country you will know how to appreciate a friendly sign-board which points the way.

Troy News: J. H. Walker of Driscoll Ridge brought to the News office on Saturday a branch from the top of one of his Lambert cherry trees that was a solid mass of ripe cherries, and asked that if possible it might be kept as an exhibit for the fair. In one place on the branch in a space as big as a man's hand 90 well developed cherries were counted and the entire branch was loaded in the same way. Mr. Walker stated that this year was the most prolific in fruit production he had seen for a long time, but the heavy bearing on these trees was the rule. His cherry crop this season has been a big paying part of his farm earnings.

Julietta Record: After all it is perhaps the best thing that the government has decided to send home the bodies of all the dead American soldiers resulting from the late war. Those who desire the bodies of their boys sent home can have them sent at government expense to the point of delivery with \$100 allowed for burial expenses. At least we are reliably informed this is the way the government is returning the bodies of the soldier boys.

Deary Press: A meeting of the board of directors of the Farmers' Warehouse and Elevator Company

Peck Bank Reorganized

Peck News: A meeting was held Saturday by the subscribers for the new banking institution, which is soon to rise from the ruins of the old, when the State Bank of Peck will again be a going concern. This is made possible by the untiring efforts and progressiveness of the citizens of the community.

At the time the meeting was called 91 of the required 100 shares had been taken, but during the afternoon ten more were placed completing the required amount, with one to the good.

In all probability within the next two weeks the organization will be completed, the officers elected, and the bank opened in time to take care of the business incident to the marketing of the grain crop.

Of the number who were in line for cashier of the new bank, all indications point to the selection of F. Byron Smith of Kendrick, to fill that important position, to him, in great measure will depend its success.

Mr. Smith, who is an experienced banker, was present at the meeting and addressed the stockholders, stating about what he thought would be necessary, under existing conditions, in conducting the reorganization and also business policy of the bank.

Fire at Southwick

The Marion Wright residence and some household goods were destroyed by fire last Monday about noon. Insurance to the amount of \$1500 was carried on the house and \$300 on contents, which it has been estimated will just about half cover the loss.

The origin of the fire is not definitely known but it is presumed that it was caused by a defective flue as the flames first appeared in the attic near the chimney.

Mrs. Wright was away from home at the time and Mr. Wright was engaged in preparing dinner. He had a fire in the kitchen stove and had dinner nearly ready when he heard some children in the street cry "fire." He paid no attention to the alarm at first but as it was repeated a number of times he walked to the front door and a neighbor across the street informed him that his house was burning. The flames had gained such headway that it was hopeless to try to save the building.

It requires a license now to sell real estate. G. F. Walker sent for his this week. They cost ten dollars per annum. A real estate agent can't collect commission unless he has a state license.

Ltd., was held in Moscow last Tuesday at which time matters concerning the future policy of the corporation were discussed with its attorney, A. H. Oversmith. At this meeting J. A. Harsh consented to act as trustee for the company, to act as the executive head of the concern during his incumbency. The board of directors will co-operate with Mr. Harsh in all ways, and every effort will be put forth to bring the farmer investors in this \$25,000 enterprise out of their difficulties with colors flying. Mr. Harsh accepted the trusteeship only upon the continued insistence of the stockholders who have confidence in his ability to handle it and very properly feel that they may rely upon his interest in their behalf and in the ultimate success of an important local enterprise. The arrangement as it exists at present is a decided victory for the company, for the stockholders have feared that the back-sets of the past two or three hard and profitless years would force them into bankruptcy. As matters now stand the company can and will go on as one of the biggest business factors of the upper Potlatch country. John Waide will have the active management of the elevator. Mr. Harsh is now in Spokane to arrange with the Northwest Wheat Grower's association to handle association wheat thru the house.

National Agreement Effectuated

At a meeting held at Washington, D. C., in April, the executive committee of the American Farm Bureau Federation and the States Relations Service, U. S. Department of Agriculture, signed an agreement of understanding outlining the general policy to be followed by both parties in conducting the Smith-Lever Extension work in co-operation with the various Farm Bureaus throughout the nation. Many questions have arisen from time to time regarding the work that can be done by the Extension Service and some trouble had resulted because a definite policy had not been established.

The National and State Farm Bureau Federations are formed by representatives from the various County Farm Bureau organizations. These county organizations work directly in co-operation with the county agent and various Extension specialists who are employed co-operatively by the States Relations Service, U. S. D. A., and the State Agricultural college. The work of the Extension Service is primarily one of education, "the giving of instruction and practical demonstrations in agricultural and home economics to persons not attending or residents in said colleges in the several communities.

The general basis of co-operation as agreed and the National Farm Bureau and signed by representatives of both parties is as follows:

"The County Agricultural Agents, home demonstration agents and club Agents co-operatively employed will be members of the Extension Service of the State Agricultural College and under the administrative direction of the Extension Director, and will carry on such lines of extension work as may be mutually agreed upon by representatives of the Agricultural college and the farm bureau or other like organizations."

"Since these county extension agents are a part of a public service as defined in the Smith-Lever Act, and receive some part of their salary from public funds, they are to perform service for the benefit of all the farming people of the country, whether members of the farm bureaus or not, and are to confine their activities to such as are appropriate for public officials to perform under the terms of the Smith-Lever Act. The county agents will aid the farming people in a broad way with reference to problems of production, marketing and formation of farm bureaus and other co-operative organizations, but will not themselves organize farm bureaus or similar organizations, conduct membership campaigns, solicit memberships, receive dues, handle farm bureau funds, edit and manage the farm bureau publications, manage the business of the farm bureau, engage in commercial activities or take part in other farm bureau activities, which are outside their duties as extension agents.

"The county agent and other extension agents will co-operate with Farm Bureaus or other like organizations interested in extension work in the formulation of county and community plans of co-operative extension work. It will then be the duty of the county agents, under general direction of the Extension Director, to take charge of the carrying out of such plans and to co-operate with officers, committees and members of the farm bureaus and with other organizations and residents of the county in the prompt and efficient execution of these plans."

It is difficult for the individual to differentiate clearly between the extension service and the farm bureau. However, they are very distinct, the farm bureau as an organization has its relations with the extension service (consisting of the county agents, extension committees, demonstrations, etc.) as one of its departments. Other departments might be a publicity department, which would prepare and publish a Farm Bureau News, press articles, notices, etc.; departments of relations with marketing and other co-operative associations, etc.

Fire at Lelap

Last Saturday morning at 4 o'clock a fire was discovered in the new Leland school building. Mrs. Claud Craig was the first one to notice the flames. She gave the alarm at once and while Mr. Craig rushed to his store for fire extinguishers other citizens of the town quickly responded to the call and within a short time had the flames under control. Those who had charge of the building had left a tank of water and a number of buckets filled with water to be used in case of fire. This forethought on their part was of great assistance in getting the fire put out. Loose earth was also thrown on the flames and did good service in smothering the fire.

The damage was estimated at \$404 which was fully covered by insurance, the adjustment being made by G. F. Walker.

Five or six joists and a strip of floor between the joists were badly charred and the walls in three rooms so badly blackened by smoke that they will have to be calcimined.

Bun Penlund, who has the contract of putting up the building, is now engaged in repairing the damage. The building would have been finished this week if the fire had not occurred. It is estimated that it will take a week to repair the damage, so that the building should be completed the latter part of next week.

The origin of the fire is a mystery. The school board has put a night watch in charge of the building, until it can be completed.

Leland Secures Prof. Smith

Prof. Wickliffe R. Smith of Southwick has been elected principal of the Leland school for the ensuing year. The positions in all of the grades and high school have also been filled.

Mr. Smith was principal of the Southwick school for a number of years and last year had charge of the school at Cavendish. He has had a wide experience in school work and will no doubt build up the Leland school. He will still retain his residence in Southwick and will drive back and forth to his school work a greater part of the year in his car.

Compton Opened Market

Peck News: C. G. Compton of Kendrick will open a meat market in the Walker building next Monday, August 8th, and will be ready at that time to take care of all your wants in the meat line.

Mr. Compton is an old market man and thoroughly understands the meat business. This will give the citizens of Peck and surrounding territory what they are very much in need of, a place to buy fresh meats, but in order to make it a success he must have undivided support on the part of the people.

Bought Rich Farm

J. C. Rich of the Leland section sold his 160 acre farm to J. C. Harney, a railroad man of Lewiston. The place is located 2 1/2 miles east of Leland. Mr. Harney gave as part payment on the farm a 29 acre ranch near Spokane, at a valuation of \$8,000. The price on the Rich farm was \$13,000, which includes this year's crop.

Mr. Rich and family plan to make their home on their newly acquired Spokane property, which is said to be in a high state of cultivation.

Jesse Rich Jr. has leased the Leland farm from Mr. Harney.

Mrs. George Riggan was called to Spokane last Friday on account of the serious illness of her daughter. She was accompanied by her youngest daughter, Della. From Spokane they expect to go to Ontario, Oregon, for an extended visit with Ed Riggan who is operating two threshing outfits in addition to his farm work.

Wind, Dust, Rain and Hail

A heavy wind and dust storm, combined with rain and in some sections hail, visited the Potlatch country Monday afternoon and did considerable damage to crops of all kinds, cut off the electric power and in some localities even up-rooted trees.

Some of the older residents here said it was the hardest wind that they had ever witnessed in the Potlatch. For a few minutes the air was black with sand and dirt, which soon disappeared after the heavy rain.

In Kendrick there was not more than enough rain to settle the dust and on American ridge Wade Keen said it hardly rained enough to stop grain cutting. Potlatch ridge, however, was visited with a rain storm that nearly approached a cloudburst. Jesse Hoffman stated that fully an inch of rain fell within a few minutes time and that the rain was mixed with large hail stones, which, combined with the heavy wind, did considerable damage to crops. He had a field of 50 acres of wheat about ready to cut which he estimated was damaged at least to the extent of 50 per cent loss.

In the vicinity of Southwick some big shade trees were badly damaged by the wind and at the Lewiston camp grounds several people narrowly escaped injury by falling trees. One of the big cattle barns at the Lewiston fair grounds was blown down with a loss estimated at \$1,000.

A cloudburst below Juliaetta covered the railroad track with dirt and rocks a distance of several hundred feet, delaying the night train, which did not arrive in Lewiston until the early hours of the following morning.

Considerable damage was done to the corn crop and the gardens on Potlatch ridge. Some fields of corn were fairly riddled by the hail and leaves whipped to shreds by the wind.

Fortunately for all concerned the storm was of short duration or the damage would have been very extensive.

Had Fine Trip to Coast

Mr. and Mrs. L. J. Herres, Wayne and Eleanor, returned Tuesday from a three week's tour of some of the principal points of interest in Oregon and Washington. They report a most delightful time. Their travels were made in their Ford car and a distance of 2800 miles covered. They had no car trouble whatever, except four punctures and one blowout, which is an enviable record, considering the length of their trip.

They carried a complete camp equipment with them so were independent of hotels and could stop wherever they pleased.

The worst stretch of road encountered over the entire 2800 miles was between Pomeroy and Lewiston. The greater part of the trip was made over surfaced highways, where the car hummed along on high for hours at a time.

In a little town between Astoria and Portland they ran across the Joe Ivy family who are very pleasantly situated there. Joe is conducting an auto livery and is doing well. They also had a brief visit with the Emmel family at Hood River, and found them to be getting along nicely.

Mr. Herres stated that the camp grounds along the way were generally very good. At Astoria, Oregon, some member of the booster club would drive to the camp ground, introduce himself to the tourists and welcome them in behalf of the town. This naturally left rather a pleasant memory of Astoria.

Two stops were made on the coast—at Portland and Seaside. Large numbers of tourists were congregated at both of these points which are the objectives for most of the auto tourists coming from eastern cities.

LIST OF TEACHERS IS NOW COMPLETE

Kenrick Secured Strong Teaching Force

The local school board has secured the full corps of teachers for the ensuing year. The members of the board have every reason to believe that the teaching force is a very strong one and that the coming school year will be a most profitable one for the pupils. None of the teachers of last year are included in this year's list.

A. L. Daniel, who will have the charge of the department of the school, is a graduate of Washington State College, and holds a B. A. degree in the department of economic science and history. He has also had training in public school administration and supervision. He finished a successful year at Pomeroy last year as principal of the high school. Mr. Daniel is married and has one child.

D. E. Carlisle, who is also a graduate of Washington State College, has been elected to teach science, mathematics, manual arts and coach of athletics. In college he was on both football and basketball squads, as well as track, under the coaching of Gus Welch and Doc Bohler.

Miss Marion Dirks will have charge of the department of Home Economics. She has specialized along the lines of domestic science, having graduated from the Lewiston Normal last June. She holds a specialist's life diploma for home economics.

Mrs. Howard W. Mort will teach the seventh and eighth grades. She is a graduate of Willamette University and has an A. B. degree from that college. She has taught very successfully having had one year's experience in high school work. The members of the board feel confident that her grades will be most efficiently handled.

Miss Hazel E. Steward, who taught in the Juliaetta schools last year, will have the fifth and sixth grades. She is a graduate of the Lewiston Normal and her teaching experience has been quite successful.

Miss Viola McAllister of Crescent will teach the third and fourth grades. She is also a graduate of the Lewiston Normal and has had considerable experience in school work. She taught a rural school near Troy last year and her work there was most satisfactory.

Miss Claire A. Newkirk, with three years experience in primary work, will have the primary grades here. She is a Lewiston Normal graduate, having specialized for primary work. She holds a primary specialist's life diploma from the Normal.

School will open Monday, September 12.

Get More Liquor

Sheriff Woody and Deputy Sheriff Summerfield, Wednesday, arrested a man at the Tom Nichols place near Avon, by the name of L. N. Breeding, and found beside him on the floor prehistoric relics in the shape of two cases of real Scotch and Canadian Club whiskey. As usual the officers pronounce it high grade stuff.

Breeding was asleep in the barn when the arrest was made, which plainly indicates that he is a reckless fellow, or he would have kept better guard over his treasures.

The officers also discovered that he was driving a Reo car on a Chevrolet license. He was taken to Moscow and charged with having whiskey in his possession.

Rev. Mitchell, Episcopal minister of Moscow, who has been holding services Sunday evenings at the Presbyterian church here, will discontinue them during the month of August. He expects to hold regular Sunday night meetings here, beginning next month.

Do you know why it's toasted?

To seal in the delicious Burley flavor.

It's toasted.

Foreign Advertising Representative THE AMERICAN PRESS ASSOCIATION

A big, sensational advertisement will undoubtedly get more immediate results, but it's the consistent advertiser who stays with it week after week, who can see the increased profits at the end of the year.

Every precaution should be taken during these hot, dry days to prevent fires. The numerous fires that have occurred in the surrounding country during the past week ought to serve as a warning to everyone. It is easier to start a fire than it is to put it out.

A Chicago osteopath has discovered a use for the most unlovely anatomical feature of a human being, next to ears—the Adams apple. He says it makes the music you pay \$5 and war tax to hear, and that everybody should train his Adams apple.

An exchange says there are not so many bed time stories as there used to be, for the reason that the old folks have generally gone to roost when the children come home.

The real purse fillers on the farm are the soil saving crops.

METHODIST CHURCH

Howard W. Mort, Pastor.

Library open Wednesday and Saturday from 2 to 5 p. m. This is your library, use it.

Sunday School at 10 a. m. No morning service. Epworth League at 7:15 p. m. Evening Service at 8 p. m. You aren't a stranger in the church. Come and worship with us.

Leland Items

Mr. Robbins had a straw stack burned last week and barely discovered it in time to save the wheat by moving the sacks.

Mrs. N. B. Long is visiting Mrs. Thos. Daugherty a few days this week.

Mrs. Jesse McGhee and Mrs. Clyde McGhee are visiting in Leland this week.

Miss Edvth Winegardner accompanied by her mother and Mrs. J. A. Hall, drove over to Genesee, Monday.

The Ladies Missionary Society met at the home of Mrs. Koepf, Thursday. Mrs. Koepf served a lovely dinner to about thirty, including the children.

Saturday evening, August 14, the ladies will give a pie social in the I. O. O. F. hall. Pie, coffee and lemonade will be served. Every girl bring a pie with your name on. The married ladies bring pie with no name, which will be sold whole or in pieces as desired. Come and bring a pie or buy one.

A number of Georgene Smith's little friends helped her celebrate her birthday last Thursday.

Monday afternoon, quite a storm passed this way, consisting of rain, wind and hail. The hail did considerable damage to gardens and corn and beans look pretty ragged. It also threshed standing grain to considerable damage.

Crescent News

Mrs. I. T. Buckmaster and Mrs. C. C. Mulkey left Saturday to visit relatives in Prescott, Wash. They

were going from there on to Baker, Oregon.

Mrs. Grace Petersen and Miss Francis Sutton are home for the rest of the summer vacation.

Miss Mamie Hunt and Fred Zimmerman spent Sunday with Mr. and Mrs. Stewart Wilson.

Mr. and Mrs. Dick Winegardner and family spent Sunday with relatives at Leland.

Bell Hunt spent Sunday at the Mulkey home.

Fred Zimmerman, Eldia Hunt, Abe Dorendorf, and Jim Farrington are helping Jim Kyle with his threshing outfit this week.

Mrs. Clinton Wright had the misfortune of falling from a cherry tree, July 2, and hurt herself seriously. She is improving fast at this writing.

Mrs. I. T. Buckmaster, Mrs. C. C. Mulkey, and Mrs. C. I. Mulkey spent Friday afternoon with Mrs. Dick Winegardner.

Miss Nina Hunt left Wednesday for American Ridge where she has been working for the last month.

Southwick News

The beautiful home of R. M. Wright was destroyed by fire Monday noon. No one really knows how the fire caught but the first thing we knew the entire roof was in flames. Mr. Wright had a fire in the cook stove at the time the fire started. Most all the furniture on the first floor was saved while all that was on the second floor was destroyed. Mr. and Mrs. Wright are now living in the McDoual hall. It took lots of fighting to keep Gus Ziemann's house from burning.

Carl Smith, who has been attending the summer session at the Normal, visited his parents, Mr. and Mrs. James Smith, last week. He left for Fix ridge, Sunday.

Fred Lyons and family are visiting at the home of Charles Hayward. Mrs. Lyons is a sister of Mrs. Hayward.

Mrs. Newt. Bateman had the misfortune to fall and break her arm just above the wrist, Monday evening.

James Smith and family spent the day with Dean Baker and wife, Sunday.

The ladies of the community have been cleaning up the parsonage for Brother Nolan and family, who will move in, in a short time.

Linden Items

Jim Garner started his threshing machine Monday.

Miss Clara and Delbert Mulkey spent Saturday evening and Sunday with Alta Fonuorg.

Mr. and Mrs. Lyman Vaughan of Moscow and Claud Vaughan of Midvale, Idaho, spent Sunday with Mrs. Mary Vaughan.

Mrs. A. W. Longfellow has been quite ill but is better at this writing.

Mrs. James Kunes arrived from Lewiston, Tuesday, for a visit with friends and to look after business interests.

Mr. and Mrs. Stewart Wilson and Elsie Zimmerman were callers at H. J. Starr's Sunday afternoon.

(Too late for last week)

Mrs. Otis Stone and children who have been visiting her parents, Mr. and Mrs. J. P. Alexander, returned to their home in Lewiston, Saturday.

Mr. and Mrs. Dick Winegardner, Mr. and Mrs. Harry Wright and Mrs. Clem Israel attended the funeral of Ray Taylor in Juhuetta Sunday.

Ruth and Raymond Alexander returned to their home at Winchester, Saturday, after visiting their grandparents, Mr. and Mrs. J. P. Alexander. They were accompanied home by Mrs. Addie Alexander.

Still, It Might Be Worth Trying. If men were as perfect as their wives expect them to be, their wives would all die of ennui.—Boston Transcript.

Chamberlain's Colic and Diarrhoea

This remedy is certain to be needed in many homes before the summer is over. Buy it now and be prepared. It is recognized as a most reliable remedy for bowel complaints and may be obtained at any drug store.

POULTRY MANURE QUITE VALUABLE

Accumulation Beneath Perches of Fowls Receives Only Occasional Attention.

IS FREQUENTLY THROWN AWAY

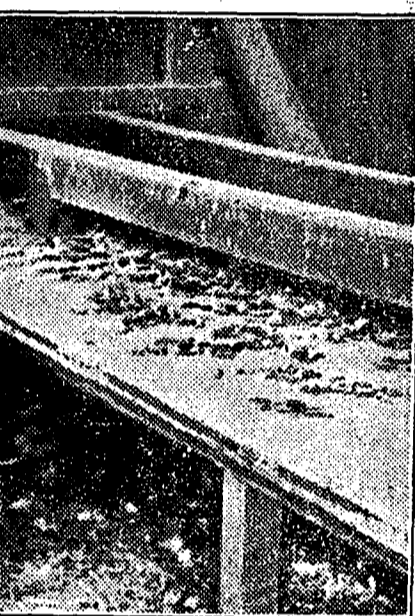

Is Worth 30 to 40 Cents Per Fowl Per Year If Properly Cared For—Especially Rich in Nitrogen and Phosphorus.

(Prepared by the United States Department of Agriculture.)

The average poultry raiser attaches little or no value to the manure produced by his flock. Its gradual accumulation beneath the perches of his fowls receives only occasional attention, in many instances, and even when cleaned out more frequently is thrown away. When its removal becomes necessary he considers it one of the unavoidable and unpleasant evils that go with the business.

Rich in Nitrogen and Phosphorus. But poultry manure has a very real value, and may become a profitable by-product of the plant. It has been determined by the Maine experiment station, working in co-operation with the United States Department of Agriculture, that the average night droppings of the medium breeds amount to 30 pounds a year for one fowl. On this basis 100 fowls would produce 3,000 pounds, or 1½ tons. The analyses of this manure show it to be especially high in two of the three principal fertilizing elements. If the plant food contained in a ton of average fresh poultry manure were bought at the price paid, usually, for it in the form of commercial fertilizers, the outlay would be about \$10.

Taking into account the fact that the quantity of manure produced in

A Roosting Platform Helps to Conserve the Night Droppings.

the daytime is at least equal to that produced at night the specialists find that one average hen produces about 60 pounds of manure in a year. However, only the night droppings are available for use, as the day droppings are widely scattered over the yards and ranges. The night droppings from 1,000 hens would be worth about \$150 a year. As hen manure, as it usually is cared for, contains only about one-half its original value, the loss through this form of neglect must be very large for the entire country.

The town or city backyard-poultryman has two real incentives to induce the saving of his hen manure. In the first place his poultry house should be kept clean if his fowls are to be healthy, and, in the second place, the manure may be used immediately during a large part of the year in the orchard, or around berry bushes. However, if this immediate use is resorted to the manure should be applied somewhat sparingly. It is from two to three times richer in phosphoric acid than the ordinary farm manures. This, of course, is due to the kinds of feeds used, and also to the fact that liquid and solid matter are together.

It can be handled most satisfactorily if mixed with loam to remove stickiness in the summer. In the winter it should be mixed with a fair proportion of loam, sawdust, or coal ashes, sifted dried earth, land plaster, or gypsum. Wood ashes and lime should never be used as they set free the nitrogen, which must be avoided.

Keep in a Dry Place. To put manure on the ground in the winter would mean to lose one-half or more of its value. The better plan is to store it in barrels or boxes until time to use on a growing crop. When stored this way the container should have several large holes bored in it to admit air. Some plants having several thousand fowls have large bins of concrete for saving this manure. Untreated, a large part of the nitrogen escapes into the air as ammonia gas.

The Maine experiment station recommends using with every 30 pounds of poultry manure 10 pounds of sawdust, 10 pounds of acid phosphate, and 8 pounds of kainit. The acid phosphate and the kainit prevent the loss of nitrogen, and the sawdust absorbs the excess moisture. If sawdust is not obtainable, dried earth in about the same proportion may be substituted. After being treated in this way the manure should be put in a sheltered place until used. If the materials are kept handy the business of mixing soon becomes a routine task.

Restoring Luster of Pearls. Although there is no method known that will positively guarantee the restoration of the luster of a pearl which has become dull through careless handling, the Ceylonese are said to have a novel way of trying to restore it. They simply feed dull pearls to chickens. After the pearls remain in the chickens' crops a few hours, the fowls are killed and the pearls removed. The light friction to which they have been subjected in the crops of the chickens is supposed to restore their luster, at least to some extent.

True Humor. In the end we find that the test of true humor is the reaction it makes to the depression, sorrow and sadness of life and its power to give brightness and courage in the midst of disaster. The joke is worth while that makes life more possible and sorrow a little less impossible—that brings a smile amid tears, as sunshine in the heart of clouds is seen cutting its way through the darkness. Yet, despite England's training in trouble, what is there finer than the delicate humor of Oliver Wendell Holmes?—Exchange.

Mrs. Linda Harrod Endorses Chamberlain's Tablets.

"I suffered for years with stomach trouble and tried everything I heard of but the only relief I got was temporary until last spring I saw Chamberlain's Tablets advertised and procured a bottle of them from our druggist. I got immediate relief from that dreadful heaviness and pain in the stomach after eating. Since taking two bottles I can eat anything I want without distress," writes Mrs. Linda Harrod, Ft. Wayne, Ind.

POOR POTATOES CUT PROFITS

Waste of Time and Labor Results From Every Bad Specimen in Storage or Transit.

Every rotten, frozen, or undergrade potato that is loaded and every potato spoiled while in transit or in storage reduces the grower's profits and means a waste of time and labor, says the United States Department of Agriculture. It also means a waste of time and labor for every person handling it, a waste of car space, and consequently it amounts to an appreciable loss to the community as a whole. Through its markets inspection service the department is trying to eliminate this waste.

GROWING SUGAR BEET FOR SEED

Annual Requirement in This Country Is Approximately 16,000,000 Pounds.

REQUIRES LARGE INVESTMENT

Plant Is Biennial and Roots Do Not, Under Normal Conditions, Send Up Seed Stalks and Develop Seed Until Second Year.

(Prepared by the United States Department of Agriculture.)

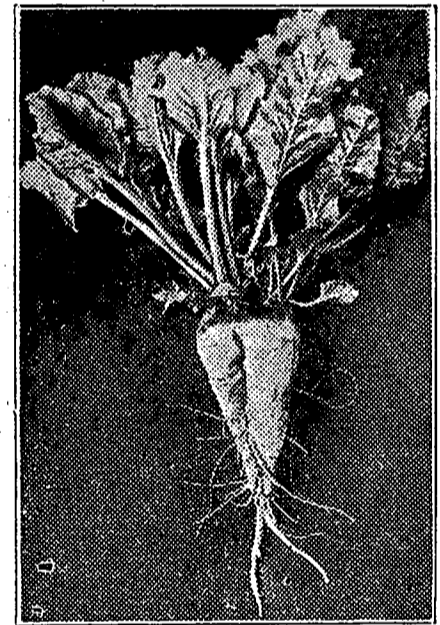

One of the first requisites of a permanent and satisfactory beet-sugar industry is an adequate supply of seed of good quality. It has been scarce and as a result the production of sugar-beet seed in the United States has made rapid progress during the past few years. The present annual requirement in this country is approximately 16,000,000 pounds, of which about 50 per cent is now produced within the nation's borders. With the continued development of the sugar-beet industry more and more seed is required each year, but it is confidently expected by specialists of the United States Department of Agriculture that eventually the total American requirement will be grown in this country. In order to encourage the growing of sugar-beet seed and assist in its development along proper lines, the department recently published Farmers' Bulletin 1152, "Growing Sugar-Beet Seed in the Rocky Mountain States."

Investment Required Large.

The development of this industry has been greatest in the irrigated sections of Colorado, Montana, Utah and Idaho, and special reference is given in the bulletin to the growing of sugar-beet seed in this region. The industry is best adapted to large operators, the investment required for special machinery being so great that the business is not really profitable on less than 100 acres. It is to the growing of sugar beets on a large scale that the instructions in the bulletin refer.

The sugar-beet plant is a biennial and the roots do not, under normal conditions, send up seed stalks and develop seed until the second year. Beets of small size are grown the first season, are stored in pits known as silos during the winter, transplanted in the spring, and the seed is harvested at the end of the second season.

Only small-sized roots not over 16 ounces in weight are used for commercial seed production. The eight-ounce beets are usually considered

One of the Many Widely Varying Types of Sugar Beet Found in Commercial Fields.

the most profitable. These are known among seed producers as stecklings.

Roots for commercial seed production are usually started about the same time as beets intended for factory purposes, though some growers have had better success by starting their stecklings a little later, as in June. July sowings may be satisfactory if conditions happen to be just right, but usually contain a large percentage of roots too small for profitable handling. To keep the roots from growing too large, seed is generally sown at the rate of 10 to 16 pounds per acre and the plants are left unthinned. It is important that the seed be of highest quality and, because an even stand is highly desirable, the bulletin recommends that germination tests be made.

Harvest of Steckling.

The steckling harvest should be started before freezing weather. In northern Colorado it generally begins by September 20 and is usually completed with all the beets in the silos by October 10. Harvesting begins by mowing the tops of the stecklings as close to the ground as practicable. If the mowers are run first one way and then back again on the same row, many leaves will be cut off which would not be removed if the machines were run in one direction only. The beets are then plowed out, and in order to do this work so that they may be gathered more readily, it is frequently desirable to irrigate before harvesting, especially if the soil is dry. If the foliage of the stecklings is thick and heavy, it pays to gather the leaves and silo them for feed, but usually they are left on the ground to dry. In order to prevent drying out, stecklings must be hauled immediately after being pulled.

HAVE IT MADE TO MEASURE FROM THE ALL WOOL LINE

THEY'RE OFF -

The Race Has Started!

THE race for Fall business has started and we're in it to win.

We have entered against the field the most famous line of tailoring in America, the

International

and every man who puts his money in our hands will cop a prize for sure.

Nothing can beat All Wool and Low Prices!

We have the widest range of rock-bottom prices and the finest array of new woolsens and worsteds you have ever laid your eyes on.

WHITEWASHING WILL KILL MANY INSECTS

Spraying Is Effective in Destroying Vermin.

Cleanliness Is of Utmost Importance in Keeping Many Pests Under Control—Provide Abundance of Light and Fresh Air.

(Prepared by the United States Department of Agriculture.)

Whitewash is effective in killing mites and other sorts of vermin and may be used freely in spraying the poultry houses, brood coops and roosts, scientists of the United States Department of Agriculture say. In badly infested places it is advisable to clean and spray with a stronger disinfectant, and in 48 hours follow with a good spray or coating of whitewash. An effective whitewash for this purpose is made as follows:

Stake half a peck of lime and dilute it with 20 gallons of water; add one pound of salt previously dissolved in water; to this mixture add two

Whitewash, if Properly Applied, Destroys Parasites and Makes House Fresh and Clean.

quarts of crude carbolic acid. Apply with a spray pump or brush. This, if properly put on, not only kills the mites, but destroys all their eggs and makes the house or any building where it is used fresh and clean.

Cleanliness is of the greatest importance in keeping lice, mites, fleas, and other insects under control. The poultry houses, roosts, dropping boards, brood coops, and all other places that the fowls occupy should be kept clean. An abundance of light and fresh air should be provided. While these things cannot be depended on to keep away lice and mites, they make it easier to determine when the pests

are present and help to keep the fowls healthy, vigorous, and better able to withstand an attack of lice and mites. Sick or diseased fowls are always the first victims of these parasites, which makes it important that the fowls be kept healthy.

TO WAGE HARD FIGHT AGAINST CORN BORER

Steps Taken to Prevent Spread of Insect Pest.

Specialists in Charge of Work Have Completed Plans for Carrying on Work—Infested Area Borders on Lake Erie.

(Prepared by the United States Department of Agriculture.)

Suppressive measures against the European corn borer are to be applied vigorously this spring in the western part of New York state to test the possibility of preventing the natural spread of this pest. Specialists of the United States Department of Agriculture in charge of the work have completed their plans, which will be carried out in co-operation with state agencies.

The infested area where the experiment is to be tried out borders on Lake Erie and partly on that section of Canada where the corn borer made its appearance last year. The fight is to be carried against the insect while in its winter quarters. The corn stubble and refuse that have been lying in the fields since last year's harvest will be cleaned up and burned.

Meanwhile, as another method of attack, thousands of cocoons of a small, wasp-like insect whose grub has been found to be a parasitic enemy of the corn borer are being sent to the United States by a representative of the department who is in southern France studying the enemies of the pest. Thus far about 5,000 cocoons have been received at the Boston office of the department, where they are hatched out and the winged insects liberated in hundreds in infested fields. The European corn borer, which has been known in this country but a few years, is looked upon as one of the most dangerous insect pests that have made their appearance in the United States. Some fears are entertained that it will eventually make its way to the corn belt. Infestations of the pest occur in sections of New York and Massachusetts, where federal quarantine to check the spread of the insect are in force.

Insects That Defy Winter.

In the dead wood of old snags are many insects that live through the winter regardless of how cold it gets; creatures whose weak bodies seem to defy the frigid temperature. Pull off a bit of old bark from a snag, and note that there is life beneath it; little people that try to scurry for cover when their home is wrecked. They are not so agile as when the weather is warm, but they are not in a state of torpor.

80 Acre Farm for Sale

40 acres in cultivation, all fenced and cross fenced; house 14 by 32, 1½ story. Barn 20 by 40; 14 by 32 woodshed and machine shed; 1 mile to school and on R. F. D. 4½ miles from Deary, on Texas ridge. Price \$6400, part cash.

Notary Public for Idaho.

THREATEN CROPS IN MANY STATES

Vigorous Measures Against Attack of Chinch Bugs Are Urged by Federal Bureau.

MISSOURI REPORTS OUTBREAK

Severe Infestations in Central Mississippi Valley Region From Texas Northeastward to Illinois and Michigan.

(Prepared by the United States Department of Agriculture.)

Energetic measures against the chinch bugs which threaten injury not only to the wheat and rye crops of Missouri but to corn as well are urged by the bureau of entomology, United States Department of Agriculture, in view of reports of an impending outbreak of the pest in that state. Widespread and severe infestations of the pest are reported in the whole central Mississippi valley region, starting in northern Texas and extending in a northeasterly direction over Oklahoma, Kansas and Missouri, touching Nebraska, and extending across Illinois and Indiana into Michigan.

Generally Distributed Through State. The chinch bugs, latest advices say, have had a mild winter and are generally distributed throughout the Missouri wheat and rye fields, breeding in considerable numbers in the St. Louis neighborhood early in May. The farmers, it is said, have been watching the pest more closely than usual this spring, but all of them do not know yet that there is danger that their corn may be damaged worse than normal last year. Wheat is likely to ripen one or two weeks earlier this year, and the rains have delayed the planting of corn.

The bugs are certain to migrate when the wheat ripens and the corn will be so backward that damage by the bugs is likely to be very severe. It is well to expect the bugs to begin migrating to corn as soon as the wheat begins to harden into maturity ten days before the heads are ripe. Any barrier work or creosote repellent line work should begin as the bugs will migrate in increasing numbers as the wheat stalk ripens upward. The binder will shake loose those not already out and stragglers will continue to migrate in serious numbers for five

sow two drill widths of millet between corn and the nearby fields of wheat and rye. The more quickly this is done the better, so as to make as good growth as possible of this trap crop before the bugs attack it. When the bugs have migrated into the trap crop it should be plowed seven or more inches deep. Care must be taken to plow deeply and well, then to pack the ground with a drag or harrow or roller. Little time or work is required to make this strip and the cost is small. It has hitherto been found very profitable.

SEPARATE PENS FOR POULTRY

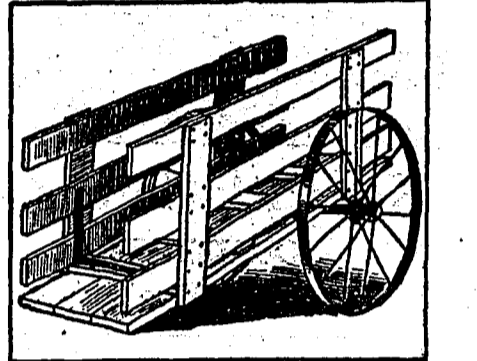

Not a Wise Plan to Keep Geese, Ducks, Chickens and Turkeys Together in Same Yard.

It pays to keep each variety of poultry to itself. Ducks and geese will foul a hen yard; geese will drive away all others at feeding time and hog everything, while young turkeys may be killed by hens and roosters. A separate lot for each is best, and will soon pay for itself in quicker growing stock. In addition, it is more convenient to handle each when kept to itself. Usually all that is necessary is an individual feeding yard.

CHUTE FOR HANDLING STOCK

Comparatively Easy Method to Construct Device as Illustrated—Old Wheels Useful.

Farmers who ship many hogs, sheep and calves during the year know the value of a movable chute for loading

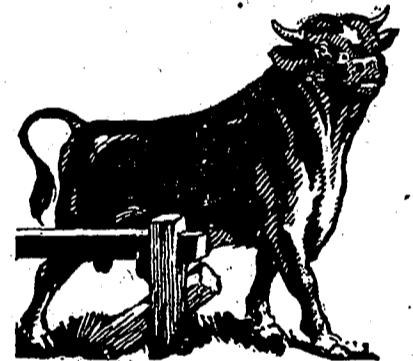

Loading Chute on Wheels.

and unloading live stock. Make the chute as shown. A pair of old buggy or cultivator wheels make it easy to handle.

Them Were the Happy Days.

to fifteen days after harvest. Barriers, therefore, must be maintained from the time of migration until possibly two or three weeks have elapsed. Sow a Trap Crop. It will be found of much value to.

HANDY RACK TO CARRY HOGS

Hinged Partitions Particularly Useful
in Hauling Animals of Dif-
ferent Sizes.

It is a very easy matter to haul hogs
in a well-made rack. The framework
is like that of a hayrack. The floor

Rack for Hauling Hogs.

is laid level on top of the bolsters.
The rack is just a big crate built on a
level floor. There are two partitions
with hinged gates, which make it pos-
sible to haul hogs of different sizes
and save loss from "piling up" on the
way to market.

PREVENT HAY FROM HEATING

Department of Agriculture Experts
Recommend Use of Ventilators
of Latticework.

Hay, especially alfalfa or clover, is
likely to suffer damage through heat-
ing in the barn. This can be prevented
by ventilation. To ventilate a hay barn
the United States Department of Agricul-
ture experts recommend the use of
lattice ventilators 12 to 15 inches
square and as long as convenient. These
ventilators, which look some-
what like elongated crates, are made
with corners consisting of 2 by 4
scantlings slatted together with nar-
row boards 12 to 15 inches long. They
should be braced to prevent crushing.

The ventilators are laid in the hay
10 or 12 feet apart horizontally and
far enough apart vertically so that the
distance will not be more than 8 or 10
feet after the hay has settled. The
ends should come out to the edge of
the hay so as to permit free passage
of air. This will permit the carrying
off of steam caused by evaporation and
will preserve the hay and prevent over-
heating. The ventilators can be made
of various sizes of material, and, if
strongly constructed, will last many
years.

CARE OF LAWN IS IMPORTANT

Mowing, Rolling, Fertilizing and
Watering Have Tendency to Ex-
clude Noxious Plants.

The general care of the lawn is im-
portant in controlling all lawn weeds,
including crab grass, United States
Department of Agriculture experts
say. Mowing, rolling, fertilizing, and
watering, in other words, everything
which contributes to the growth of
the desired grasses, will tend to ex-
clude weeds. Purchased manure, be-
cause of the seeds contained, is a
frequent source of weed infestation in
lawns. In sowing, the seed used
should be as pure as can be obtained.

Notice To Parents And
Guardians

You will please take notice
that section 998-997, Article
XVII, and section 1017-1019
1020 and 75 1-2 of the 1921
School Laws provide as fol-
lows:

Children to Attend School

Section 753. In all districts of
this State all parents, guardians,
and other persons having care of
children shall instruct them or
cause them to be instructed in read-
ing, writing, spelling, English
grammar, geography and arithmet-
ic. In such districts every parent,
guardian, or other person having
charge of any child between the
ages of eight (8) and eighteen (18)
years, shall send such child to a
public, private or parochial school
for the entire school year during
which the public schools are in
session in such district: Provided,
however, That this chapter shall
not apply to children over fifteen
(15) years of age where such child
shall have completed the eighth (8)
grade or may be eligible to enter
any high school in such district, or
where its help is necessary for its
own use or its parents' support or
where for good cause shown it
would be for the best interest of
such child to be relieved from the
provisions of this chapter, Provided
further, That if a reputable physi-
cian within the district shall certify
in writing that the child's bodily or
mental condition does not permit
its attendance at school, such child
shall be exempt during such period
of disability from the requirements
of this chapter. It shall be the
duty of the superintendent of the
school district, if there be such
superintendent, and if not, then the
county superintendent of schools to
hear and determine all applications
of children desiring, for any of the
causes mentioned here, to be ex-
empted from the provisions of this
chapter, and if upon such applica-
tion such superintendent hearing
the same shall be of the opinion
that such child for any reason is
entitled to be exempted as afore-
said, then such superintendent shall
issue a written permit to such child,
stating therein his reason for such
exemption. An appeal may be taken
from the decision of such super-
intendent so passing upon such ap-
plication to the probate court of the
county in which such district lies,
upon such child making such applica-
tion and filing the same with the
clerk or judge of said court, within
ten days after its refusal by such
superintendent, for which no fee to
exceed the sum of One Dollar
(\$1.00) shall be charged and the
decision of the probate court shall
be final. An application for re-
lease from the provisions of this
chapter shall not be renewed often-
er than once in three months.

Juvenile Disorderly Person Defined

Section 1019. Every child within
the provisions of this chapter who
does not attend school, as provided
in the preceding section, or who is
in attendance at any public, private
or parochial school, and is vicious,
incorrigible or immoral in conduct
or who is an habitual truant from
school or who habitually wanders
about the street and public places,
during school hours without law-
ful occupation or employment, or
who habitually wanders about the
streets in the night time, having no
employment or lawful occupation,
shall be deemed a juvenile, disorderly
person, and be subject to the
provisions of this chapter.

Same: Complaint: Hearing and Commit-
ment

Section 1020. When a child shall
be a juvenile disorderly person
within the meaning of this chapter,
the truant officer, or any school
teacher, or other reputable person
may make complaint in the Probate
Court of the county in which such
child resides. The Probate Court
shall hear and determine such com-
plaint and if it is determined that
such child is a juvenile disorderly
person within the meaning of this
chapter, he or she shall be com-
mitted to a children's home, if eligible,
or to the Idaho Industrial Training
School, or to some other training
school, taking into account the
years of the child with reference to
the institution selected. Any child
committed to a children's home, on
its being shown to the judge of said
Court that it is incorrigible and
vicious, may be transferred to the
Industrial School or other proper
institution. No child committed to
any reformatory shall be detained
beyond his majority, and may be
discharged sooner or paroled by the
trustees or board of control under
rules and restrictions applicable to
other inmates. Any order of com-
mitment may be suspended by the
judge of the Probate court during
such time as the child may regular-
ly attend school and properly con-
duct itself. The expense of the
transportation of the child to the
juvenile reformatory shall be paid

by the county from which the child
is committed.

Encouraging Delinquency a Misde-
meanor

Section 1017. In all cases where
any child shall be a delinquent
child, a juvenile delinquent person,
or a juvenile disorderly person, as
defined by this act, the parent or
parents, legal guardian, or person
having custody of such child, or
any person responsible for, or by an
act encouraging, causing or con-
tributing to the delinquency of
such child shall be guilty of mis-
demeanor, and upon trial and con-
viction thereof shall be fined in a
sum not to exceed three hundred
dollars (\$300) or imprisonment in
the county jail for a period of not
exceeding six months or shall suffer
both fine and imprisonment the
court may impose conditions upon
any person found guilty under this
act, and so long as such person
shall comply therewith to the satis-
faction of the court, the sentence
imposed may be suspended.

School Trustees to Report Delinquents

Section 1022. It shall be the duty
of the board of trustees of each
school district to report to the
county superintendent all cases of
truancy, delinquency, and incorrigi-
bility which arises within their re-
spective districts, and such county
school superintendent shall immedi-
ately report such cases to the judge
of the Probate Court.

Census List

Section 993. It shall be the duty
of the clerk of the board of school
trustees of each district, on or be-
fore the third Monday in Septem-
ber, to furnish or cause to be fur-
nished to the head teacher of the
schools in his district a list of all
the children in the school district
between the ages of eight (8) and
eighteen (18) years, said list to be
taken from the report of the
school's census marshal for the
current year.

Duty of Teachers

Section 994 It shall be the
duty of the head teacher of each
district to check or cause to be
checked the enrollment of the school
against the report furnished by the
clerk as aforesaid and to report to
the county superintendent all pupils
not in attendance who are within
the ages of eight (8) and sixteen
(16) and who have no release from
school.

Absentees to be Reported

Sec. 995. At the beginning of each
month thereafter it shall be the
duty of such head teacher to report
to the county superintendent, the
names of all children between eight
(8) and sixteen (16) not bearing
releases who have failed to attend
school during the preceding month.
It shall be the duty of the county
superintendent to refuse to coun-
tersign the teachers' warrants until
such reports are made as herein
provided: Provided, That dis-
tricts having a superintendent of
schools shall not report to the county
superintendent but shall proceed
through their district superinten-
dent in the same manner as herein
provided for county superinten-
dents.

Duty of County Superintendent

Section 996. Upon the receipt
of such report the County Superin-
tendent shall promptly give to the
probation officer the names of all
pupils who do not bear releases
from school issued by proper au-
thority.

Duty of Probation Officers

Section 997. The Probation offi-
cer shall serve due notice upon the
parents and guardians to place such
children in school. If said children
are not placed within school within
a reasonable time and are not en-
titled to bear a release, then the
child and the parents or guardian
shall be proceeded against as pro-
vided in the laws for the correction
of delinquent children. It shall be
the duty of the probation officer to
prefer such complaints. 32-41

PLACE FOR PUBLIC MARKETS

Many Municipal Enterprises Have
Failed Because of Poor Selec-
tion of Site in City.

Many public municipal markets have
failed through being improperly sit-
uated, it has been found by the bureau
of markets of the United States De-
partment of Agriculture. A retail mar-
ket should be centrally located in or
as near as possible to the main shop-
ping section, where street car facilities
are good, specialists say. On such a
site the public market would be avail-
able to the greatest possible number
of people.

WATER OF MUCH IMPORTANCE

Big Factor in Development of Poultry
on Free Range—Adequate
Supply Needed.

The watering of the free range poul-
try is an important factor in their de-
velopment. Allowing birds to be with-
out water for a few hours on a hot
summer day will seriously injure them
and retard growth. The water supply
must be adequate.

The only stuff
Without a kick
That will
Satisfy
Your thirst
In hot weather.

PERRYMAN'S

How About This?

It has just been published that the members of
the Northwest Wheat Growers Association received
an average price of \$1.04 to \$1.06 for their wheat
consigned last season to the Association. This being
the average on about three million bushels of wheat.

The Vollmer Clearwater Co. bought the same
season about one and one-half million bushels from
the farmers in this territory and delivered to their
warehouses. On this amount of wheat the farmer
was paid by us an average net price of \$1.53 per
bushel, as per list here given.

AVERAGE PRICE PAID AT:

Agatha	\$1.78	Lewisnon	1.55
Asotin	1.68	Myrtle	1.48
Cottonwood	1.47	Pardee	1.15
Culdesac	1.60	Reubens	1.28
Fenn	1.53	Stites	1.34
Ferdinand	1.34	Sweetwater	1.70
Genesee	1.65	Craigmont	1.31
Grangeville	1.53	Craigmont Mill	1.52
Kamiah	1.56	Kendrick	1.68
Kooskia	1.78	Kooskia Tram.	1.45
Lapwai	1.82	Lenore	1.61

This is nearly 50c per bushel more than the
Association realized for wheat belonging to their
members. A great deal of the wheat in our ware-
houses was sold on our ADVICE to "sell your
wheat". The question is WHO GOT results for
their customers?

The wheat we handled realized nearly one-half
more than the wheat handled by the Association.

Our books are open to support our statements.
There is not much question as to who got best
RESULTS. We have been in business many
years and get the results. All our information is
open to the farmer and our margin of cost of hand-
ling is less than the Association shows.

The Vollmer Clearwater Co.

A Savings Account

At this bank is a form of an
investment for the money saver.

It never slumps in value; its
integrity is unquestioned; the re-
turn is certain; the principal is al-
ways available; the promoter can-
not reach it; it has no element of
speculation; it offers the surest and
the most direct way to accumulate
a capital for business, for home-
making or building, and for making
permanent and profitable invest-
ments under one's own control.

You can open a savings account

News Items of Local Interest

Mr. and Mrs. DeBolt and little daughter returned to their home in Lewiston last Friday after visiting Mrs. DeBolt's mother, Mrs. W. Cain, on American ridge.

Mrs. Arthur Davis of St. Johns, Wash., visited at the home of Mrs. Hood, Friday and Saturday.

Mr. and Mrs. Thos. McDowell and little daughter and Mr. and Mrs. N. B. Long spent Sunday on Potlatch ridge at the Tom Daugherty home.

The ice cream social given by the members of the Epworth League of the Methodist church last Saturday evening, was a decided success both socially and financially. The park was prettily decorated with colored lights and bunting. Over \$20 was realized from the sale of refreshments.

A. E. Wilcox took a brief vacation this week from his arduous duties at the depot. He went to his ranch above Orofino to look after his interests there.

Charles Riggie and son, Delbert, have been seriously considering the proposition of installing a steam laundry in Kendrick, large enough to look after the needs of Kendrick and surrounding territory. It ought to prove a profitable enterprise and would be a fine thing for the community.

Wallace McKeever was in Moscow Thursday on business.

Chris Maier started his threshing machine on American ridge the first of the week and George Davidson's machine was started Wednesday. Better yields than expected are the reports from this ridge. Harry Langdon's oats averaged 34 sacks to the acre and his wheat turned out several hundred more sacks than he was looking for. Most of the wheat is of the Jenkins Club variety. A report was received yesterday morning to the effect that 12 acres of wheat grown by Clifford Davidson yielded 44½ bushels to the acre.

Wade Keen and family of Spokane will spend the remainder of the summer on American ridge. They are living in the John Roberts house, having rented their place in Spokane for the summer. Wade is planning on a big hunt this fall as he has an elk in the woods that needs killing.

At the American Legion convention held at Kellogg, August 4, 5 and 6. Attorney R. D. Leeper of Lewiston was elected commander of the department of Idaho.

Where the new Pacific Highway crosses the Canadian border at Blaine, Washington, a gateway is being erected to commemorate 100 years without fortifications or armies along the 3,000 miles of international boundary. Inscribed over the doorways are the legends, "Open for 100 Years," "May These Doors Never Be Closed."

Mr. and Mrs. G. F. Walker were Peck visitors over the week end.

Some women have no patience. A Kansas wife wants a divorce merely because her husband left a while back and hasn't been home for thirty years.—Lewiston Tribune.

There will be a piano recital by the pupils of Prof. and Mrs. W. W. Gatenby at the Methodist church of Juliaetta, August 30. Those from Kendrick who will take part in the recital are as follows: Division 1. Artilee Hollada, Wilson Rogers, Alberta Walker and Dorothy Erickson. Division 2. Evelyn Hanson. Division 3. Dorothy Stanton and Edith Dammarell. Mrs. Leo Raaberg will also take part in the program.

Mr. and Mrs. Ira Bolon returned the first of the week from their vacation trip in the Grangeville country. While there Mr. Bolon caught some fine trout in Whitebird creek.

A brush and timber fire, started from burning a stump, burned over quite an area at the head of Pine Creek canyon on Bear ridge. The fire started Wednesday evening and for a time it was feared that crops and buildings on the ridge were in danger. Back-firing was resorted to and Thursday afternoon the fires was fairly well under control.

A fire on the point of American ridge near the George Torgeson place, which was plainly visible from Kendrick yesterday afternoon, occasioned considerable speculation. It was thought to be a burning threshing outfit but later reports stated that a fire started in Harry Langdon's stubble field and burned a straw stack. The report is to the effect that over 300 sacks of wheat and oats were destroyed.

Mrs. Lathrope and Mrs. Pound of Clarkston spent Wednesday afternoon at the home of Mr. and Mrs. Leo Raaberg. Mrs. Lathrope is Mr. Raaberg's mother.

Mr. and Mrs. J. C. Bibb have purchased an acre and a half of ground, well improved, in Clarkston. They expect to move to their new home next week. The place is located on the proposed Lewiston-Pomeroy highway near 13th Street. The many friends of the Bibb family in Kendrick will regret to see

them leave, but will be glad to hear that they are to be so pleasantly located.

Paul H. Morton of Spokane was in Kendrick Wednesday and spent the afternoon at the home of Mr. and Mrs. Ralph Knepper.

Dr. Kelley went to Lewiston Thursday to bring his wife home from the hospital. Mrs. Kelley has been in the hospital two weeks, and is feeling very much better.

Mrs. Hollada and three daughters returned from Pullman, Wednesday evening, after spending several days visiting with friends and relatives.

The Carlson, Béchtol, McConnell and Knepper families spent the week end camping below Elk River near the falls. Mr. Carlson and Mr. McConnell supplied a greater part of the fish for the camp.

Carl, Emulus and Buster Brown returned Tuesday from their fishing trip on the North Fork near Big Island. They said the fishing was good about three miles above the island and they had little trouble in filling their baskets.

Sid Diels says that a field of wheat threshed on C. Maier's place yesterday afternoon averaged close to 50 bushels to the acre. The crops generally on American ridge are very good this year.

The funeral of the infant son of Mr. and Mrs. Mike Forest was held last Monday, the burial service being performed at the Kendrick cemetery.

Dr. Moser was transacting business in Kendrick yesterday. He and his family returned a short time ago from a trip up the Little Salmon between Whitebird and New Meadows. The last time the Doctor was in Kendrick, when he was planning the trip, he called the writer a "kill-joy" and other mean names for the things we said about the road along the Little Salmon. We would like to have his version of this "beautiful highway" since he has traversed it. Wade Keen, who also traveled this road last month said it was just as bad as we said it was, only worse. Anyway, the Doctor had to walk seven miles to get his fish, while we got all we wanted right close to the road along the banks of the Little Salmon. Of course experience and knowing just where to look for fish, is what counts. It saves lots of steps.

Big Bear Ridge

Mrs. W. W. Reid returned home last week, from a visit with relatives in Spokane.

Mrs. H. Dahlberg and children of Leary are visiting her parents, Mr. and Mrs. J. J. Slind.

Mrs. H. Larson and sons spent last week at the home of her brother Louis Aas in Deary.

Joe Bowers Olson Bros. and W. H. Fairfield have begun threshing on the ridge. Grain cutting will be finished this week which is about two weeks earlier than in previous years.

Miss Inez Johnson of near Troy

has been engaged as teacher of the Rimrock school.

Misses Anna and Josephine Hoxeng returned to their home at Volin, South Dakota, Wednesday having visited at the home of Miss Johanna Hooker.

P. A. Norman and children of Deary spent Sunday with Mr. and Mrs. Halvor Lien.

The Clarkston oil well seems to have sunk out of sight.

CARD OF THANKS

We wish to thank the kind friends and neighbors for the help and sympathy during our bereavement.

Mr. and Mrs. M. Forest.

What to Do When Bilious.

Eat no meats and lightly of other food. Take three of Chamberlain's Tablets to cleanse out your stomach and tone up your liver. Do this and within a day or two you should be feeling fine.

Temperamental.

Six-year-old Bessie, returning from church and eager to tell the news, said, "Oh, mother, we have a new terror in the choir."—Boston Transcript.

PEPPER PLANTS NEED EXTRA CARE TO GROW

Few Plants Required by the Average Family.

Prepare Seed Bed by Forking or Spading to Depth of 8 or 9 Inches, Working in Well-Rotted Manure and Fertilizer.

(Prepared by the United States Department of Agriculture.)

Sweet peppers, sometimes called Chinese peppers and Mammoth peppers, are becoming more and more popular as a crop for planting in the home garden. Only a few plants are neces-

sary to supply the family of average size with all the peppers they will want, but it takes good land and extra care to produce peppers of high quality, say garden specialists of the United States Department of Agriculture. Pepper plants are easily injured by cold and the plants should be started in the house, in a hotbed, or in a greenhouse. Perhaps the best way is to purchase a dozen or so good plants from some seedsman or plant grower.

In preparing the soil for peppers, first spade or fork the land over to a depth of eight or nine inches. At the same time work in some well-rotted manure and a large handful of commercial fertilizer to each square yard of space. This should be done at least a week before the pepper plants are set out. Then loosen the surface thor-

oughly at the time the plants are set. Frequent cultivation is necessary, and an occasional application of weak liquid manure to the soil around the plants will keep them growing vigorously. Large, tender peppers can only be produced on thrifty plants, and in order to keep the plants producing all the peppers should be kept picked off and none allowed to ripen.

Ruby King, Chinese Giant, and Large Bell or Bull Nose are among the leading varieties of the large sweet peppers. Pimento peppers are mild in flavor and are largely grown in the Southern states for making the pimento pickled peppers. The pimento peppers can be used in the same way as the regular sweet peppers, or they may be left on the plants until red ripe, then used for canning.
