Entered at the post office at Kendrick as second class mail matter.

The J. C. Penny Stores, as a rule, are among the most successful merchandising institutions in the various towns in which they do business. These stores are among the largest users of newspaper advertising wherever they do business. They must know their business.

The Latah county jail, during the winter months, is a popular place with a number of individuals who are minus a meal ticket and also lack the inclination to work. They apparently welcome an opportunity to get a comfortable berth in jail for the winter. If these folks had six days a week at hard labor staring them in the face they would go to most any extremes to keep out of jail. "Laying it out in jail" has no terrors for a certain class, but this class does certainly hate to work.

According to a report from Boise the act of the present legislature in doing away with the bounty on predatory animals saves the state \$300 a day. It didn't go into detail concerning the nature of this so-called saving, but it is presumed that the repeal of the law means there will be \$300 a day less bounty money paid out. If predatory animals in the state have been killed to the extent of requiring that amount of bounty money, it is reasonable to suppose there has been a tremendous number of predatory animals killed for the bounty. According to figures prepared by the federal government a predatory animal will destroy many times more in the course of a year than the price paid by the state for bounty.

The bounty on cougars has been \$50 and there is no question but that this bounty has been the incentive for hunters to go out after these game-destroying animals. One cougar will kill more deer in a year's time than the futile efforts of several deputy game wardens will save from poaching hunters. Yet the state seems perfectly willing to pay these deputies generous salaries for their inactivity. We believe most of the sportsmen of the state would endorse a movement to cut deputy game wardens salaries in half and double the bounty on cougars.

Charlie Summerfield was elected last fall by the dry votes in Latah county on the understanding that he would enforce the prohibition laws to the limit. He has a big job ahead of him. In fact, it is too big for one man to handle alone. He will need the support of all of those who are in favor of law enforcement. Those who refuse him assistance should have no complaint if the laws are not rigidly enforced.

CAMERON NEWS

Rev. Rein and Herman Silflow made a business trip to Juliaetta last Wednesday.

Mr. and Mrs. Blum were dinner guests at the parsonage Wednesday evening.

Those enjoying a splendid dinner at the A. O. Wegner home Thursday evening were: Rev. and Mrs. Rein and sons, Mr. and Mrs. Wendt, Mr. and Mrs. Gus Kruger and daughter, Mr. and Mrs. F. W. Silflow and sons, Mr. and Mrs. A. H. Blum, Gus and Laura Blum, Mr. Fred Silflow, Sr., Mr. and Mrs. Otto Silflow, Herman and Paul Silflow and Bill Brammer.

The Luther League held its annual meeting at the Carl Hartung home Friday evening. Most of the members were present and a good time reported by all. The officers for the coming year are: Gus, Blum, president; Henrietta Blum, vice-president; Otto Silflow, treasurer; August Hartung, secretary. Five new members were taken in. After the business meeting the evening was spent in playing games. At 11:30 a delicious lunch was served by August, Bertha and Walter Hartung.

Walter Silflow returned from Sharon, Wash., Saturday, after spending several weeks there with friends.

Edward and Bobbie Rein spent Friday evening at the Blum home.

Mr. and Mrs. Otto Silflow, Herman Silflow and Mr. and Mrs. Gus Kruger were dinner guests at the Fred Silflow, Sr. home Sunday.

Mrs. Brammer, Sr., had as dinner guests Sunday, Mr. and Mrs. August Brammer, Mr. and Mrs. Henry Wendt, Mr. and Mrs. Reitz and son, Mr. and Mrs. Henry Brammer and family.

Mr. and Mrs. Herman Meyer were dinner guests at the parsonage Sunday.

Mr. and Mrs. Albert Schultz, Sr., entertained at dinner Sunday evening in honor of the baptism of their infant grand-daughter, Lois Lorraine Hodge. Those present were: Mr. and Mrs. Blum, Rev. and Mrs. Rein, Mr. and Mrs. Charley Schultz and family, Mr. and Mrs. Carl Hartung and daughter, Selma.

Mr. and Mrs. A. O. Wegner and family were dinner guests at the C. L. Wegner home Sunday.

Miss Ruth Boemeke was a dinner guest of the Blum girls Sunday evening.

A number of the young folk from Cameron attended the revival service at the U. B. church at Southwick, Sunday evening.

Miss Minnie Blum returned to school at Kendrick, Monday, after spending the week end with home folks.

Mrs. Rein gave a tea Tuesday afternoon for Mrs. Hodge. Those present were: Mrs. A. Spekker, Mrs. Albert Schultz, Sr., Mrs. C. Hartung, Mrs. Herman Blum and Mrs. Hodge.

Agatha News

Mrs. Lambert came to the river Sunday to visit relatives and friends.

Mrs. Dean Wright returned home Friday, after spending a week in

Fall Freshening Is Meeting With Favor
Many Excellent Reasons Are Given for Practice.

Fall freshening is one of the methods that many scientific men and others have been for years endeavoring to persuade dairymen to practice. There are so many excellent reasons for such advice.

Cows that freshen in early autumn produce more for the year and considerably more in the winter, than cows freshening in the spring. The winter is the time of year when most cows should be in milk and heavily in milk because, as a rule, the price is consistently higher during the winter and early spring months and also the farmer who practices diversified farming has more leisure time away from his general farming operations at that season of the year.

Professor Misner of Cornell, in writing on this problem, compiled some valuable information on over 2,000 cows, from which he found that in herds that had less than 25 per cent of the cows freshen in the fall, the average yield per cow per year was 4,930 pounds and the cost of producing 100 pounds of milk was \$2.80. In herds where over 50 per cent of the cows freshen in the fall the yield was 6,025 pounds and the cost \$2.35 per hundred (1921 figures for New York state). While the difference cannot all be accredited to fall freshening yet it undoubtedly was an important factor, and hence has a very definite bearing on the cost of producing milk.

Between December 1, and March 1, is the ideal time to get the cows with calf, thus insuring fall freshening with consequent greater profits.—H. R. Lascelles, Fieldman, Colorado State Dairy Commissioner.

Late Winter and Early Spring to Prune Trees
 It is usually considered preferable to prune all fruit trees in the late winter or early spring, but this point has probably been over-emphasized. In sections where there are mild winters, winter-killing should not result and fall pruning should therefore not be harmful.

Provided pruning has been carefully done during the first years of a tree's life, there would not be much heavy cutting necessary after this time. Furthermore, what there is will be largely cutting out of interfering branches with the purpose of thinning out the growth and letting in light to the remaining wood. Cutting of this kind can usually be done in the fall without fear of injury.

One thing may actually be in favor of fall pruning, provided it is done before the leaves fall. This point is that it enables the pruner to see more vividly the results he is obtaining, particularly in regard to thinning out the branches where the growth is too thick and is producing too much shade. On the other hand, it is always a good plan, even with spring pruning, to prune a few sample trees while the leaves are yet on, to serve as a pattern in the dormant season (spring).

In general, however, it is safer to do most of the pruning in the spring or any time during late winter, after the coldest weather is past. This applies to heavy cutting particularly and to the pruning of old bearing trees. A small amount of cutting, thinning out growth, removal of suckers, etc., may be done any time during the year with almost equal success.

Value of Pumpkins in the Fattening of Pigs
 Results from three experiment stations show that 376 pounds of pumpkins fed with 273 pounds of grain, gave 100 pounds of gain with fattening pigs. Authorities state that 2½ tons of pumpkins are equal to one ton of corn silage. About the only way of getting at the value of corn silage is by figuring its actual cost and this varies a great deal. Data kept in Illinois indicated that a ton of silage costs about \$3.30. With concentrates at \$20 per ton and legume hay at \$14 per ton, good silage is worth about \$6.50 per ton. Therefore, if it takes 2½ tons of pumpkins to equal one ton of corn silage and it is worth \$6.50, pumpkins would be worth less than half that amount. However, we believe they would be worth more than that for feeding hogs but we doubt if they are worth \$6 per ton. The seeds of pumpkins contain much nutrient and they should not be removed when feeding.

POULTRY
FIRST REQUIREMENT FOR SANITARY COOP

The first requirement for a sanitary hen house is a roomy, dry building with plenty of window space and easy means of ventilation.

Dropping boards under the roosts are quite essential for the proper maintenance of cleanliness. They should be made of tongued and grooved flooring well laid, and should be at least three feet above the floor of the house. If nests are under the dropping boards, three feet six inches would be better height. In the case of heavy breeds runways up to the roosting perches should be used, but with leghorns and other light breeds they are not necessary.

Dropping boards should be level, and the perches arranged about six inches above them. The perches should be on a level, also, and of 2 by 2 material. They should be fastened to 2 by 4 supports that are linged at the back end of the house so that the roosts can be raised out of the way while scraping the dropping boards.

A hoe with 15 or 18-inch blade is very satisfactory for scraping the dropping boards, and if used regularly once or twice a week will assist materially in maintaining the health of the flock. A small box arranged to hang from and slide along the front edge of the dropping board platform, to receive the droppings as they are scraped from the board, will help to preserve the fertilizer for the garden.

One nest should be provided for each five or six birds, and even more if trap nests are used. Twelve by twelve inches is large enough and one-fourth inch mesh hardware cloth is excellent for the bottom. Wall nests are to be preferred to those located under the dropping platform, but the wall nests require a top placed at an angle of at least 45 degrees, to prevent the chickens roosting on them. The runways along the front of the nests can also be made to fold up in front of the nest openings, which will keep the young birds from roosting in the nests at night and fouling them.

Dry mash hoppers are essential to the economical feeding of the flock; they should be raised on legs 18 inches to 2 feet from the floor.

Water stands should be raised the same as the mash hoppers, and are best made with a slatted top in the middle of which an opening is left to receive a 12-quart pail. The support for the bucket should be about six inches lower than the top of the platform.

A broody coop where feverish hens can be confined and fed is much to be preferred to ducking them or to starvation.

A catching coop is very desirable and almost necessary where any regular and consistent effort at culling is attempted. A heavy wire with one end bent to form a hook and the other end tied to an old broom handle is useful in catching a bird or two, as occasion may demand.

A bin where two or three hundred pounds of scratch grain may be stored in the chicken house is also a labor saver.

Details as to the construction of different items mentioned above must of course vary with the size of the flock and local conditions.

Difficult to Determine Sex of Goose or Gander
 Ganders are usually a little larger and coarser than geese. The head of the gander is apt to be larger and the neck thicker. The cry of the goose is rather harsh, while the gander makes a shrill cry. The only accurate way is examination of the organs, or observation of the flock at mating time.

Laying ability of geese depends on the breed and the individuals. Toulouse geese will usually average about twenty eggs, and some produce thirty to thirty-five. White Chinese geese will lay from fifty to one hundred eggs. The Emdens are not generally quite as good layers as Toulouse, although very similar.

The lameness may be due to rheumatism caused by spending the night in a damp roosting place. Goslings sometimes become lame, due to faulty feeding methods caused by lack of mineral matter or animal feed in the ration.

Early Hatching Favored
 Hatching in March and April instead of May and June has several advantages. In the first place, the early hatches do not meet the strenuous competition of chicks that are incubated by hens later in the season. The incubator can be made to yield more profitable returns by running it during the early months when farm work has not become heavy.

Winter Egg Production
 Winter egg production does not depend entirely on the number of hens you keep. Regardless of the size of the flock they will all do the same thing without a balanced ration. Nearly everyone knows what is needed to feed hens a balanced ration. The problem is to keep all the different items on hand all the time. It really takes skillful management to do it, as many poultrymen work on limited capital and something is always running short.

Pure Bred Sire Is Best for Breeding
Female Ancestry Should Show High Records.

"Future development of the herd," says O. E. Reed, formerly of Kansas, now with Michigan College of Agriculture, "depends to a great extent upon the kind of sire used with the herd." It has been said that the sire is half the herd and it is a fact that all future cows in the herd carry 50 per cent of his breeding.

The herd sire should be pure bred of the breed he represents and be backed by good ancestry. If possible he should be a sire whose mother and other close female ancestry have shown high records of production. A yearly record is to be preferred to one of shorter duration.

If it is not possible to know the record of production one should by all means see the mother of the animal in question and note how closely she conforms to good dairy type. If the sire's father has daughters that have proved to be good producers he is more certain to transmit the dairy qualities desired. Very often it is possible to buy an old sire that has proved to be a good breeder. Good results from the use of such an animal are almost certain. The objection to buying an old bull is that he is high priced if his value is known and one runs the chance of getting an unruly animal. A bull calf is usually selected. A calf can be purchased for less money and the owner can train him as he chooses. Too much attention cannot be given to the selection of a sire, for future success depends largely upon the head of the herd.—Kansas Bulletin No. 167.

LINDEN LOCALS
 Mr. and Mrs. C. H. Fry spent Saturday evening and Sunday with Mr. and Mrs. Lester Hill, returning home, Monday.
 Mrs. Fred Ashlin of Spokane is visiting her father, and sister, Mrs. Millie Abrams.
 Mr. Sadler was laid off from work several days last week on account of a sprained knee.
 Mrs. Clem Israel visited Mrs. Granville Wall, last Tuesday.
 Addie Alexander had the misfortune of losing a valuable work horse one day last week. The horse was seemingly as well as usual, but dropped dead in the harness. Mr. Alexander thinks he must have had heart disease.
 Mrs. Winegardner is enjoying a visit with her brother, Walter Hoffman and family and her sister, Mrs. Johnson of Leland.
 Mrs. Plock from Montana and Mr. Weyen of Leland have been visiting their brother, W. Weyen.
 E. L. Whisler has been quite ill the past week.
 The Misses Ella and Hazel Butler, J. D. Perry and Herman Travis spent Sunday on Bear ridge visiting Raymond Butler.
 Miss Ethel Abrams spent Saturday night and Sunday with the Dahl family at Park.

FARM NOTES
 Moldy corn is always dangerous feed and the flock should not have access to it.
 The droppings boards, perches and nests should be treated for mites. The pullets also should be examined for lice.
 The Purdue laying ration with cornmeal has given excellent general satisfaction. A good grade of flour middlings will give much better results than standard middlings.
 The white of eggs is chiefly water combined with protein. The yolk has some protein and much fat. To supply the protein in egg production it is necessary to feed liberal rations of protein the same as is needed in feeding cows for milk.
