THE OFFICIAL PAPER OF LATAH COUNTY

VOLUME 35

KENDRICK, LATAH COUNTY, IDAHO, FRIDAY, JULY 24, 1925

NUMBER 30

## Latah County News Paragraphs

### Items of Interest Taken From Neighboring Papers

The water committee of the city council has signed a contract for the purchase of a large deep water pump and equipment for the new city well, which has just been completed. The pump was purchased from the Byron Jackson Pump Manufacturing company of Berkeley, California. The consideration, which includes some extras in addition to the specifications in the bid, is \$4,410, installed.

The pump will be operated by a 100 horse power electric motor and will have an automatic control, the power going on or off, as needed.

The pump will be shipped within three weeks and it is expected, according to Mayor H. Melgard that it will be installed and the city will be using water from the new well, by the first or middle of September. The well was drilled to bedrock the drill stopping at 565 feet. The water will be pumped from a lower strata than the present city water supply, and every indication points to an undiminishable supply.

The water committee of the city council consists of Mayor Melgard and Councilmen J. R. Collins and Jos Kimberling.—Star-Mirror.

For the benefit of those who do not live in this, the greatest part of the United States, we might state that if the weather was any finer something would have to be done.

Haying is well along and the harvesting of barley and wheat is now in full swing on the rim, and will gradually spread upland. If the weather continues favorable there will be one of the finest crops known in this section.—Genessee News.

H. Melgard, President of the First Trust and Saving Bank of Moscow and also president of the Bank of Juliaetta, and Attorney A. H. OverSmith attended the regular meeting of the board of directors of the Bank of Juliaetta last Tuesday.

Mary G. Behrens was elected assistant cashier and A. W. Behrens was elected director to fill the vacancy caused by the resignation of Carl Porter.—Juliaetta Record.

### FILES SUIT FOR DIVORCE

Hildur M. Cox has filed a suit for divorce in the district court against her husband, John Cox. The complaint charges habitual intemperance, failure to provide the necessities of life and cruel and inhuman treatment. Mrs. Cox asks for the care and custody of two minor children and that certain community property be set aside as her separate property. The couple were married at Moscow and have resided in Troy.—Troy News.

### PARADISE FOR HUNTERS

When Jack Hendley came down from the Clarks Fork district, where he is logging, to spend the Fourth at home, he told friends that that country is a veritable hunters' Paradise—or would be if hunters were encouraged to go there. Deer roam the forest in large bands and are quite tame, feeding around the logging camps without fear. Bears—two or three kinds—stick around the camps in packs and pilfer any and everything that is not staked down or under cover. As for fish, Mr. Hendley says the streams are alive with them. A couple of men can catch enough in a couple hours to make an abundant feed for the ninety loggers working in his camp. Forest reserve up there and neither the government nor the lumber companies operating there encourage the presence of hunters.

To reach his camp Mr. Hend-

## Build Railroad Into Timber Belt

### N. P. Engineers Arrived at Orofino Recently

The advices from Orofino that Northern Pacific engineers had appeared there to take the field into the Clearwater timber belt is accepted as meaning that that company and the Union Pacific will soon call for bids for construction of the railroad. This is to be provided, under an agreement with the Clearwater Timber company, which will install a big mill here and will guarantee a tonnage of 150,000,000 feet of logs a year to the railroad.

Survey for the road was made about two years ago. It extends out of Orofino 55 miles, along Ford's creek passing within a mile of Weippe and with a terminus near a point known as Headquarters. The present work of the engineers, it is understood, involves placing the engineering work in shape for the calling of bids. Estimate has been made that rush operations would be necessary to complete the road by the summer of 1927, when plans provide for completion of the mill and dam here. The estimated cost of the road is about \$3,000,000.

Appearance of the surveyors has confirmed the statement of President Donnelly of the Northern Pacific, at Lewiston recently, that his road and the Union Pacific had reached an agreement for construction and that starting work awaited simply word from the Clearwater Timber company interests.

Mr. Donnelly said that the agreement between the roads provided for placing the entire branch line of the Northern Pacific between Arrow and Stittles under jurisdiction of the Camas Prairie Railway company, the latter to operate the branch into the timber. The plans involve extensive reconstruction of the Clearwater line between Arrow and Orofino.

### Open Furniture Store Here

James Pettet, who for the past 5 years has operated the Moscow Trading Co. store, signed a 5 year lease with the Fraternal Temple company, for the store building now occupied by the Halseth Confectionery, and will put in a complete line of furniture and household furnishings. He expects to exchange new furniture for used and will maintain an exchange department.

Mr. Pettet stated this week that he has been in the furniture business for the past 30 years and just recently disposed of his business at Moscow. Since that time he has been looking for a new location and decided that Kendrick looked as good to him as any place he had seen. He expects to have his stock arranged and ready for business about August 10.

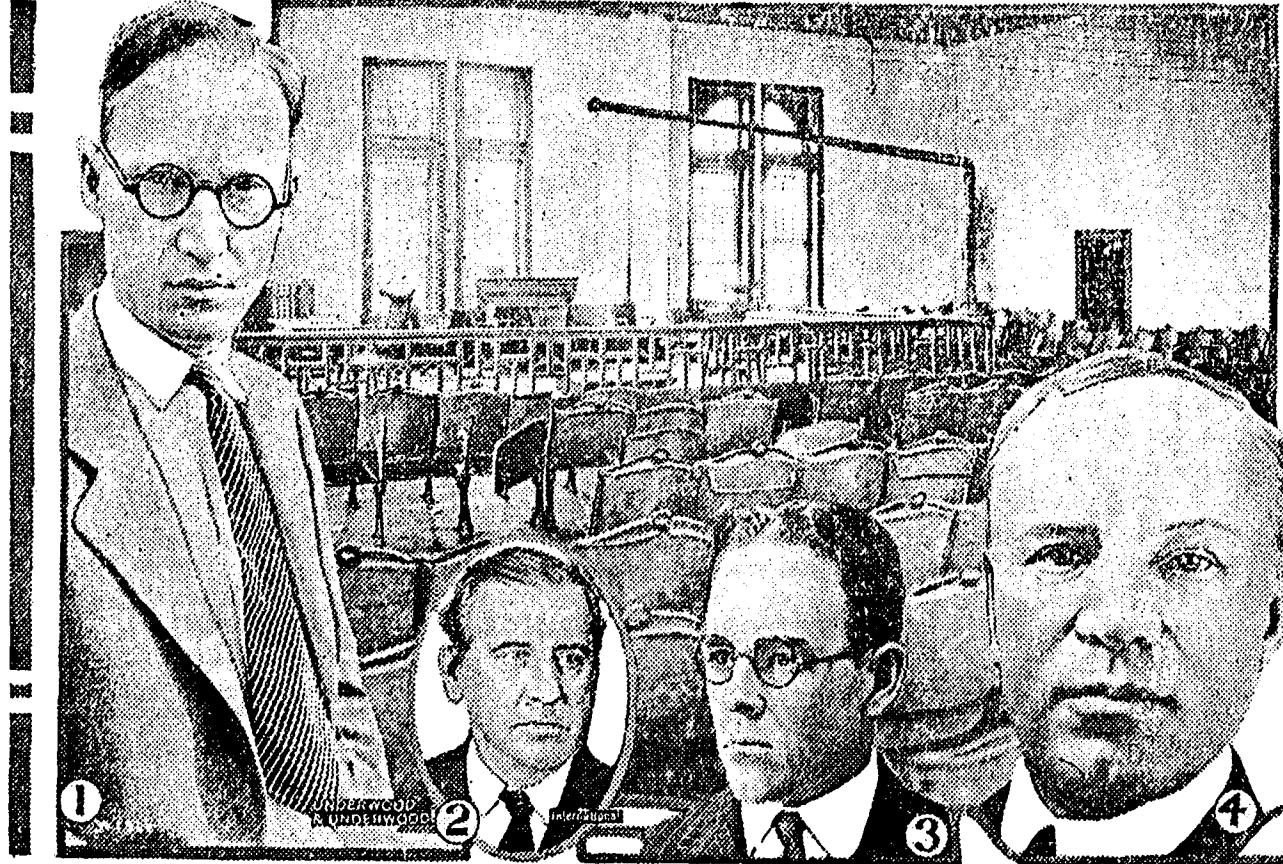

Mr. Halseth, who at the present time occupies the building will move his confectionery into the Kendrick Hotel building, formerly occupied by the bakery.

"Please, my mother sent me back to let you see what a big bone there was in the pound of beef she bought last night, and she wants another pound without bones," said a small boy.

"Well," replied the grocer, "tell your mother the next time I get a cow without bones I'll send her a leg for nothing."

ley packs from Clarks Fork a distance of 14 miles over mountain trails. There are no wagon roads. The logs are driven down the river to Lake Coeur d'Alene and floated to the mill.—Deary Press.

## Scopes Case Trial Room and Chief Figures

Next month attention will be centered on the little town of Dayton, Tenn., where John T. Scopes will be tried for violating the state law against the teaching of the theory of evolution. Above is the Rhea county courtroom where the trial will be held, and 1, John T. Scopes; 2, John K. Godsey, attorney for the defense; 3, S. K. Hicks, senior prosecuting attorney; 4, Judge J. T. Raulston, who will preside over the trial.

## 1924 Bean Prices Considered Good

### Figures Show Largest Returns in Four Years

TWIN FALLS—Bean growers of the Twin Falls region who are members of the Southern Idaho Bean Growers' association received \$5.41 a hundred pounds for beans raised last year, it is announced by officials who made out and sent checks for the final payment to the various bean growers. The last total payment made today totals \$5038.41, making a total received by bean growers of \$730,887.96.

Another year of prosperity for bean growers is ahead, according to the letter of T. M. Baird, secretary of the association, sent out with each of the checks. Recapitulation shows: Pounds of clean beans sold, 1921, 1,252,644; 1922, 3,459,560; 1923, 7,111,781; 1924, 12,480,300.

Gross proceeds: 1921, \$54,000.49; 1922, \$179,871.07; 1923, \$398,744.48; 1924, \$730,887.96.

Cost of marketing (percentage of gross sales): 1921, 7.8 per cent; 1922, 6.6 per cent; 1923, 6.4 per cent; 1924, 7.7 per cent.

Overhead expense (percentage of gross sales): 1921, 2.5 per cent; 1922, .7 per cent; 1923, .76 per cent; 1924, .71 per cent.

Returns to growers per cwt. (marketing charges deducted): 1921, \$3.94; 1922, \$4.80; 1923, \$5.21; 1924, \$5.41.

### Harvesting on Potlatch Ridge

Harvesting got under way on the Potlatch ridge this week, when two machines started. The Wagner stationary outfit started at Cameron Monday. The Parks rig went out Tuesday near Leland. Others will start before the end of the week. Three loads of new wheat were received at the Vollmer-Clearwater company tramway and several at the Kendrick Rochdale warehouse this being the first wheat of the year to be delivered.

Farmers are complaining that the recent hot wave damaged the spring crop to the extent of several bushels to the acre, and the early sown beans have lost their blooms and will probably be short. Rain is needed badly for the late sown beans, and good showers anytime in the next two weeks will assure a good crop. The vines are big and healthy, but moisture is needed for the blooms to set on.

### Doctor Smith Locate Here

Dr. L. F. Smith, who was located at Troy, Idaho, last year, has located at Kendrick, with office rooms in the Drug Store building, and is now ready for business.

Dr. Smith graduated from the Medical College of the University of Oregon in 1908, and also spent three years in College of Physicians and Surgeons at Chicago, Illinois.

Dr. and Mrs. Smith have their temporary residence in the McDowell house across from the hotel until such time as suitable residence can be secured. Dr. Smith is also a cornet player and will be a valuable addition to the local band.

### Southwick Church Dedicated

A large crowd assembled at Southwick last Sunday to witness the impressive ceremony of the dedication of the Catholic Church of The Scared Heart. The dedication services were performed by Rt. Rev. D. M. Gorman, D. D., L.L.D., Bishop of Boise, who afterwards celebrated mass and preached an appropriate sermon. The music was furnished by the Thorn creek choir and was a rare treat.

The church of The Scared Heart is the first Catholic church ever erected in this neighborhood, and its erection is due mostly to the untiring zeal and enthusiastic leadership of Father B. I. Carey, pastor of Thorn creek, Idaho.

There were people present from Colton, Thorn Creek, Cameron, Southwick, Cavendish and Slickpoot. After mass was over the crowd went to the Charlie Kazda place where a picnic dinner was enjoyed. A quantity of ice cream were consumed and after impromptu talks by Bishop Gorman and Mr. Marion Wright of Southwick and several cornet solos by Father Carey, the crowd went home happy.—Handed in.

### Bank Seeks \$4589.27

Judgment for \$4589.27 is sought in a suit filed in the district court, Wednesday of this week, by the Kendrick State bank against Earl A. Langdon. The suit involves the alleged non-payment of two promissory notes. A former action was brought by the same party to collect the same debt and this suit is to collect the balance of the debt.

### Cannery Opens

The Juliaetta cannery opened the season's run at Juliaetta last week, canning beans. Tomatoes are now ripening here, and the cannery will soon be putting that popular vegetable into tin containers.

## Heavy Year in Federal Courts

### Criminal Division Extracts a \$100,000 in Fines

Boise—Amount of fines, forfeits and penalties in United States district court in criminal cases for the year ending June 30 totalled \$106,085 according to the annual report of the district attorney's office. This report finished yesterday by Miss Emma Wilkinson, will be forwarded to the attorney general's office at Washington, D. C.

Number of convictions was greater than a year ago the report shows and the number of acquittals was less. The government commenced 456 criminal prosecutions in the year and terminated 434. Of these 376 were convictions and fourteen acquittals. For the preceding year the acquittals totalled 20.

There were 310 pleas of guilty and 82 trials by jury. The number of criminal cases pending at the close of June 30 last was 178 the report shows.

Violations of the prohibition law lead the list in the criminal division. There were 315 of these cases started, 337 terminated. The government obtained 304 convictions and lost nine cases through acquittal. There were 58 trials by jury and 255 alleged violators of the liquor law entered pleas of guilty. In the prohibition prosecutions alone fines totalled \$85,025.

Violations of the Mann act were second in the list, with 25 cases started, 26 terminated, 19 convictions and none acquitted. Fines totalled \$1350.

The anti-narcotic law violators were in third place, fines totaling \$400. There were seven convictions, two trials by jury and five pleading guilty. Five cases were pending at the close of the fiscal year.

### Myrtle Farmers Want Spur

Farmers of the Myrtle section recently applied to the state utilities commission to have the Northern Pacific put in a spur at the new Myrtle bridge. At a hearing held at Myrtle recently, before F. E. Smith of the Utilities commission, the railway company maintained that a station at Cheerylanes will serve the farmers quite as well, as it is but two and a half miles further up the river and has large orchards that will provide heavy tonnage of fruit shipments in the near future, and has excellent facilities for a townsite. The company will have to erect a depot and install an agent at Cheerylanes, and contends that Cheerylanes is the logical place for the station to serve both Myrtle and Cheerylanes.

## File Big Claim For Indians

### Nezperce Tribe Demands Nineteen Millions

Superintendent O. H. Lipps of the Fort Lapwai Indian agency has been advised by Serven Joyce & Barlow, Washington attorneys, that on July 10, they filed with the United States court of claims, Washington, D. C., a claim on behalf of the Nez Perce tribe in the sum of \$18,626,999.09 growing out of their treaty with the government of October 17, 1855, says the Lewiston Tribune. Article 3 of the treaty provides:

"That all portion of the country recognized and defined by the treaty of Laramie as Blackfoot territory, lying within the lines drawn from Hell Gate or Medicine Rock passes (near present city of Missoula, Mont.) in the main range of the Rocky Mountains, nearest source of the Muscle in an easterly direction to the Shell river, (near present town of Livingston, Mont.) thence to the mouth of Twenty-five Yard creek, thence up the Yellowstone river to its northern source (in Yellowstone park), and thence along the main range of the Rocky Mountains in a northerly direction, to the point of beginning shall be a common hunting ground for ninety-nine years, where all the nations, tribes and bands of Indian parties to this treaty may enjoy equal and uninterrupted privileges of hunting, fishing and gathering fruit, grazing animals, curing meat and dressing robes."

About two years ago the secretary of the interior approved a contract with this firm of attorneys and the Nez Perce Indians, the terms of the contract providing that the attorneys were to bear all the expenses of prosecuting the claim and if successful their fees would be fixed by the court of claims, and in no event could they exceed the sum of \$25,000 and actual expenses. If they lose the case the Indians are out nothing. It was first necessary for the attorneys to secure the passage by congress of a jurisdictional act to permit them to file the suit in the court of claims. The act was approved March 13, 1924.

The attorneys have advised the Indians through Supt. Lipps, that they shall endeavor to collect and present the evidence regarding the value of these hunting grounds without delay and will do all they can to expedite the case to final disposition, but that undoubtedly an elaborate report will be required from the interior department and it may be a year or more before the case is finally heard by the court of claims.

Should the Nez Perces win their suit and secure the full amount of their claim, it will amount to \$13,000 for each of the enrolled members of the tribe, or \$65,000 for each family of five persons.—Star-Mirror.

### Radio Set For His Coffin

Los Angeles—Sam R. Kimball, aged San Fernando valley rancher, has placed an order with a Los Angeles undertaker for a \$1,200 steel coffin equipped with an up-to-date radio receiving set—it was revealed Monday.

In directing that the radio equipped coffin be prepared to receive his body, Kimball explained that he is convinced that the soul lingers near the body until the day of judgment and that he will be able to "hear what is going on in the world" after he dies, if properly laid away in the super-heterodyne casket.

**French Sends Check Back**

The Fourth of July Committee sent a check for \$25.00 to Burton L. French as an appreciation of his assistance in the program here July Fourth. Wm. Watts was one of those in charge of this part of the celebration and the following letter with the check was returned to him.

Moscow, Idaho  
July 15, 1925.

Mr. Wm. A. Watts,  
Kendrick, Idaho.  
My dear Mr. Watts:  
I am in receipt of your letter of the 13th and the check in the amount of \$25.00, signed by Dr. Geo. W. McKeever, Treasurer, Fourth of July Committee of Kendrick. You send the check in compliment of my part in your celebration.

I appreciate sincerely the graciousness of your committee in desiring to have me receive twenty-five dollars as a compliment to me because of my Fourth of July address and yet I must ask you to let me return the check to your committee.

Your people did a great deal to make possible the beautiful celebration that you gave. I want to have a part in it, and I want you to let me have the privilege of having just the part that I did without any compensation.

It was fine of you to arrange to send for me the morning of the Fourth and also I was able to spend the entire day in Kendrick and return in the evening with one of your former townsmen, Mr. Bechtol. Beyond this I would not want you to do one thing and I am abundantly repaid through the opportunity that I had of being with you, sharing in your celebration and meeting the many splendid, earnest, old friends whom I have known for so many years.

I am sure that Kendrick from time to time has occasion for public subscriptions, and I would like to have you turn the amount of the check to some cause that your committee will desire to sponsor.

With kindest wishes to you and your Committee, I am  
Yours very truly,  
BURTON L. FRENCH

**Death of John Kennedy**

Word was received here Tuesday morning, announcing the death of John Kennedy, who passed away at the home of Wm. Pemberton of Clarkston, at 7:30 Monday evening. Funeral services were held at Clarkston yesterday. The cause of his death was not learned.

Mr. Kennedy will be remembered here by many of the older residents, as he lived in Kendrick for many years. He was a man of splendid character and was well thought of by all who knew him.

**Submerged Village Appears**

Switzerland—Reappearance of a village inundated more than 300 years ago was noticed recently at Lake Antrona. A landslide caused the water level to recede and gradually the ruins of the old village comprising 42 buildings, were disclosed. The village of Antrona Piana was flooded by a monster spring freshet and has lain submerged for three centuries.

**\$256,000 For Kindness**

New York.—A girl with a golden voice who gave up an opera career to care for a sick old man has been rewarded with \$256,233 for her ministrations to Park Benjamin, attorney and father-in-law of Enrico Caruso.

Miss Ana Bolchi Fuller received this amount under Benjamin's will. It is shown by an accounting filed in court. Benjamin cut off his natural five children, including Dorothy Caruso Ingram, the tenor's widow with \$1 each. The sum of \$60,000 plus the residue of the estate was bequeathed to Miss Bolchi. The estate was appraised at \$367,161.

Benjamin adopted Anna Bolchi

in the Pennsylvania courts. She gave up her dreams of a career and postponed her marriage to Benjamin Fuller to be a companion to Dorothy Benjamin and to care for Mr. Benjamin.

**Will Present "Wayfarer"**

"All the world's a stage," but the world's largest stage is now nearing completion right here in the great state of Washington for presentation of "The Wayfarer," the immense civic and religious pageant that will be produced in the University of Washington Stadium, Seattle, each evening, July 27 to August 1.

This enormous structure measures 220 feet across the front including the entrance gates on either side. The stage proper covers an area 164 by 108 feet. From the ground to the highest point it is 75 feet and the great proscenium arch is 92 feet wide and 42 feet high. The trusses that also carry the gallery for the battery of spotlights have a span of 100 feet.

**Tierney Freed on Bond**

James Tierney, charged with maintaining a liquor nuisance in connection with a Kendrick garage, has furnished \$750 bond fixed at his arraignment and has been released from the Latah county jail. Jack Martz and Dick Halliday, co-charged with Tierney, have been unable to raise the amount required for release and still are held waiting trial in the district court, the date for which has not been set. Abatement proceedings to close the garage have been instituted by the county. It was charged that these three men used the garage as a means to distribute moonshine liquor.—Star-Mirror.

**Operation With Jack Knife**

Cordova, Alaska, July 20.—A tonsil operation was performed recently at Bering river on Controller bay, 60 miles east of here, by Dr. W. W. Council of Cordova, with a jack-knife and denatured alcohol. When Dr. Council arrived at Bering river from a hunting trip he was called on to handle the case. He had no implements. With the crude outfit he performed the operation with success. No anesthetic was administered. The alcohol was used to sterilize the knife.

**Band Concert Pleases**

The band concert given by the Kendrick Band Saturday evening, was well attended and greatly enjoyed by everyone. The boys showed marked improvement over the previous concerts rendered. Several selections were also rendered by the male quartet which indeed were very pleasing. It is expected that another open air concert will be given in the park about Saturday, August 1, at which time Bandmaster Thomas expects to have some instrumental solos besides the numbers by the band and the quartet. Announcements will be made in next weeks paper if arrangements are completed.

**Grasshoppers Destroy Crops**

Victoria B. C. July 21.—The British Columbia department of agriculture has been advised that vast armies of grasshoppers are devastating hundreds of square miles of land in the central part of the province leaving desolation of crops and foliage in their wake. The government has voted \$15,000 for poison which will be distributed to farmers for use in the affected areas. The insects were reported worst in Nicola and Okanagan valleys and on the Peace River farming district.

**Extract Radium From Sun**

Des Moines, Iowa.—Dr. L. Slomski, a Des Moines physician, announced recently he had patented a device which would extract radium from the sun's rays. The device, a glass tube eight inches long, containing certain minerals, after exposure to sunlight would give off a strong, cold glow in a dark room, Dr. Slomski told newspaper men.  
At a cost of \$1 stronger radium

rays could be obtained than from a grain of radium costing millions, Dr. Slomski said.

**CAMP LEWIS BARRACKS SOLD**

Approximately half of the dilapidated wooden barracks and other buildings went under the auctioneer's hammer recently to a Chicago salvage concern on the high bid of \$37,750. The buildings cost between \$3,000,000 and \$1,000,000 eight years ago at Camp Lewis.

**ILLINOIS HAS NEW FANGLED CHICKEN**

A new fangled chicken is being raised near Neoponset Ill., which is attracting a great deal of attention from poultry raisers and dealers in that part of the states. "This new breed is being called "Turken" and is claimed to be a cross between a turkey and a Rhode Island Red chicken. The little chicks recently hatched from the eggs have sarked necks like their parents. The rooster is of an average size with all the markings of a Rhode Island Red, but when it comes to his neck it is long and red as a turkey's. The pullets are in many respects, even more so than the males, the

reproduction of the turkey. The owner of this freak breed, Mrs. August Rosenthal, is being besieged with callers who desire to see this new kind of chickens.

The trains don't stop

The wood-peckers pecked  
The depot down!

**Advertiser Gets Trade**

One step won't take you very far,  
You've got to keep on walking;  
One word won't tell folks who you are,  
You've got to keep on talking.  
An inch won't make you very tall,  
You've got to keep on growing;  
One little ad won't do it all,  
You've got to keep them going.

A constant drop of water  
Wears away the hardest stone,  
By constant knocking, lower  
Masticates the toughest bone,  
The constant cooling lover  
Carries off the blushing maid;  
And the constant advertiser  
Is the one who gets the trade.

**Etiquette Note**

Don't bow to necessity, or let may think you desire to make its acquaintance.—Boston Transcript.

**Biennial Sweet Clover**

Biennial sweet clover grows only from the stem and not from a crown as is the case with alfalfa. Early in the fall the second-year buds have not yet formed. Plow the green growth under then and the buds do not develop. But examine a plant later in the fall and the second-year buds have developed remarkably and show green shoots. If these are turned under, they will surely come through and bother in the spring.

**Queer Bookmarks**

In the matter of odd bookmarks between the pages of a returned volume, one librarian claimed the blue ribbon by cutting a slice of raw bacon which one of his assistants had salvaged from a copy of Mr. Service's poems. But his claim was given second place when the chief of a famous library in a great manufacturing city countered with soft-shell crab which turned up between the leaves of a book on engineering.

### Destructive Gypsy Moth Being Checked

### Spread of Insects Occurs When They Are Young.

The gypsy moth has proved such a destructive insect in New England and New York that the New York State Conservation commission, in cooperation with the federal government, has established a barrier zone in an attempt to stop the westward spread of the pest. In spite of the fact that this moth is a winged insect, it does not occupy new territory through its power of flight. On account of the extreme weight of their bodies the females are unable to fly.

The spread of the moth occurs when the young caterpillars are first hatched from the eggs. The caterpillars have long hairs growing out of their bodies. These hairs, it is thought, together with the silk which the caterpillars spin, help to buoy them from a half mile to five miles from their starting place.

Last year, in order to learn about the winds which caused this gradual spread of the caterpillar aeronauts, 7,000 hydrogen-filled toy balloons were sent up by the commission. Each balloon bore a numbered tag requesting the finder to return it with a record of the time and place where it was found. Over 400 of these tags were thus recovered by the end of the season. They were found practically throughout southern New England, a number being picked up on both the eastern and southern coasts. One balloon was found off Yarmouth cape, Nova Scotia, proving a drift of about 400 miles in eighteen hours. Seven covered distances of 110 to 145 miles. One drifted 65 miles at the rate of 100 miles an hour. Another remained in the air six and a quarter hours and then dropped at the point of release, evidently carried back by a counter current.—Scientific American.

### Stable Manure Valuable Fertilizer for Rhubarb

Rhubarb is the strongest feeder of all vegetables. Stable manure, especially cow manure, is valuable because it supplies the humus, conserves moisture and furnishes plant food. Intensive and successful growers use from 25 to 40 tons or more per acre. Manure is probably most effective when applied in the early fall, although spring dressings are often made by successful growers. During the early spring this manure is supplemented at from two- to three-week intervals with heavy applications of nitrate of soda. This is to force the leaf-growth and to produce large stems.

Where the manure cannot be obtained in such large quantities, a commercial fertilizer containing 4 to 6 per cent of nitrogen, 8 per cent of phosphoric acid and from 6 to 8 per cent of potash, should be applied at the rate of 1,000 to 2,000 pounds per acre, depending on the character of the soil. This application of fertilizer is supplemented by applications of nitrate of soda at intervals of four to six weeks.

### Control Tomato Blight With Bordeaux Spraying

To control tomato blight, the bordeaux spray should be applied to plants three or four times during the season, beginning as soon as the spots appear in the hot beds. The 3-4-50 formula is recommended by the Kansas State Agricultural college.

The application of bordeaux mixture delays maturity of the fruit but the entire crop is frequently lost if the crop is not sprayed. Some growers practice spraying half their crop and leaving the other half unsprayed.

Wilt, another serious tomato disease, is quite different from blight, although the two are often confused. Wilt attacks the plants through the root and stem and causes the plant to collapse. A part or all of the plant may be affected. The leaves become limp, wither, and die almost as though the plant had been cut with a sickle. Splitting the stem open lengthwise shows a black streak on each side.

## PLACING INCUBATOR EGGS ON THE MARKET

(By T. E. QUISENBERRY)

Some farmers and poultry raisers make a practice of putting eggs on the market which they have had in an incubator for a few days and found the eggs to be infertile. This is a bad practice and should never be done by any honest farmer or poultry raiser. You may make good use of such eggs by consulting them at home. They will do to fry, for baking and for certain kinds of cooking, but they are absolutely unfit for the market. Such eggs, while good for home consumption are absolutely unfit for shipping. The yolks will break, the eggs will rot before they can reach the consumer, and it is a dishonest practice to offer such eggs for sale as fresh-laid eggs, and you lower the price on all eggs by so doing. Consume such eggs at home.

We have seen severe market losses due to a habit of sending infertile incubator eggs into commerce. This has been especially noticeable in the large houses making a specialty of breaking out eggs where they found it absolutely necessary to candle even in March and early April because farmers and poultry raisers were marketing infertile incubator eggs with their fresh eggs, and the incubator eggs came in in such bad condition and were so numerous that they had to be culled out before it was safe for the breakers to handle the eggs. At that time of the year there is no other reason for candling. You can see what a loss this means to any dealer, and instead of reducing the army of candlers which are now required this practice makes a demand for even a greater number.

Another very serious evil due to the marketing of infertile eggs from an incubator or from underneath a hen is their admixture with storage stock. These incubator eggs usually go on the market at the season when eggs are being stored without being candled. We know it to be a fact that infertile incubator eggs break down during transportation and handling and easily become "white rots."

Infertile incubator eggs can be used for bakers' purposes in the home, but under no circumstances should they ever be offered for sale or for shipment.

Another important reason why such eggs should not be marketed as fresh eggs is the fact that they are liable to be seized by food inspectors as being misbranded. Such eggs play havoc with the storage stock, and we are in hopes that no farmer or poultry raiser will be guilty of such a dishonest practice.

### Trap Nest Is Accurate

#### Test of Hen's Ability

The trap nest is the most accurate test of a hen's ability to lay eggs, but it is not practicable for those who live on farms, with all the other work they must do. Therefore, poultry specialists have been studying the general characteristics of laying hens, so that we might have a set of almost exact rules for telling the layers from the loafers. It has been proven over and over that these rules work correctly and no farm woman need longer feed hens that will not pay for their feed bill and give a profit. We must also remember that these lazy hens, which have been loafing all summer, fall and winter, will be laying their few eggs next spring at hatching time, and if their eggs are set, we will have another flock of loafers.

The hens that begin to molt in July should be sent to market. There is one exception to this, the hen that has hatched and brooded a flock of chicks, for she will usually go through a partial molt before she begins laying again. August 15 and September 15 is the best time to cull, but it will pay to go over your flock from time to time through the summer and cull out. Sell those that have stopped laying. There are usually a number of hens in every flock whose general appearance indicates they have low vitality. Little vigor and will never be profitable egg producers. A great percentage of these low vitality birds are late hatched pullets of the previous season.

### Poultry Hints

Carrots, cabbage and sprouted oats help make strong chicks.

Good hatches are obtained only when the laying stock has been selected for vigor and made to exercise.

Fresh eggs are the best for hatching purposes. If it is regarded necessary to keep hatching eggs they should be stored in a temperature of 60 degrees or lower.

Cull all undeveloped pullets and old hens from the flock.

Early hatched pullets will molt early in the fall and be ready for laying next winter at a season when egg production is low and prices high.

It has been shown that young chicks are most susceptible to infestation of roundworms until about 12 weeks of age. With severe infestation death may occur in two weeks. In mild infestations chicks live, but growth is slower and resistance to disease less.

# "RUGGLES OF RED GAP"

It's A Bear!

If ever a comedy could be called a scream from start to finish, this is it!

My word, here's Ruggles himself—that deucedly funny English chappie who lands out West where men are mean and that sort o' thing. You'll jolly well have the time of your life, don't y' know. Cawn't help it—it's simply rippin'!

Without doubt this is the best comedy dramas ever put on the screen.

Adds Luster to Eye

Considerable luster and sparkle can be added to the eyes, according to an expert, by the very simple process of bathing them three or four times during the day with a solution of boric acid. She found that by bathing her eyes regularly she not only made them look more brilliant, but rested them and thus gained decided freshness for the entire face.

Ancient Cavern Temples

Reminiscent of the days when caves were widely used as tombs and places of worship, cavern temples still exist in India, Palestine and Egypt. The construction of the catacombs of Rome is believed to have been inspired by the ancient practice of burial in the hollows of rocks.—Philadelphia Ledger

### Smut Diseases Cause Big Loss

Variety Known as Markton Discovered to Be Immune From Ailment.

(Prepared by the United States Department of Agriculture.)

An effort to supply farmers of the oat-producing areas with varieties of oats immune from or highly resistant to the smut diseases, which are very widespread and cause annual heavy losses to the crops, has been given encouraging impetus by the discovery recently of a variety immune from covered smut. The immune variety, known as Markton, is a selection from an unnamed variety of oats with yellowish kernels, obtained from Turkey about twenty years ago. It has been tested at the Oregon and Washington stations, where it has not only proved to be immune from covered smut, but has also shown the highest yielding ability of any variety tested at these stations. The discovery of immunity from covered smut in a variety with desirable kernel characteristic in combination with high yielding power is a decided step toward a solution of the smut problem in oats.

**Reduction of Crop.**  
In 1923 the smut diseases caused an annual reduction in the total oat crop of the United States estimated at 35,278,000 bushels, or 2.55 per cent. This percentage of reduction varies in different sections, amounting to as much as 10 per cent in Kentucky, 8 per cent in Massachusetts and Arkansas, between 5 and 6 per cent in Virginia, South Carolina, Georgia, Illinois and Minnesota. Iowa, the greatest oat-producing state in point of total bushels produced, suffered a loss of 1 per cent, which means a loss of more than 2,000,000 bushels. Oregon, where the

immune variety Markton has been grown commercially, showed no loss in 1923.

**Greatly Reduce Loss.**  
Hybrids of the Markton variety have been developed by the United States Department of Agriculture by crossing with it a number of the best standard varieties. These have been sent to four leading agricultural experiment stations in the oat-producing areas, where they will be tested for their resistance to the disease. Marked and satisfactory progress has been made by plant breeders in developing varieties of cereals which are resistant to various diseases, and it is hoped that the annual loss to the oat crop from smut diseases will be greatly reduced by subsequent development of resistant varieties.

### Practical Suggestions to Keep Calves Growing

The calf should be left with its dam two to four days and get the colostrum or "first milk." Then it can be fed two to five pounds of the dam's milk three times daily, which is preferable to feeding larger amounts twice a day. Grain and hay can be offered when the calf is ten days old. Keep the feeding utensils, manger and calf pen scrupulously clean and the calf comfortable and thrifty.

Substitute one pound of skim milk for one pound of whole milk daily until the calf gets all skim milk, and then feed six to ten pounds twice a day. Gradually increase the amount of hay and grain and add the finer parts of silage if available after the calf is six to eight weeks old. See that the calf has free access to fresh water and salt. Do everything that will encourage a most thrifty growth. Keep the calf free from lice and protected as much as possible from lice, flies, and other annoyances.

Continue feeding skim milk if available. Good roughage like clover and alfalfa hay and a good quality of sil-

lage tends to keep calves growing best during the first summer. Good pasture may be substituted for silage if calves can be turned into shaded paddocks or out only nights. Feed enough grain to keep the calves in nice condition of flesh, which insures a good rate of growth.

### Cucumber Beetles Most Destructive of Pests

Striped cucumber beetles, the most destructive pests of cucumbers, melons, squashes and other vine plants, are readily controlled by dusting the young plants with a mixture of one part of calcium arsenate and 20 parts of gypsum, according to Dr. Carl J. Drake, Iowa State college.

Dust the young plants when they first come up and follow with two or three applications per week and again after every rain. Ten to twelve applications during the season will usually hold the beetles in check.

The dust may be applied with a shaker made by punching holes in the bottom of a small can with an 8-penny nail, or may simply be scattered by hand. Circular No. 90, which describes in detail the common melon and cucumber insects and gives control measures for each, may be secured on request from the Bulletin Section, Iowa State College, Ames, Iowa.

### Feed for Dairy Cattle

Soy-bean meal proved to be fully as valuable as oilmeal as a feed for dairy cattle in an experiment conducted recently at South Dakota State college. Feeding soy-bean meal in moderate quantities did not have a damaging effect on the butter made from the milk, although if fed in excess it has a tendency to produce a soft, silty butter.

### Reduce Danger of Bloat by Careful Management

While there is always danger from bloat when cattle are on alfalfa or clover pasture, this danger can be very much reduced by careful management. The danger of alfalfa is perhaps no greater than that of clover.

When cows are turned on clover or alfalfa pasture the first time, they should not be turned on it until all the dew is dried off. The cattle should be well fed before they are put onto the clover or alfalfa. Leave them on the pasture for a short time the first day and then each day they can be left a little longer until they have become used to it after which they should be left on the pasture all the time, both day and night.

Until they have become used to the pasture they should be closely watched so that if any should bloat they can be treated before it is too late.

### Farm Hints

A good fanning mill is the farmer's best weed getter.

Even three-leaf clovers bring good luck if you have plenty of them.

Sweet clover should be cut for hay before it blossoms and should be cut high.

Weeds should be cut and pulled along fences and in odd spots on the farm so their seeds cannot be blown or washed onto the fields.

When corn and soy beans are to be planted together for ensilage, use from four to six quarts of soy beans and the usual amount of corn.

Good pasture and forage crops will help to reduce pork-producing costs. Pigs on green feed are more thrifty than those raised in dry lots.

Sweet clover seeded in the spring usually gives trouble if it is plowed under the first fall. The second-year buds force themselves through in the spring.

Whether or not tomatoes should be staked and pruned to a single stem or at least partly pruned is subject of argument yet among tomato growers. Probably it is a good idea to try them both ways and test it out.

## POULTRY FACTS

### CURE BROODINESS IN OPEN YARD IS BEST

As the hatching season is ended the problem of broody hens will be confronting most poultry raisers for the following months.

Numerous methods have been advocated from time to time for handling broody hens. Almost every one in any neighborhood has a pet plan for breaking the hens of this condition, which is guaranteed to work. Many of these are founded on sense and will give results, while a good many are founded on abuse of the hens, which should not be practiced.

One favorite method we used to have on the farm was to dip the hens in a tub filled with water, says a writer in the Michigan Farmer. We kept them under the water just as long as we dared without drowning them. This was supposed to scare the hen so badly that she forgot about wanting to set. Sometimes it worked and sometimes it didn't. When it didn't, something else had to be tried. The broody trait of hens is not a "notion" but a natural condition in response to natural laws. The longer the hens are tolerated in this condition, the longer it will be before they return to laying and the less the profit realized from the investment.

It is foolish to think that mistreatment and abuse which breaks up the tendency is a wise one. One idea sometimes used was to starve the hens when they became broody in order to break them up and get them back to laying. We now know that this was the exact opposite to what we should have done in order to encourage early laying. What is advisable is to feed the hens liberally on a good egg ration which would within a few days have induced the hens to lay. Once laying is resumed the broody trait will disappear.

The open-yard method of breaking up broody hens is one of the most humane treatments we can give the fowls and is also most productive of results. The method is simple. A small area is fenced off in a grassy and shady corner in which a box is placed for protection in bad weather. The hens are turned loose in this yard and plenty of fresh water and feed is given, and as a rule the broodiness ceases in a short time.

Slatted and wire mesh coops indoors or out work fairly well when the bird is caught in time, but in warm weather do not give satisfaction. According to my judgment, the best method for curing broodiness is the open yard. There is less expense, work and trouble involved in this plan than in any other tried. It breaks up the birds more quickly and thus gets them back into the laying class with a minimum loss of time.

### Prevent Limberneck by Removal of Carcasses

If poultrymen would spend a little time in looking over their range during the summer months to keep it free from dead carcasses they would undoubtedly prevent a great many outbreaks of so-called "limberneck," or botulism, in poultry.

This is the advice of Dr. F. R. Beaudette, poultry pathologist of the New Jersey agricultural experiment station, who says:

"At this time of the year decomposition takes place quite rapidly. Flies are attracted to carcasses and there lay the eggs which later hatch forth maggots. If these maggots are eaten by a fowl an outbreak of botulism is very apt to occur. The outstanding symptom is the limberneck, and generally the affected bird shows a bright red comb. The temperature of such a bird is usually always subnormal. This is of considerable importance in making a diagnosis. The disease is not spread from one fowl to another, and therefore can easily be controlled by eliminating the source of poisoning. It is still a question whether the maggots themselves are responsible or whether the poisoning is due to the botulinus toxin which the maggot mechanically carries.

"Ranges which are overrun with weeds or with anything that would obscure a dead carcass are more dangerous than a range relatively free from tall vegetation; hence, it is a good practice to keep weeds mowed during the summer months. Of course there is no danger of botulism in flocks that are confined to runs.

"The disease cannot be cured after marked symptoms have made their appearance, though mild cases will often make a spontaneous recovery. Epsom salts in the usual dose aids in early cases. Confinement in a cool dark place seems to give good results."

### Green Feed for Fowls

If possible, rest the poultry yards for a month and grow a green crop to purify the soil. A certain amount of green food is essential to the health of the poultry. When in addition to the food value, we can have the service of purifying the soil, it is thrifty to sow oats, or wheat, or rye in the poultry yard. Even when the yards cannot be spared, and the chickens must have their usual run, by heavy seeding there will be growth enough to benefit the soil.

## ORATORY PRIZE WINNER

Wight Baake, junior in the college of liberal arts of Northwestern university, Evanston, Ill., who won the national intercollegiate contest in Los Angeles, Cal., and a first prize of \$2,000 and international fame as the student in American universities who best presented the cause of the Federal Constitution. Baake hails from Onawa, Iowa, and is twenty-two years old.

### Prevention Best Remedy for Chicken Diseases

When one goes into a chicken house and hears the birds singing, it is a pleasant contrast to the appearance of a flock that is droopy, with pale combs and indicating a general unhealthy condition. The difference in the majority of cases is not due to one producer curing the disease and the other not curing it, but rather to the fact that one breeder prevents the trouble that is affecting the other person's flock.

Most cases of roup and similar contagious diseases are the result of the disease being brought to the farm with new fowls which were not isolated until they had been proved to be healthy. Sometimes the disease comes from an outbreak of a previous attack after which the premises were not properly cleaned up and disinfected.

Lice and mites can do a great amount of harm if they have their own way. The good poultryman does not wait until they get a strong foothold in the flock, but carries on a preventive war on such pests.

### Early Boston Burial

On February 18, 1630, Governor Winthrop recorded what was probably the first burial in Boston. The entry reads: "Captain Welder, a hopeful young gentleman and an experienced soldier, died in Charlestown of consumption and was buried at Boston with a military funeral."

### Ring Centuries Old

A massive neck ring of solid gold, believed by experts to date back to 1200 B. C., was found recently on a farm in Norway. The ring, of artistic though barbarian design, has been placed in the museum of Christiania university. It is believed to have been buried as an offering to the gods.

 sioners, Latah County, Idaho. 27-5t

#### SUMMONS

In the District Court, Second Judi-  
 cial District of the State of Idaho,  
 in and for the County of Latah.  
**MARY HUNTER OVERBY,**  
 Plaintiff,  
 vs  
**ASA OVERBY,** Defendant.  
 The state of Idaho sends greeting  
 to ASA OVERBY, the above named  
 defendant.

You are hereby notified that a  
 complaint has been filed against you  
 in the District Court of the Second  
 Judicial District of the state of Idaho,  
 in and for the County of Latah, by  
 the above named plaintiff, of the  
 nature in general terms as follows:  
 To secure a decree of divorce from  
 the above named defendant on the  
 grounds of desertion alleged to have  
 taken place between during the fall  
 of the year 1910 and on the ground  
 of nonsupport alleged to have been  
 commenced on or about the month of  
 November, 1910, and both of which  
 said acts are alleged to have contin-  
 ued without interruption up to and  
 including the date hereof.

And you are hereby directed to  
 appear and answer the said complaint  
 within 20 days of the service of this  
 summons, if served within said Judi-  
 cial District, and within forty days  
 if served elsewhere. And you are  
 further notified that unless you so ap-  
 pear and answer said complaint with-  
 in the time herein specified, the plain-  
 tiff will take judgment against you  
 as prayed in said complaint.

Witness my hand and seal of the  
 District Court of the Second Judicial  
 District of the State of Idaho, in and  
 for Latah County, this 29th day of  
 June A. D. 1925.

(SEAL)

 Residence Moscow, Idaho.  
 Attorney for Plaintiff. 27-5t

### Horse Breeding on the Increase

#### Industry Shows Brighter Prospects Than It Has for Several Years.

(Prepared by the United States Department  
 of Agriculture.)

That the breeding of horses and  
 mules is on the increase and that  
 the industry shows brighter prospects  
 than it has for several years, is reflected  
 in the reports received by the United  
 States Department of Agriculture  
 from the sources of authority in the  
 production areas. The number of  
 horses and mules on farms at present  
 is less than it has been at any time  
 for several years. The present price  
 situation, however, shows a decided  
 improvement. On February 15, 1925,  
 the estimated farm prices for horses  
 was \$77.63, which, compared with the  
 \$73.78 valuation of February 15, 1924,  
 is an increase of \$3.85 per head.

#### Paramount Need.

The paramount need of the horse-  
 breeding industry today, says the de-  
 partment, is replacement stock. A sur-  
 vey of the horse situation in Wayne  
 county, Ind., which is probably indica-  
 tive of the general situation, shows  
 that production is far behind replace-  
 ment needs. Of the total horses in  
 the county, but 1.6 per cent were  
 yearlings instead of the 6.7 per cent  
 necessary to maintain the present sup-  
 ply. One-half of the horse stock of  
 the county was over ten years old  
 and one-fifth over fifteen years of age.  
 Market demands at the present time  
 are greatest for high-class draft geld-  
 ings and mules, while saddle stock of  
 merit is generally readily disposed of  
 at good prices. It is important now,  
 says the department, that only the  
 best available mares be bred to good  
 stallions in producing high-class horses  
 for a discriminating market.

#### breeders Discriminate.

That horse breeders are using dis-  
 crimination in their breeding opera-  
 tions is disclosed in the increased per-  
 centage of pure-bred stallions among  
 all stallions standing for public serv-  
 ices. While there has been a decline  
 in the total number of stallions in  
 service as compared to that of last  
 year, the decline has been greatest  
 among the grades, scrubs, and mong-  
 rels. At present, 82 per cent of the  
 stallions standing for public service  
 are pure bred, as compared to 79.26  
 per cent last year. The percentage of  
 pure breeds among the jacks is about  
 the same as last year, or 64 per cent.  
 The grades, scrubs, and mongrels are  
 gradually being eliminated from public  
 service because of their lack of busi-  
 ness.

#### Breaking Up Broody Hen Often Is a Big Problem

When hens that are not needed for  
 setting become broody the producer  
 has a problem on his hands of induc-  
 ing them to start laying again with as  
 little loss of time as possible. The fa-  
 vorite method of many people is to put  
 the broody hens in a pen and give  
 them treatment which corresponds to  
 the bread-and-water treatment some-  
 times given to certain individuals of  
 the human race.

The part of this treatment which  
 puts the broody hen in a slatted pen  
 which offers no opportunity for nest-  
 ing is satisfactory. If the hens are  
 well fed and cared for it will shorten  
 the time which the hens will be idle  
 from laying. The best results come  
 from continuing the same ration which  
 has been fed previously. Starvation  
 and mistreatment are not only inhu-  
 man but are a losing practice from  
 the standpoint of production.

#### Important Item

The most important item in poultry  
 raising is to keep the flock healthy.  
 Numerous diseases cut down profits  
 where they are allowed to get started.  
 It rarely pays to doctor a sick hen—  
 unless she is a very valuable bird—  
 the best cure being prevention. Eter-  
 nal vigilance is necessary to keep  
 poultry well and thriving, and the  
 best preventive measures are perfect  
 sanitation. Old yards become foul  
 with disease germs and should be  
 changed.

#### Prepare Ground Properly

If the orchard land is not broken  
 when your fruit trees arrive, do not  
 be misled by the thought that it is  
 necessary to set the trees at once and  
 neglect to prepare the ground prop-  
 erly. Simply bury the roots of the trees  
 deeply in well-drained soil until you  
 have everything in readiness for plant-  
 ing. With this treatment, trees will  
 keep in perfect condition for several  
 weeks or more.

#### Value of Beet Tops

Beet tops have considerable value  
 as feed. They are of most value when  
 fed fresh from the field. If they can-  
 not be fed to advantage during the  
 early fall, they may be put in the silo.  
 Much better silage is made if one-  
 half beet tops and one-half dry corn-  
 stalks are used. Add enough water  
 so the mass will pack well.  
 Beet tops dried or frozen lose much  
 of their feeding value.

#### Importance of Garden

The farm garden is an important  
 source of income to the farmer. It  
 should be planned carefully so that  
 it will provide garden products for  
 the table throughout the season. This  
 will make it possible to avoid cash  
 expenditures for groceries, thereby  
 increasing the funds available for  
 other purposes.

### Tuberculin Test Is Gaining in Favor

#### Clean-Ups Rapidly Coming to Be Order of Day in Various Sections.

(Prepared by the United States Department  
 of Agriculture.)

Wholesale clean-ups are rapidly  
 coming to be the order of the day in  
 the nation-wide campaign against cat-  
 tle tuberculosis waged by the state  
 and federal governments. The area  
 plan of purging a whole county of TB,  
 at one swoop instead of proceeding on  
 the hit-and-miss style, or the herd-by-  
 herd method with which the campaign  
 started, is finding favor all over the  
 country because of its economic merits  
 and other features of speed, efficiency,  
 and success.

#### Many Counties in Move.

Five hundred and thirty counties are  
 now actively engaged in a county-wide  
 movement to remove the last trace of  
 the infection in the cattle within their  
 borders and thus win for themselves  
 the coveted title and reputation of  
 "modified accredited areas." To date  
 60 counties, representing 14 states,  
 have achieved that standard of clean-  
 liness. The most recent areas to be  
 added to the list, issued monthly by  
 the United States Department of Agri-  
 culture, are Jasper and Pottawatomie  
 counties in Iowa, Moore and Polk  
 counties in North Carolina, and Barnes  
 and Benson counties in North Dakota.  
 The state of New Mexico is even  
 more aggressive in its attitude toward  
 tuberculous cattle and is planning a  
 campaign to test all the cattle within  
 the state so as to establish the whole  
 state as a modified accredited area.  
 Several of the state legislatures now  
 in session have provided adequate  
 laws and appropriations for carrying  
 on the area work. The New York leg-  
 islature, recently adjourned, appropri-  
 ated \$2,000,000 for the payment of in-  
 demnities for tuberculous cattle con-  
 demned during the last six months of  
 this year. It is expected that a like  
 amount will be appropriated for the  
 first six months of 1926.

#### Popular Area Plan.

The gradual change from the herd-  
 to-herd method of lighting the disease  
 to the popular area plan is indicated  
 by some comparable figures gathered  
 by the department. During February  
 of this year 35,818 herds of cattle were  
 tested under the area plan and only  
 7,532 herds tested under the accredited  
 herd plan. The number of cattle tested  
 in the area work amounted to 390,875,  
 and the number in the individual herd  
 testing amounted to 148,495. From  
 July, 1924, to and including February,  
 1925, under the area plan there were  
 tested 2,890,686 cattle, while under the  
 accredited herd plan there were 1,284-  
 927 cattle tested.

#### Lamb Discriminations

The market discriminates very se-  
 verely against lambs that have not  
 been castrated, and against lambs that  
 have not been docked. These opera-  
 tions are simple and easy if performed  
 while the lambs are young. Both  
 should be done before lambs are three  
 weeks old.

#### To Polish Knives

If a strip of carpet is tucked to the  
 knife board and sprinkled with brick-  
 dust an excellent polish may be given  
 to steel knives without scratching  
 them.

#### BIG BEAR RIDGE

Mrs. Mable Holmes has returned  
 to her home in Portland, Oregon,  
 having visited at the home of her  
 mother, Mrs. Ida Comstock.

Mr. and Mrs. Otto Alber are driv-  
 ing a new Chevrolet touring car.  
 Nel Nelson of Little Bear ridge  
 was a visitor at the home of his  
 brother, Anton Nelson, Tuesday.

Miss Rilla Davidson of Kendrick  
 is spending the week with Mrs.  
 Wade Keene.

Witbur Mabcock, son, and daugh-  
 ter, Miss Ruth of St. Maries were  
 recent visitors at the home of his  
 mother, Mrs. Ida Comstock.

Thorvald Nelson returned to his  
 home in Agawam, Montana, Sunday,  
 after a week visit with relatives  
 and friends.

Miss Carol Sternberg of Moscow,  
 spent last week with Miss Helen  
 Slind.

Mr. and Mrs. Isaac Lien spent last  
 week at the C. J. Munson home at  
 Avon.

Miss Flora Heath and brothers,  
 Edgar, Eugene and Donald, went to  
 Craigmont, Sunday, to spend some  
 time with their grand mother, Mrs.  
 Kittrell.

Mr. and Mrs. Waide Keene and  
 children attended the college of  
 agriculture Field Day in Moscow,  
 Friday.

 home from a visit with friends in  
 Spokane.

Hans Peterson and daughter, Miss  
 Ester, of Deary, spent Sunday with  
 friends here.

Mr. and Mrs. Horace Comstock  
 and children of St. Maries are vis-  
 iting relatives here.

The Ladies guild wish to thank  
 you one and all for making the  
 social Saturday evening, a success,  
 both socially and financially. The  
 total amount taken in from the  
 sale of ice cream and cake and the  
 bill paid was \$29.50.

Born to Mr and Mrs. Oscar Gus-  
 tafson, a daughter.

Mrs. Rachal Ried has been visit-  
 ing at the home of her son, W. W.  
 Ried and family.

Mr. and Mrs. Jake Alber and  
 family attended the ice cream  
 social Saturday evening.

#### LELAND NEWS

The ladies of the Missionary  
 Society will hold an ice cream  
 social at the hall, Saturday, even-  
 ing, July 25th. Remember the date.

Mr. and Mrs. Kauffman of Mis-  
 souri, are here visiting his sister,  
 Mrs. B. F. Freshman.

Rev. C. J. Tabor enjoyed a visit  
 from his father and mother of Lew-  
 iston, last week.

Threshing is under way now,  
 Jess Hoffman started Tuesday on  
 Arthur Lock's crop and already  
 grain is being hauled.

Rev. A. Janes of Juliaetta preach-  
 ed at Leland, Sunday, morning and  
 Rev. Tabor filled the pulpit at the  
 Baptist church of Juliaetta.

All the young people are busy hoe-  
 ing beans and there is quite a scarc-  
 ity of help at that.

#### CRESCENT CLIPPINGS

Geo. Souders is home from Wal-  
 lace to spend his vacation with his  
 parents.

Mr. and Mrs. Wm. Kauder were  
 business visitors in Southwick, Fri-  
 day afternoon.

 family visited Sunday afternoon at  
 the John Darby home.

Harve Woodruff from Spaulding,  
 has been visiting with the I. T.  
 Kimbley family.

Imogene Trail spent Sunday with  
 home folks. She has been working  
 at the Bateman home.

Mr. and Mrs. Clem Israel and  
 family left Monday for a trip to  
 the coast.

Mr. and Mrs. H. H. Pogue visit-  
 ed at the Axel Eckman home Sun-  
 day.

Sunday guests at the A. Doren-  
 dorf home in honor of Miss Ada-  
 line's birthday were: The M. Forest  
 I. T. Kimbley and I. Kyle families,  
 Mr. and Mrs. L. Wright and son,  
 Richard, Gladys and Emma Starr,  
 Roy Bohn and Alfred Adams.

#### LINDEN LOCALS

Mrs. Earnest Goodnight returned  
 to her home at Nampa, Idaho, Wed-  
 nesday. She was accompanied as  
 far as Lewiston by her mother, Mrs.  
 La ngfellow.

Miss Thelma Hatist of Portland, Oregon, is visiting at the home of her grandparents, Mr. and Mrs. Nick Brocke.

Dr. Ernest E. Hubart, of the U. S. Forest Products Laboratory of Madison, Wisconsin, has been elected to fill the vacancy at the University of Idaho forestry department, caused by the resignation of Dr. Henry Schmitz.

An announcement will be found in another section of this issue, stating that Dr. A. E. Jones, eyesight specialist, will be in Kendrick August 3.

An exchange stated that those who make their own fruit ice cream should freeze it about halfway before adding the fruit, this will prevent the fruit from settling to the bottom of the freezer.

The annual July Clearance sale at the N. B. Long & Sons store started yesterday and in another section of this paper will be found a large advertisement calling your attention to many bargains which they are offering in the various departments of their store.

Sam Bechtol was transacting business in Moscow, Thursday.

Work was completed recently on the tower of the tramway at the Vollmer-Clearwater warehouse and grain is now being received over it. The tower, which replaces the one blown down last fall, is 135 feet high and was built by the Barnum Lumber & Mill Co.

Mrs. Louie Pearson and Miss Margaret Brocke are in charge of John's Confectionery during the absence of Mr. and Mrs. John Halseth. Frank Brocke is assisting them during the evenings.

Mrs. Herman Busse, who arrived here last week for a short visit with her father, Geo. E. Knepper, left Sunday for Honolulu, to visit her sister, Margaret Knepper, who is head of the International Institute of the Y. W. C. A. Mrs. Busse expects to return about the first of September.

Fred C. Choate, Jr. and Mrs. Wycliffe R. Smith were tried before a jury of six in the probate court at Orofino last week. They were acquitted of the charge of lewd cohabitation placed against them by County Attorney Arthur S. Guerin. The alleged offence was supposed to have taken place on or about the 15th of May, this year, at a camp across the river from the mouth of Elk creek.

**TENNIS SHARK HERE.**

Tennis lovers were treated to a good exhibition of the game here last Friday afternoon when Herb Southard from San Francisco, late of Spokane and a runnerup in the Inland Empire Tennis Tournament held at Potlatch Idaho July 1st, 2nd, and 3rd, showed us some fancy strokes, playing some of the best players we have.

R. H. Ramey made a fair showing in two sets of singles, losing by 7-5 and 10-8.

Southard paired with Bob Newton, won from Ramey and Gardner in one set of doubles 6-3, while Ramey and Gardner won from Southard and Mrs. McKeever in one set 10-8. One more set of singles were played by Southard and Ramey, the former winning 6-0.

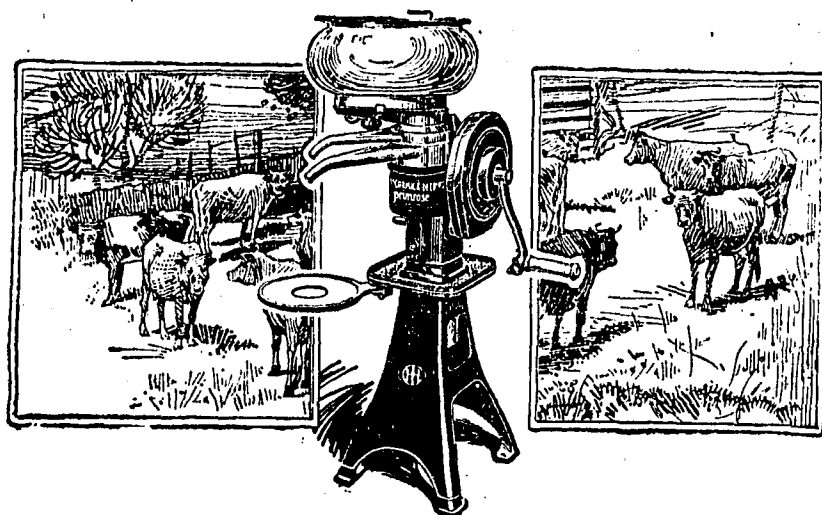

We expect one or two good players here from Pullman next Saturday and Sunday. All interested be on hand.
