Drink it down, down, down.!

#### In The Justice Court

Two prune pickers, transients, were arrested Monday morning and taken before Judge Hull charged with stealing a blanket from the McLaughlin home on American ridge. As they were "caught with the goods" they pleaded guilty. money they had and learned that their total cash resources netted either the Judge or Marshal Gardner, was left to defray costs of arrest and trial. The suit of clothes is considered rather unstable security as the original owner might crop up and demand their return.

#### New Wheat Seed Named "Mosida"

#### Agronomy Department Distributes New Variety.

Seed of a new wheat is being distriuted to a limited number of Idaho farmers by the department of agronomy of the Idaho agricultural experiment station. This wheat variety is named "Mosida," and is a cross between Turkey and Fultz-Mediterranean. The name chosen by Prof. R. K. Bonnett, agronomist, is a contraction of Moscow-Idano, the source of the variety.

"Mosida," which was first protollows: Florence and Grace Poolton duce at the Colorado experiment station, was brought to Idaho by The seventh grade reading class is Prof. G. S. Ray, former agronomist, years, the yield being improved and the final selection made.

The new wheat is an awnless hard winter wheat with white chaff. In winter it is hardy and will not head if spring sown. It is an resistant to The lifth grade arithmetic class is bunt and about as early as Turkey. #### Laundry Shower

Wednesday evening the Okoke Klootchman Club ladies gave a "Laundry" shower at the home of of the local Oddfellows lodge and Mrs. A. V. Dunkle in honor of Mrs. McConnell who recently lost her laundry from the line. Mrs. | sell, Presbyterian minister of Lap-Dunkle cleverly carried out the laundry idea by having a "stranger from Cedar Creek" knock at the door during the evening announcing that the McConnell laundry basket and all, had been found under the Cedar Creek bridge. The basket was then presented to Mrs. McConnell, who opened the packages, which were found to contain various household articles such as towls. handkerchiets, pillow cases, sheets.

An amusing luncheon menu was carried out with favors of Irish biddies made trom clothespins, menu cards from laundry lists, the luncheon consisting of 1 pair salad, 1 dressing of pineapple, starch sandwiches (bread and cheese), bluing, (grape juice), soap chips, (choc

After a pleasant evening all voted Mrs. Dunkle a clever hostess.

Total state tax

"No successful big business institution is conducted without a careful budget". stated Governor C. C. Moore recently. "The state of Idaho with valuations of nearly a half billion dollars with expenditures for government, education, and other necessities amounting to approximately four million dollars per biennium must in my opinion budget its funds receivable, and not take on great burdens to the tax-payers which the valuation of the state cannot support.

"History tells us that the great revolutions of the world have been caused primarily by excessive burdens of taxation to support top-heavy governments in luxury. Excessive taxation soon becomes confiscation and the expense of government should be held down in proportion to the citizens' ability to pay. The Budget Bureau will aid us immensely in this respect in conducting the largest business in the state."

#### Kendrick a Lumber Town

Kendrick is becoming more of a lumbering center every year. TOBACCO

## LEGION TO FIGHT HUGE AIR FORCE

to Curb Planes.

#### ACT TO SAVE U. S. BILLIONS

Allied veterans of the World war may bring about the holding of an international air conference to limit military aircraft armament and end the present race for superiority in prog-

ress among the nations of Europe. Alarmed at the air preparations being made by France, England, Italy and Russia, the American Legion delegates to the Interallied Veterans' federation convention in Brussels will wage a determined fight to induce delegates from all countries to influence their governments to participate in an international meeting to reduce air armaments.

The Legion charges that France, by embarking upon the most stupendous air program in the history of the world, has started a mad conflict for mastery of the air from a military standpoint which threatens to disturb world peace. Leaders of the veterans' organization have determined to make all efforts to curb this demonstration of militarism on the part of their former allies.

#### To Ask Air Disarmament Meet.

To this end the Legion will ask President Coolidge to call an air disarmament conference in Washington, similar to the conference on naval limitation held in 1921.

There is no exaggeration in regard to the seriousness of the situation, according to the Legion leaders, who point out that France has 140 squadrons of military flying machines and intends to have 220 squadrons by 1925. Included in the armament, they state, are planes which carry 75-millimeter cannon, others that can transport six machine guns and their crews, enormous bombers, special fighting ships armored with battleship steel and actual troopships of the air. England, which has voted an extra \$27,500,000 to enlarge its air armada, is France's nearest competitor, it is stated, while Russia plans a force of 10,000 planes and Italy has created a separate air service with plans for extensive expinsion.

#### Acts to Save U. S. Billions.

It is the Legion's desire to hold the conference before it becomes necessay for the United States to appropriate billions of dollars for construction of military aircraft to cope with the situation created by the activities of foreign powers.

. Alvin Owsley, national commander of the Legion, just before sailing for Europe to attend the veterans' conference, expressed the situation as follows:

"The conference on naval limitation at Washington in 1921 went a long way to persuade the world's mind toward peace upon the waters. Land forces, too, are fast being reduced. It is only in the air that danger threatens. France has equipped herself with an air fleet which is equal in power to the combined air forces of the rest of the world. The French minister of war declared his country is tired of being a battlefield and is preparing, should war come again, to carry the battle immediately into the enemy's country.

#### Britain Becomes Alarmed.

"At' this the British across the channel have taken alarm. A former cabinet minister declares that France with her tremendous air forces could destroy London tomorrow. So the British vote additional millions of pounds and set out to build as great an air force as France has. Premier Baldwin says England must be prepared 'against attack by the strongest air force within striking distance.' It is France against whom England thus prepares. The British admit it "Along comes Italy, and after sign-

ing the Washington naval treaty and greatly diminishing her land force and announces the establishment of a separate air force and votes large credits to expand it as soon as possible into an effective war force. "By these means is the peace of

mind of Europe disturbed and the peace of the world threatened. The allied partnership, which should be preserved intact to deal with the great problems of the hour, which is as necessary to civilization, now is strained and endangered. The American Legion feels there is a way out. Let this mad race for supremacy in the air be ended as the mad race for supremacy on the seas was ended. It is foolhardy to contend that it cannot be

#### MARSH FILLED WITH DUCKS

Thousands of Water Fowls Nake Their Home in Hay Bottom. In the wide artesian marsh of

Crook and Creek valley, three miles east of Meade, Kan., thousands of wild water fowls are making their home. In many places the ducklings are so numerous that one can scarcely make his way through the tall grass without stepping on them.,

From the present outlook this marshy region will be a hunter's paradise the coming fall and winter. There are several thousand acres in this immense hay bottom, and it has long been a famous resort and nesting place for aquatic fowls during flood

## U. S. SPENDS HUGE SUM TO RULE US

Delegates to Brussels Meet Seek | Cost of Governing Has Doubled in Last 10 Years.

#### \$100 PER CAPITA ANNUALLY

Government is now costing approximately \$100 a year for each man, woman and child in the United States.

Compilations being made by the United States census bureau at Washington as to federal, state, municipal and county taxes have progressed sufficiently to warrant the broad statement that the average per capita cost of government of all kinds in this country is about \$100 annually.

If this cost were spread evenly over the 110,000,000 inhabitants of the United States, there would be many families whose entire earnings would be taken for government alone, leaving nothing for food, clothing, housing and the other necessities of life. Many families of five in this country do not have a total income of \$500 a year, which would be its cost for government on a straightout per capita basis.

Enormous Local Increases.

Figures now in the hands of the census bureau officials show enormous increases in local taxation, state and municipal, during the last decade. The latest figures are for the year 1922. but those serve to show that in the last ten-year period state taxes have more than doubled, while the municipal taxes of many cities have trebled. Complete figures are available for seven states and about fifty of the largest cities.

Most of the cities run around \$60 per year, but a lower per capita cost of county government to persons living in the country tends to cut down the average throughout the nation.

Senator Reed Smoot of Utah, known as "the watch dog of the treasury' and the "statistical wizard of congress," because he has specialized on money problems of the United States. both in the appropriations of billions of dollars annually and the collection of revenue to make the payments possible, says that the people of this country have several weapons in their hands which may be used in beating down the ever-mounting costs of government. Here are the major points of the program he outlined:

#### Puts Budget System First.

1-United support of the American people for the budget system, even though it means the loss of an appropriation for some particular thing the community is interested in. The budget has accomplished great economies in the few years it has been in use by the United States government, but it will stand or fail according to the support it receives from the people.

2-Adoption of a constitutional amendment to prohibit further issuance of all tux-exempt securities. Senator Smoot holds that the present system not only allows the wealthy to escape their fair share of the financial burden of government by putting their money into tax-exempt securities, but the favorable market afforded such securities is a constant incentive to state and federal governments to spend.

3-Any new proposal for joint federal-state aid should be rejected out of hand, no matter how meritorious it may seem, according to Senator Smoot. The plan whereby the federal government matches dollar for dollar appropriations made by the various states for good roads and similar improvements is already costing the United States tens of millions of dollars annually, but its worst evil, as Smoot sees it, lies in the fact it often encourages states to make expenditures they cannot afford on the false premise that it costs them only half

4-When new propositions for expenditures are advanced. Smoot would have the fact emphasized to the taxpayer that in the last analysis it is he who pays the bill. To put the idea in the words of the Utah senator, "Let the taxpayer ask himself not just whether it is a worthy object, but whether it is worth the

#### Effect on Living Cost.

While the tax burden is not distributed upon a per capita basis, the fact that \$100 a year goes to government for every person in the United States means that it enters into the cost of living in some form or another for the rich and poor alike. The present high cost of living is attributable in no small degree to the high; cost of government.

The analysis of costs of government have been completed for Wisconsin, Rhode Island, New Jersey, Minnesota, Michigan, Kentucky and Illinois, and the statisticians are at work on others. Here are the per capita costs of

state government: Wisconsin, \$12.52 in 1922, \$6.41 in 1915; Rhode Island, \$11.84 in 1922, \$6.12 in 1914; New Jersey, \$16.91 in 1922, \$6.58 in 1915; Minnesota, \$17.06 in 1922, as against \$7.54 in 1915; Michigan, \$24.07 in 1922, \$5.66 in 1914; Kentucky, \$7.74 in 1922, \$3.69 in 1914; Illinois, \$7.83 in 1922, \$3.16 in 1915.

The cost of government in the cities shows even greater increases than. those of the general state governments.

New York, Providence, Jersey City and San Francisco all run well over \$100 per capita as the cost of government without even the cost of state government being agured in.

#### Proves Lobster Goes

#### Mile-a-Day Under Water Hartford, Conn.-Proof that a lob-

ster is capable of traveling at least a mile a day under water has been established by a record of a certain lobster kept by the state hoard of fisheries and game. The board has undertaken to tag every ripe egg-bearing lobster released by its agents. A lobster released at Noank on July 14 was caught at Waten Hill, nine miles away, on July 23.

Chicago People Move Often. Chicago. - About 1;285,000 people change their dwelling places in Chicago every year, according to statistics compiled here. These totals were reached by figuring four and one-quarer members to a family, and the rec eds show that more than 200 eep famlies move annually.

#### RATS STAGE DOPE ORGY; U. S. AGENTS GET BUSY

#### Rodents Eat Narcotics Stored in Building at New Orleans.

New Orleans.-Sleuths of the narcotic enforcement division, whose duties, among other things, include the running down of "dope" peddlers, have directed their attention to something new-the rodent "dope" fiend.

Until a few months ago, it seems, the rats which infest the federal building were nice, gentle, home-loving rodents, but recently something happened. Slowly a wave of destruction swept through the building. Offices were found in turmoil. Records were gnawed to scraps. Crowded desks were swept clean of papers and books. Shiny desk surfaces revealed countless rat tracks, mute testimony of midnight orgies.

W. F. Ferguson, assistant custodian, arged to action by scores of complaints, purchased 150 traps and baited them with the smelliest cheese obtainable, crisp bacon and even chunks of porterhouse steak. Only one young and inexperienced rat was eaught. Regular rat food had lost its

Narcotic sleuths recalled that it was about the time they had first stored marijuna, commonly known as "muggles," in their offices, that the rat destructiveness began. Also they recalled that a large quantity of "muggles" had disappeared.

The agents examined their stores of confiscated cocaine and morphine. Packages had been gnawed open and the imprint of rat noses found in the open boxes. "Dope" worth thousands of dollars was gone. The rats, they suggested, apparently had first become enmeshed in the tentacles of the "dope" monster when they chewed on the "muggles," shattered nerves forced them to the cocaine and then to the morphine.

Large steel boxes were purchased to hold the stores of the narcotics. Special traps were ordered built, and when these are ready they will be haited with morphine and cocaine, Mr. Ferguson said.

The possibility of rats spreading the "done" habit is to be investigated by officers of the United States public health service, it was said.

#### Crew of U. S. Schooner

#### in Fight With Natives

San Francisco.—The schooner Lottie Bennett sailed in through the Golden gate recently flying the Stars and Stripes as mute evidence of an American crew's victory in a desperate hand-to-hand battle fought off an island in the Pacific with South Sea islanders led by an Englishman, according to members of the vessel's crew.

The Lottie Bennett, en route from Niuatobutabu to this port with a cargo copra, dropped anchor off the island of Nieufua in the Tonga group, just as a terrific equatorial storm blew up. Capt. Neils Jensen and his crew of ten went ashore to escape the gale.

After the gale blew itself out, Captain Jensen and his crew prepared to return to their vessel but were greeted by wild yells and a shower of missiles from the ship. Then, according to their story, an English plantation manager named Ramsey, one of the two white men living on Nieufua, informed them he had found the vessel in an abandoned condition and had taken possession of it.

Clambering up hawsers and anchor chains, the Americans boarded the vessel and battled the British leader and his crew, although the natives outnumbered the Americans nearly three to one. The Americans finally threw the natives overboard, put handcuffs

## RATS USED TO AID THE HUMAN RACE

Effects of Diet Studied by University Professor.

#### GIVES NEW FACTS TO SCIENCE

Dr. E. V. McCollum, professor, of blochemistry in the School of Hygiene and Public Health at Johns Hopkins university, has put the rat to work at a task that may eventually mean longer and better life to man.

For fifteen years Doctor McCollum has been experimenting with ratsthousands of them-and discovering facts in the effect of diet upon growth, health and heredity. These facts, when enough of them have been assembled and studied, are expected to aid in establishing new principles in the science of nutrition.

Professor McCollum's luboratory has accommodations for 3,000 rats, though only 340 inmates are undergoing experiment this summer. When the visitor enters the room not a sound betrays the presence of a living thing.

Cages in rows line the walls and the floor, each heavily screened. Here and there the quick flirting of a tall shows that a cage is occupied.

Diseased Rats Destroyed.

All of the rats in the room are normal; healthy specimens. They are bred there at the colony. Any of the stock rats that show signs of becoming unhealthy before entering into experimentation are destroyed.

New arrivals at the colony, in the form of baby rats, are fed orange Juice from an eye dropper. As they grow larger their diet is changed, and when they have matured a regular diet is prescribed. This diet consists of 25 per cent wheat, 25 per cent maize, 29.5 per cent rolled outs, 10 per cent fluxseed oil meal, 10 per cent casein and five-tenths of 1 per cent calcium car bonate. Daily a bowl of milk is placed in each cage and twice a week the rats get cabbage or carrots. This, with the addition of tap water, is the diet upon which the stock rats thrive. When a rat enters the experimental stage dis tilled water is used.

#### Odd Effect of Diet.

Doctor McCollum has succeeded in bringing about, by means of diets, practically any condition of health desired. He can make the rat prematurely old, make it wild, make it tame, and even regulate to the day its span of life. Further than that he has proved that in many cases a rat's reaction to a certain diet will be identical with that of a man fed on the same diet. He says:

"There is perhaps nothing more worthy of careful consideration as a human problem than the suggestive results of the behavior of our experimental rats as modified by diet."

"The well-nourished rat," Doctor McCollum says, "when placed in a cage, wants to explore its surroundings. Its coat is sleek, its, eyes bright and it shows no signs of nervousness. After exploring its new home it does not manifest much activity, but is perfectly contented while on familiar ground."

To show that the healthy rat does not mind being handled. Doctor McCollum opens a cage, reaches in with bare hands, pulls six rats together by their tails and calmly lifts them out, holding them up for inspection, heads downward. They do not squeal and they make no attempt to bite.

Entirely different symptoms are exhibited by rats on a deficient diet. When the cage is opened they retreat to a far corner and show signs of fright. These rats are handled with a pair of long tongs, and it is often impossible to pick them up, because of their frantic jumping about.

The young of a mother rat suffering from malnutrition will develop the mother's symptoms, and after a few days will sit up on their haunches and squeal for hours. Death usually fol-

One of the experiments consists in feeding a rat a diet that is adequate in all respects but in its protein content. A growing rat fed on this diet will become dwarfed. If, after several months the diet is changed and a normal one substituted, the rat will once more start to grow. Even though it may reach full size, however, it will always be deformed in some way. A month-old rat is considered as mature as a three-year-old child.

1. Lengthening Life by Diet.

The average life of a rat is two years. Under proper diets, however, Doctor McCollum has lengthened this span to three years. He has also formulated diets that will determine, almost to the day, how long a rat will

Two sets of young rats will be taken and placed in different cages. All the rats will be the same age and of healthy stock. One cage will have one dlet, the other cage a diet almost identical, with the exception of one item. In some cases a very slightly different ratio will be made.

All of the rats will flourish. They will appear normal and healthy, and each group will make the same progress. At the end of six months, Doctor McCollum will have two cages of apparently healthy animals, but here the change begins.

The rats with the adequate diet will continue bright-eved and sleek conted. They will not become nervous, and will exhibit no undue atarm regarding their surroundings. The rats in the other cage will show signs of nervousness. Their coats will go without the atten-

tion usually given them, and eyes will become dull. Rapidly they become thin and emuciated, and are ready to bite the hand thrust into the cage. Soon afterward they die. The varying of this diet ever so slightly will produce like results, but lengthening or decreas ing the time it takes to accomplish the

Life of Rat Is Three Years. When a rat becomes old it exhibits signs of irritability. Its coat becomes rough, and its temper mean. Walking along the rows of cages one will sec. here and there, a rat that looks for all the world like a venerable grandfather of the rat colony. You are sure that it is at least three years old, which is the extreme length of a rat's life. Here again the experiments are to blame. The rat may be only three months or a year old. Diets containing certain things and lacking in others have made the rat prematurely old. One of the most notable experiments

deals with the mother rat and her young. Regulated diets will leave a female rat incapable of producing a family. Other diets will affect the young to such an extent that litter after litter will be brought into the world, only to die. A well-proportioned diet, on the other hand, will save every baby in ninety-nine litters out of every hundred.

Diet and Offspring.

Under normal conditions the mother rat is solicitous of her young. While properly nourished she will give them every attention. But when Doctor McCollum changes the diet, the mother will become nervous, and will eventually attack and destroy her family.

Experiments have proved that a diet adequate to maintain the mother in a heathy condition will allow her to care properly for her young. But as a mother rat is fed a diet that produces certain ailments or adverse conditions, these symptoms are invariably imparted to the baby rats in the mother's milk. If the diet is corrected, both mother and young may return to health. This also holds good in cases where the mother has destroyed the litter. After a mother has destroyed two or three litters, while on an insufficient diet, the diet has been changed to an adequate one, and the next litter has received the most careful attention from the mother.

The study extends down several generations of the same family. Rats fed on an inadequate diet, which at the same time will permit them to produce a litter, will die naturally. The second and third generations of the same family will have the same diet. and at the end of the third generation the family usually dies out.

Started Work Fifteen Years Ago.

Since Doctor McCollum started his experiments fifteen years ago, the importance of diet has been recognized more and more. By adding certain foods he has succeeded in creating a disease, and by substituting other foods he has accomplished the feat of correcting morbid conditions. He considers proper feeding the most important step toward the prevention of human ills.

One of the experiments has to do with the value of light in curing diseases. According to Doctor McCollum. a large percentage of school children In the United States are suffering from rickets. In many cases this iii has been contracted by the baby from the mother, while in other cases it is the result of improper diets. Tests have been made to determine just what diet is responsible for the condition. "In many cases," Doctor McCollum says, "the excessive amount of cereals consumed is responsible."

Outside of the rat laboratory is a big lawn. In the middle stands a stool and on the stool is a screened cage. One lone rat occupies the cage, and with the hot sun glaring down from above, seeks vainly for shade. The rat is suffering from rickets, as a result of improper diet, and now he is being subjected to another experiment which may cure him of the disease.

#### U. S. MAKES LARGEST LENSES

Bureau of Standards Completes Work From Domestic Glass.

The largest lenses ever successfully constructed from domestic manufactured glass have been completed by the bureau of standards at Washington. Declared by expert examiners to be perfect, they measure 12 inches in diameter and have a focal length of 12 feet 8 inches.

An unusual feature of the completed work is that it forms what is known as an "achromatic combination." Use of crown glass in one lens and flint glass in the other is said to bring light of all colors to a common focal point, impossible in lenses made of one type of glass. The instrument will be used by the bureau for conducting intricate experiments in the science of optics.

#### PINHOLES DRILLED IN STEEL

Delicate Device Is Used in Manufacturing Adding Machines.

Making an adding machine required the drilling of ten holes in a plate a thirty-second of an inch thick, each hole to be accurate to a thousandth of an inch, yet no bigger than a pin in diameter, says the Washington Star. The result was a most ingenious machine that stands about 12 Inches high. The drill which was built carries ten spindles, each holding a drift of number six Morse gauge, which is about

the size of the pin of ordinary use. Each little sliver of steel that does the work is driven by a belt operating through a cam head and therefore works at the same speed as that of its neighbors. The actual drilling requires ten seconds.

# HIB GALLE

I will sell at public auction at my place 2 miles west of Crescent, known as the old Worsley place, the following described property:

SALE BEGINS AT 10 O'CLOCK SHARP

## MONDAY,

Horses, Cattle and, Hogs

Team bay mares weight 2600; team weight 2,000, all good work horses. Five good cows, 4 of them giving milk, 2 fresh in November; 7 calves and 1 yearling heifer.

Two good brood sows, 1 with litter of pigs; 7 pigs weight 35 pounds each; 4 shoats weight 150 pounds each. Three Hampshire ewes and 1 buck. 40 White Leghorn chickens.

Farm Implements

Blacksmith outfit good as new; Milwaukee 7 foot binder, 3 inch Moline wagon, 8 foot Peoria drill, disc harrow, 2 section drag harrow, spring wagon, disc gang plow, 14 inch walking plow, galvanized 5 barrel tank, grain rack, 2 sets work harness, bobsled.

#### HOUSEHOLD GOODS

Edison phonograph, library table, 3 rockers, 2 genuine leather; dining table, 6 chairs, Colonial buffet, breakfast table, 2 bedsteads, kitchen table, 2 mattresses, 2 springs, mantle clock, Sharples cream separator, 2 good 9x12 rugs, cream can, wood heater, 500 quarts of fruit and other articles too numerous to mention.

## Lunch Will be Served on The Grounds

Terms: All sums under \$20.00 cash; all over that amount approved notes bearing 10 per cent interest and due October 1, 1924.

#### PLANTS OFFER BAIT TO GET HELP FROM ANIMALS

Botanical Expert Describes Strange Power of Locomotion in Some Flora.

The animal kingdom and the plant kingdom have been thought of as separate worlds, but science is finding many connecting bridges. Dr. Fred J. Seaver of the New York Botanical garden staff, in a recent lecture said that it has now become absolutely impossible to separate the lower animals from the lower plants.

We think of the plant as stationary, while the animal is able to move about, but many of the lower plants, such as the diatoms, swim about in the water, while many of the lower animals are fixed, he pointed out.

Going higher in the scale than the humble diatoms, we find plants adopting the fixed habit, said the lecturer, while animals developed to a high degree the power of locomotion. This together with the fact that animals were largely dependent upon plants for food, had apparently resulted in many modifications of structure on the part of either the animal or the plant, or

Since higher plants were for the most part stationary, while animals were motive, it was necessary for the plant, generally speaking, to carry on a defensive warfare to keep from being destroyed by its hungry enemies. Many plants, especially the desert plants, had developed protective armaments of spines or thorns. Just how these devices originated, said Doctor Seaver, it was now difficult to say, but that they served their purpose could not be denied.

Again, since higher plants were unable to move about, many ingenious arrangements had been perfected for making use of the locomotary powers the distribution of their seeds. The spectacles.

appeal was usuarry made to the animal's desire for food, which was offered as bait. In securing the desired food, the animal was made to serve the plant. Brilliantly colored flowers acted as signals, while the nectar which they contained was offered as recompense for the assistance rendered.

Only Sacred Cat of India in America

of animals for performing some of one of its kind in America, is marked the necessary functions of plants. The like a zebra and is very intelligent. plants used the locomotary powers of That it has strained its eyes in its insects and other animals mainly in studious pursuits is indicated by the the pollination of their flowers and for fact that it is necessary for it to wear

Say That You Saw it in The Gazette.

### Superior Grain Drills

The secret of the success of any grain drill lies first, in the distributor, second in the furrow opener.

The Superior drill seeds evenly, every furrow opener makes a perfect roomy trench, plants every seed at an even depth, at an even space and covers it thoroughly.

For two generations the Superior grain drills have been the first choice of American farmers.

## A TEMPEST IN A TUB

Every woman who bends her back over a wash tub should see this demonstration. Positively proves that the amazing water action in the new Maytag Gyrafoam Washer cleans clothes twice as fast and with double the care.

Women everywhere are viewing this new principle with amazement. It is absolutely different. No words can describe it. No picture or photograph can properly show it. You must see it.

Come in today. We have one of these machines running. One look at the turbulent water will convince you that this is the greatest washer of all.

The tub is made of aluminum and will not rust, warp, rot or leak.

#### Youngest Auto Thief Captured in Kenosha

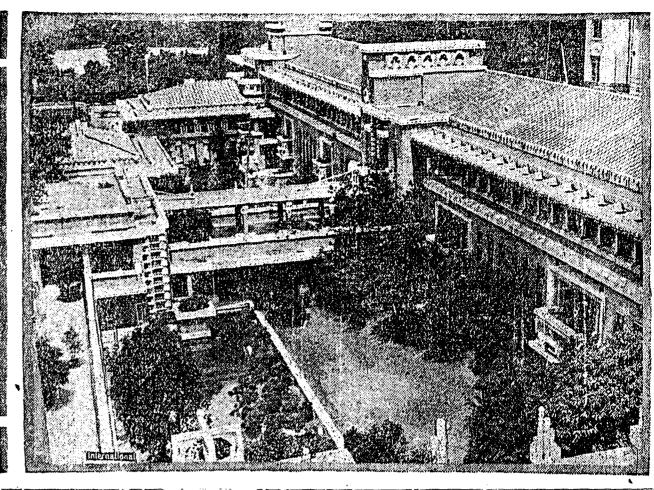

Kenosha, Wis.--If Eau Claire has the youngest horse thief in the state,

and Green Bay the youngest drunken anto driver. Kenosha claims the doubtful honor of having the youngest automobile thief. He is twelve-year-old Sam Salermo, whose career came to a speedy end here when he fortunately, or unfortunately, met with disaster mouth of the Danube. as he launched it by stealing an automobile.

The lad on circus day here jumped into a touring car of Toerkel Pedersen, a farmer, and drove it pell mell from the circus. In his buste to put distance between him and the owner of the car be forgot all about speed laws and crashed into another automobile. The other car was bodly damaged and young Sam was slightly in-

jured. What burt him most, however, was that he was unable to get away with the stolen car and will be sent to the industrial school at Waukesha. He admitted to the judge of the Javenile court that he had graduated from the class of bicycle stealing.

#### RHINE-DANUBE CANAL READY FOR SHIPS SOON

#### Vessels to Travel From North Sea to Black Sea.

Bamberg, Bavaria. FOR SALE or TRADE: 160 acres would have a bad half hour if he could ern half of his old empire to connect ships to travel from the North sea to the Black sea by inland waters.

The Rhine-Main-Danube canal, which was begun in 1921, contemplates a revolution in the transportation system of Europe, and indirectly of the

Freight routes will be changed, and cargoes loaded on ocean-going ships of not greater than 1,500 tons' capacity will be able to sail from Rotterdam to Galatz, at the mouth of the Danube, touching Cologne, Mayence, Frankfort, Nuremberg, Vienna, Budapest and Belgrade on their way to the Black

American cotton is promised a through trip from New Orleans to practically all the countries of central Europe which have no seaports, and new tourist routes are to be opened up for excursion steamers which will rival the Rhine trip in beauty and historic interest and make it possible for visitors to eliminate the annoyance of frequent changes from steamer to trains.

The new waterway will touch the territory of nine states: Holland, Germany, France, Austria, Hungary, Serbia, Bulgaria, Czechoslovakia and Rumania. But it is really more than a canal of continental Europe, as it will put all maritime powers in touch with central Europe, and afford a new entry to the Near East by way of the Black sea.

If the canal attains the success its promoters prophesy it will drain much business through Rotterdam into the heart of Europe which now goes past Gibraltar into the Mediterranean. Much business which now finds its way into the Black sea through the Turkish straits is also expected to Dan Jones and John H. Jones, enter the Black sea through the

Odessa, which lies only a short distance east of the Rumanian ports at the Danube's mouth, is expected to be greatly benefited by the new waterway.

#### MILLIONS IN GOLD TAKEN FROM TORPEDOED STEAMER

Divers Recover Nearly \$35.000,-000 From the Laurentic.

London.-All except a few bars of walls, dropped to the occasi bot wher lear and answer said complaint

a German submarine sank the Lauren covered by divers who since 1918 have been carrying on their labors 90 feet below the surface of the sea. The 30 bars remaining in the wreck, it is exnected, will be brought up within a

In addition to the gold which was consigned to American bankers, the Laurentic was laden with almost \$5,-000,000 in silver specie, mostly in 2shilling pieces, all of which has been point is touching gold or a base metal cost of suit. such as iron.

The clocklike dial is kept aboard the salvaging ship and is connected with a spear which is in the hands of a diver working 90 feet below the surface. The hand moves to the left of the zero mark when the spear is prodded against a piece of iron, copper or other such metal; but when it touches gold the dial swings to the right. It vecred further when it came in contact with an 18-carat bar than when it touched one of nine carats.

The apparatus was brought to the attention of the admiralty in 1920 by a college professor. Previous to that time the divers in three years of labor had recovered 608 bars, but since the galvanometer was brought into use more than 2,100 have been brought to the top, each bar being worth from \$5,000 to \$10,000, depending upon the standard of the gold and the size of the bar.

In the first years of the operation the divers sent up the treasures in the boxes in which they found them, but later these wooden chests rotted and the bars have since been salvaged separately.

The work of the divers, never very casy or safe, has been made harder by the activities of the hungry dogfish which seem to think that they are watchdogs of the wreck.

## SHERIFF'S DEATH RECALLS KILLINGS

Officer in the Bald Knobber Country in Missouri Had Lively Career.

Forsyth, Mo .- The death of James Polk McHaffie, seventy-seven years old, former sheriff of Taney county, in a hospital in Springfield, has removed one of the real pioneers of the Ozarks, around whose life some of the most exciting events of this hill country were associated. He helped blaze a trail of civilization and had exciting experience with the Bald Knobbers, the terrors of southwest Missouri in

the early days. The life story of McHassie, a picturesque character, is closely intercounty, near Sparta, in 1846, when the line of that county extended to the Missouri-Arkansas boundary.

In 1884 McHaffie was elected sheriff of Taney ounty. At that time the Bald Knobbers were a power in the hill country and were one of the many problems which were presented to Sheriff McHaffle for solution. He had been elected because he was known to be fast on the draw and fearless. Both of these qualities were put to severe tests before McHaffie completed his period of office.

Adventure With Bald Knobbers, Shortly before his death he told for the last time the story of an adventure with the Bald Knobbers. The sheriff said the Knobbers were originally organized for a good purpose, but later became dominated by men who encouraged outlawry.

It was during the administration of Sheriff McHaffie that Frank and Tubler Taylor were taken from the Forsyth jail and hanged by Bald Knobbers. The Taylors were known throughout the Ozark section for their escapades. One night they entered the store of John T. Dickerson at Forsyth and shot up the place. Dickerson was shot through the mouth and his wife was seriously wounded.

The offenders were apprehended and placed in the Taney county jail. That night the Bald Knobbers made their appearance. Sheriff McHaffie said there were approximately 150 men in the band. Several of the Knobbers leveled their weapons at the officer and ordered him to deliver the Taylor boys to them. McHaffle was forced to comply with this request, since the night riders had the drop on

The sheriff followed the trail of the Bald Knobbers after they left Forsyth and the next day found the bodies of the Taylor boys dangling from a tree. McHaffle said he had-often been criticized for surrendering the prisoners, but stated that any other action would have been foolhardy.

#### John Bright Lynching.

The John Bright lynching occurred at Forsyth in the early 90s, after the Bald Knobbers had disbanded.

Bright was charged with having murdered his wife and was placed in the Forsyth jall, under the care of Sheriff McHaffie. One night a mob surrounded the jail. Sheriff McHaffie hid out with the keys. The fury of the mob increased when its members learned that McHaffie had gone away with the keys and then proceeded to force an entrance into the jail. Deputy Sheriff George Williams attempted to prevent the mob from breaking into the jail and was killed. Bright was taken out and hanged. Indignation swept over this section because of the killing of Deputy Williams.

Later a memorial public library was established here in honor of Deputy Williams, but now it is practically

#### Portugal to Inaugurate

mez was elected president of Portugal friends and denied himself to visitors. on August 6 he was still the Portuguese minister at London. He will not be inaugurated until October 5. He has represented his country at the Court of St. James since 1911, and consequently took part in the negotiations that brought Portugal into the World war. In an interview he said:

"One would think to read the news from Lisbon that they had a revolution there every eighth day. This is not so. There are, to be sure, dissensions and uncertainties. My policy will be, in the main, one of unification—an attempt to bring the conflicting parties together on the common basis of the welfare of the republic."

The new president has written books and collected curios. Until the revolution of 1910, which turned the monarchy into a republic, he lived on his parents' estates in the country. His grandfather had cherished liberal sentiments and had suffered for them. His father was educated in France, and from him the future president got his republicanism. Senor Comez was dividing his time among farming, writing and collecting when the republic sent him to London as its first minis-

U, S. Has 178 Women Pastors. Chicago.-There are 178 women ministers in the United States, according to figures from the International Association of Women Preachers. Illinois leads all other states with 33 women pastors, of whom 17 are in Chicago. There are six women preachers in foreign lands.
