The headline "No future for prohibition" sounds startling but when one reads a little farther and finds that the statement comes from the head of the association against the prohibition amendment, it may be discounted 100 per cent and put down as propaganda, pure and simple. Most of the talk that tends to place the prohibition amendment in an unfavorable light has its source among the wets and they are still safely in the minority.

Press dispatches say that Ford will make the airplanes safe. Maybe, like the Ford car, their safety lies in the fact that they won't start.

A learned professor says that the United States produces 60 per cent of the world's pig iron, and 99 per cent of the world's road hogs.

Experienced newspaper men always direct the youngsters on the paper that in reporting news items the vital thing to get into the story is "What, When, Where, Why?" We learned the lesson long ago. That's the reason we considered an item, just read in a news dispatch, about the marriage of a girl in her teens to a man of over 75, as being incomplete, inasmuch as it did not state how much money the old man had. The "why" was left out of the story.—Ex.

Records Tell of Profits or Loss

Accounts Will Show Whether Farm Is Making or Losing Any Money.

The most valuable records that one can keep on the farm are those that tell the most about the farm business and help one to make changes that will prove most profitable.

It is very easy to become confused with an unrelated mass of figures and as a result the operator will get no real benefit from them. There are some farm records, however, that every farmer should keep in a clear and concise manner if he would know more about his business.

First Inventory.
The first is the inventory which is a list of everything owned and used in operating the farm. Not only the number but the values are recorded. This includes land, buildings, all live stock, equipment, feed and supplies, what you owe and what other people owe you.

The second is a record of the farm receipts. This contains an account of everything you sell from the farm, the quantity and the price you receive for it.

The third is a list of farm expenses and here you record all money paid out for the operating of the farm or the paying of farm debts.

These three records will show whether the farm is making money or losing money. They will show where you get your money and how you spend it. It will undoubtedly emphasize the importance of some of the minor enterprises of the farm, such as the sale of chickens, eggs, butter, etc.

Inventory Indispensable.
Without the inventory it is impossible to know whether the farm is getting ahead or going back. An increase or decrease in what you own will show up here.

Very little time is required to keep these records. Those who keep them declare that this work pays a better rate per hour than many other operations on the farm.

Do you have an account book this year? If not, let's hear from you—Thomas H. Summers, Extension Service, Colorado Agricultural College.

Barley Is Unsurpassed as Legume Nurse Crop

Barley is unsurpassed as a nurse crop for clovers and alfalfa; it is a better feed than oats for fattening hogs, sheep and cattle; and since it is one of the best substitutes for corn, its early-maturing quality will make this grain doubly valuable in a short-corn summer.

These are the reasons why crop specialists are advising farmers to plant barley next spring.

The early-maturing quality of barley gives it a distinct advantage over oats. This is especially true during the present corn shortage. The grain can be threshed about the same time as wheat, eliminating two threshings

and making available a midsummer grain feed.

Barley is decidedly superior to late oats as a nurse crop for clovers and alfalfa because it shades the ground less, and by its early maturity leaves more moisture in the ground for the young clover.

Chiefly because of its lower percentage of hulls, barley is a better feed than oats for fattening hogs, sheep and cattle. Barley contains more carbohydrates than either wheat or oats, has less fat, and contains only one-third as much crude fiber as oats.

Clover Lowered Cost of Producing Pork in Test

A feeding trial was recently conducted by a Missouri farmer in cooperation with the Missouri experiment station. One lot of fall pigs weighing 94 pounds per head was turned into a blue grass pasture and given corn and linseed meal as a grain ration. Another similar lot was given a clover pasture and fed corn and tankage. Here is what happened: The blue grass lot gained 1.07 pounds per head per day for 42 days, while the clover lot gained 2 pounds a day for 25 days. It required 6.75 bushels corn and 7.5 pounds linseed meal to produce 100 pounds of gain in the blue grass lot and only 6 bushels corn and 2.5 pounds tankage to make the same gain by the clover lot.

The outstanding fact in this test was the superiority of clover over blue grass for rapid as well as economical gains.

Twelve Links in Clean Milk Chain

Healthy Herd and Careful Attention to Details Quite Important.

Contrary to a somewhat common belief, it does not require expensive equipment, high priced cows, or much extra work to produce clean milk.

With a healthy herd, kept in a clean stable and yard which can be kept clean easily, and with careful attention being given to details a milk can be produced, according to E. H. Farrington and L. C. Thompson, dairy specialists at the Wisconsin College of Agriculture, which is both highly nutritious and wholesome.

Since the reputation of many a farm and factory is based on the purity of its products it is quite important that all of the aids to clean milk production be known. The first consideration, the experts point out, is that of a clean herd. Good milk cannot be produced from diseased cows. A clean stable also aids immensely in the production of clean milk.

Must Exercise Care.
Good ventilation is also an important factor. It is quite important that animals secure plenty of pure fresh air since tuberculosis spreads faster and gains an easier foothold where fresh air is not provided in abundance. A dry barnyard and the removal of the manure some distance from the barn will aid greatly in reducing the number of flies which, in the summer, annoy the cows and the milkers.

The value of pure water, abundant sunlight, and careful feeding cannot be overemphasized according to the specialists. The matter of clean milking and clean utensils are intimately associated, for great numbers of bacteria may be introduced into milk from the bottles of the cows and from unsterilized utensils. Quick cooling of milk to lower temperatures prevents bacterial growth and aids in the production of better milk which will keep longer and make finer dairy products.

Prompt Delivery Necessary.
After the milk has been produced under conditions which are as near ideal as possible it is important that it be delivered promptly to careful customers, Farrington and Thompson declare. They report that milk should be kept in cold water until it is loaded onto the wagon to go to the station or receiving plant.

Clean milk means fewer complaints, a better class of patrons, and a steady market for the product, the specialists conclude.

Lamp Chimney Treatment
After having washed lamp chimneys in soap and water you should scald them with clear water. They can be dried much more quickly if treated in this way and will be perfectly clear.

FIFTY YEARS AGO—

Nobody ever got a wrong number.

Nobody ever got an electric light bill.

Nobody ever had a flat tire.

Nobody cursed static.

Nobody read titles out loud in a movie.

Nobody had heard of Hi Johnson, Bob La Follette, the farm bloc, the German crown prince, mah jongg or jazz.—From the Cincinnati Enquirer.

How are your eyes? Do your glasses need changing or adjusting? Dr. A. E. Jones, specialist, will be at the Commercial Hotel, Wednesday, October 7th. We ask you when in Spokane to please call at the Jones Optical Co., 315 Exchange Bank Bldg.

Travel by Caravan
The word "caravan" has special reference to a company of travelers, merchants or pilgrims associated together for mutual security. It used to be especially used in reference to such companies when traveling through deserts or regions infested by robbers.

To Bring Back Color
A very simple process will restore carvings that have become discolored. Paint them with spirits of turpentine and expose them to the sunshine for a few days. This treatment will also prove beneficial to ivory piano keys when they begin to turn yellow.

Do You Know?

That we are selling furniture and house furnishings in various styles and grades and that we are selling better goods for less money, right here in Kendrick than can be bought in any town or city in the northwest.

Wall Paper

We are adding a line of wall paper, priced from 10c a roll up to the best on the market. We will have some dandy paper at 15c and 20c per roll.

We will appreciate your patronage

Natural Crossing in Oats Is Very Small

Experiments Show One Per Cent in Iowar Variety.

(Prepared by the United States Department of Agriculture.)

It has long been recognized that when two varieties of corn are grown in rows side by side a certain amount of natural crossing takes place. A row of white corn growing next to a row of yellow corn, for instance, will produce ears that have numerous yellow kernels. Also it has long been a general belief that the so-called close-fertilized cereals, like wheat, oats and barley, very rarely cross naturally; that is, a row of white oats, for instance, growing beside a row of black oats would produce white kernels only. Artificial methods of crossing the two kinds of oats were necessarily resorted to when plant breeders desired a cross. Seedsmen, therefore, have grown plants of one strain of oats next to plants of another strain, feeling assured that each seed plant would remain pure.

Such is not the case, however, according to the United States Department of Agriculture. Experimental work with oats at the Akron (Colo.) field station has shown that without doubt natural crosses do occur in oats the same as in corn, although to far less extent. The extent of natural

crossing in oats varied with the different varieties. It was greater in some selections than others from the same variety. The greatest percentage of natural crosses was observed in the Iowar variety, in which an average of nearly 1 per cent of crosses was found. The natural crossing of oats is so small that it is of no particular significance to the average farmer even though he does grow his own seed oats. It is of importance, however, to the cereal investigator and nursery seed producers. The need for formulating better methods in plant and nursery technique in conducting experiments with oats is apparent if the factor of natural crossing is to be eliminated.

Biggest Dairy Problem

While much attention in the dairy field has been given to marketing—co-operative marketing—during the last few years, such authorities as Canon of Purdue still believe the outstanding problem of the dairy industry is the reduction of the cost of producing dairy products. Canon would begin by improving dairy breeding as an outstanding important step. He says slightly less than 3 per cent of all the dairy cattle in the United States are registered in the books of the various organizations.

Not Worth Acquiring

Pride either finds a desert or makes one, submission cannot tame its ferocity, and it requires very costly food—its keeper's happiness.

SUMMONS

In the District Court of the Second Judicial District of the State of Idaho, in and for Latah County. James Tobin, Plaintiff, vs.

Hans C. J. Tweedt and all unknown heirs and all unknown devisees of Susan H. Tweedt, deceased, and all unknown owners of and all unknown claimants to any right or title to or interest in or lien or claim upon the Southeast Quarter (SE1-4) and the South Half (S1-2) of the Northwest Quarter (NW1-4) and the North Half of the Southwest Quarter (N1-2 SW1-4) of Section One (1), and Lots One (1) and Two (2) and the South Half of the Northeast Quarter (SE1-2 NE1-4) and the North Half of the Southeast Quarter (N1-2 SE1-4) of Section Two (2) all in Township Thirty-seven (37) North, Range Five (5) West of the Boise Meridian, in Latah County, State of Idaho, containing 562 acres more or less. Defendants. The State of Idaho Sends Greetings To The Above Named Defendants: You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah, by the above named plaintiff of the nature in general terms as follows: To quiet title in plaintiff to the following described lands and premises situate in Latah County, State of Idaho, to-wit:

The Southeast Quarter (SE1-4) and the South Half (S1-2) of the Northwest Quarter (NW1-4) and the North Half of the Southwest Quarter (N1-2 SW1-4) of Section One (1), and Lots One (1) and Two (2) and the South Half of the Northeast Quarter (SE1-2 NE1-4) and the North Half of the Southeast Quarter (N1-2 SE1-4) of Section Two (2) all in Township Thirty-seven (37) North, of Range Five (5) West of the Boise Meridian, containing 562 acres more or less.

And you are hereby directed to appear and answer the said complaint within 20 days of the service of this summons, if served within said judicial district, and within forty days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in and for Latah County this 25th day of August, A. D. 1925.

HARRY A. THATCHER Clerk.
By ADRIAN NELSON, Deputy.

A Farm Bargain

Here is a real farm with real buildings in a real best district. Every one in this part of the country knows what the land is on Little Bear Ridge and when you add that here is one of the most highly improved ranches on the ridge with a fine set of new buildings which cost better than \$8,000 and the owner is offering the whole thing with 140 acres in cultivation and 60 acres in pasture for \$18,000 you will know that here is one of the best buys in farm land in the whole Northwest Country. Veatch Realty Co., Moscow, Idaho. 40-1t

DAIRY FACTS

KEEPING MILK FROM SOURING IN SUMMER

If milk is to be kept from souring during shipment in the hot summer months, it should be cooled as soon as it is drawn from the cow, advises the dairy department of the New Jersey agricultural experiment station. The following tips for the dairyman are added:

1. Have the tank water at 40 degrees Fahrenheit or lower before milking. In addition at least two pounds of ice is needed for every gallon of milk to be stored if the milk is cooled over the surface cooler to 68 degrees Fahrenheit or below.
2. Start water running through the surface cooler. For every gallon of milk cooled, ten or fifteen gallons of water should pass through the cooler.
3. Pour milk over the cooler as soon as drawn from the cow. Cool cream as soon as separated.
4. Milk should flow slowly over the cooler and be cooled to within three degrees of the temperature of the water.
5. When a can is filled from the surface cooler, set it into the tank immediately. Always have ice in the tank when cream or milk is being stored, unless the water is below 45 degrees Fahrenheit. The water should reach to the necks of the cans.
6. Keep cans in storage tank until ready to ship. During hauling, protect them with blankets or felt jackets. The cooling tank is best made with a 2-inch layer of cork between a double shell of 4-inch concrete. One made of 2-inch plank is next best. Tanks of plain concrete or metal require more ice for cooling. Provide a tight cover.

A tank capacity of three gallons of water for each gallon of milk is necessary when ice is used. Otherwise, double the capacity is required.

The cans should be set in the tank on a rack so that the water can circulate under them. Arrange a drain so that the tank can be emptied and cleaned frequently. Water should enter the tank near the bottom.

DAIRY THE DAIRY

BLUE GRASS LISTED AS PAYING PASTURE

Kentucky blue grass is the ideal grass for pastures, says J. W. White, soils research specialist of the Pennsylvania State College experiment station. It is high in nutritive value and also in its ability to improve the fertility of the soil.

According to White, approximately four million acres, or one-third of the total improved farm land in Pennsylvania is in pasture. A large percentage of this is either located on rough mountainous land unsuited for tillage, or on land that has been depleted of fertility by continuous cropping without return of sufficient plant food. This so-called pasture land is of little economic value in this state, he says, and it requires many acres of such pasture to maintain a grazing animal, such as a dairy cow.

"Farmers too often utilize all their best land for cultivation; thus making it necessary to use the poorer land for pasture," states White. "This inherited practice should be overcome by the dairy farmer, because by following it he is not getting the best returns from his land."

Most of the pasture studies conducted by eastern experiment stations have dealt largely with an attempt to rejuvenate old pastures of extensive acreages rather than to attempt to develop highly productive pastures on farm land similar to that used for general farm crops. White has been using high-grade soils for permanent pasture experiments.

Experiments conducted at the experiment station on the same soils and with the same treatment show the value of blue grass pasture compared to a grain rotation. In one of these where complete fertilizers were used the pasture, which contained four acres, on the average produced 1,988 pounds of crude digestible proteins as compared with 633 pounds produced on the same number of acres in a four-year rotation.

Dysentery or Scours in Calves Is Preventable

Dysentery or scours in new-born calves is commonly called "white scours" or "calf cholera" and is caused by germs born in the calf or contracted by way of the navel or mouth just after birth. There is no specific medicinal remedy, but the disease can be prevented with a fair degree of success in the following way: Provide a new, sanitary calving pen and calf pen. At birth, saturate the stump of the navel with tincture of iodine and then dust it with powdered starch or finely sifted slacked lime. Cleanse and disinfect the cow's udder and teats before the calf is allowed to nurse. As soon as possible after birth have a veterinarian immunize each calf with polyvalent calf dysentery serum, or white scours bacterin. The serum has also some remedial effect. When the disease is prevalent in a herd it is best not to let calves nurse their dams but to feed milk from a cow that has been "fresh" for some time.

Certain Feeds Tend to Give Undesirable Odors

The fact that certain feeds fed under certain conditions tend to produce undesirable flavors and odors in milk has caused the United States dairy bureau to conduct feeding trials and determine results with a view to making suggestions helpful to farmers in overcoming the difficulty.

Department bulletins entitled as follows have been issued by the United States Department of Agriculture: Bulletin No. 1097, "The Effect of Silage on the Flavor and Odor of Milk"; No. 1100, "Effect of Feeding Green Alfalfa and Green Corn on the Flavor and Odor of Milk"; No. 1208, "Effect of Feeding Turnips on the Flavor and Odor of Milk"; and No. 1297, "Effect of Feeding Cabbage and Potatoes on Flavor and Odor of Milk."

These bulletins may be secured by writing to the United States Department of Agriculture, Washington, D. C.

Dairy Notes

Watch calves fed alfalfa for any tendency toward scouring.

The scrub bull in a herd is far more destructive than the proverbial "bull in a china shop."

The value and importance of using good bulls is essential to the economical development of the dairy industry.

More and more dairy farmers are selling their "star boarders" for beef as the work of the cow-testing associations spreads.

Ground oats are especially good for bulls. Cottonseed meal is generally looked upon with disfavor, since it may cause impotency.

In order to get a profit from milking cows it is necessary to keep good animals and to give them good care. This means a comfortable barn, a silo and plenty of hay and forage.

When they fail to respond to increases in the size of the ration, feed dairy cows according to production if you would profit according to feeding

CAMERON NEWS

Rev. and Mrs. Kein motored to Lewiston, Sunday afternoon where Mr. Kein held a funeral service for the late John Schmidt.

Mr. and Mrs. Blum and daughter, Laura, and Mr. Dancy motored to Elk River, Saturday and returned Sunday.

Miss Josie Wilken was the week end guest of Minnie Blum.

A son was born to Mr. and Mrs. Otto Sillfow, Friday, at a Spokane hospital.

Mr. and Mrs. Gus Kruger and Mrs. Fred Sillfow were Lewiston visitors, Monday. While there Gus purchased a home and will move soon.

Mr. and Mrs. Gus Boemeke of Spokane were visiting at the C. J. Boemeke home, Sunday.

Otto Sillfow motored to Spokane, Saturday, returning Tuesday.

LINDEN LOCALS

Mr. and Mrs. Harris of Troy spent Tuesday with their son, C. E. Harris and family.

Mr. and Mrs. Louis Alexander entertained F. C. Loyns family and Mrs. Emma Longfellow at Sunday dinner.

Mr. and Mrs. Reube Garner and Charley Garner of Elk River and Mrs. Jim Garner spent Sunday at the George Garner home.

Aunt Carrie and Arley Allen visited at the Harry Langdon home on American ridge, Saturday.

Mr. and Mrs. Wegner and Clarence Fry attended the sale near Kendrick, Friday.

Fred Crocker, Albert Dorendorf and Clarence Harris left Monday morning on a hunting trip in the Lochsa country.

Mr. and Mrs. Perry returned Sunday to their home at St. Maries after a weeks visit with Mr. and Mrs. W. M. Sadler.

Mr. and Mrs. James Ball spent Sunday at the Gus Farrington home.

SOUTHWICK NEWS

Leslie Triplett threshed a forty acre field of beans that yielded a little better than nine sacks per acre. He got 365 sacks from the piece.

J. K. King and son, Ray, and Floyd Russell and wife were Kendrick visitors, Monday.

Mr. and Mrs. Clinton Wright spent Sunday with George Christensen and family of Crescent.

Miss Nellie Henderson and Rowena Russell were the guests of Nauvau and Eva McCoy, Sunday.

Earl Fairley and wife spent the week end in Peck returning home Sunday.

The high school students gave their teacher, Prof. Chandler, a surprise party Friday evening. A good time was reported.

Mrs. George of Seattle is here visiting with her daughter, Mrs. Ray Cuddy.

Mrs. Delberville of Seattle is spending a few weeks with her parents, Mr. and Mrs. Frank Bunger.

Chester Melver has begun work on a new residence. John Holmes and Mitch Blackburn are helping with the work.

George Souder of Burke passed through town, Sunday, for a short visit with his parents at Crescent. He returned to Burke Sunday night.

The rain that fell Sunday night has put a stop to the bean threshing for a while.

Miss Josie Mathews is attending school at Peck.

A wolf has been seen by some of the truckmen in the vicinity of Southwick. It was seen helping

itself to some of Ray Cuddy's chickens. No one was home at the time.

Lon Douglas and Elbert Armistead of Moscow spent the week end with their parents.

Wm. Stamp and wife and Given Mustoe and wife motored to Spokane, Monday.

The Gentle Art

"I did not provoke her. I bit her and pulled out her hair in self-defense," said a Willesden witness.—Tit-Bits.

CALF WILL THRIVE IF STARTED RIGHT

At the age of two weeks the calf will thrive best on whole milk of a somewhat low butterfat content fed at body temperature for the next two weeks. When at the age of four weeks the milk may be gradually changed from whole to skim; this change should take about a week so as to avoid any digestive disorders. At no time should the calf receive over 16 pounds of skim milk a day until after it is four months old, at which time it is usually more profitable to feed the skim milk to hogs or

poultry, or if the market is a whole milk market, it will be needed in this form.

After the calf is on skim milk twice a day feeding is the most practical. Care, however, should be exercised in keeping bright green alfalfa hay before the calves and to let them eat a little fresh ensilage at least once a day.

It is important that growing calves should be fed a grain mixture that is high in the growth producing, or protein concentrates. For this purpose it is recommended that from one to three pounds of the following mixture be fed to growing calves in addition to alfalfa ensilage and warm skim milk:

25 lbs. corn meal
35 lbs. ground oats
25 lbs. wheat bran
15 lbs. lincseed oil.

If oats are hard to obtain, this portion of the mixture may be partially substituted with barley. As the calves grow older corn chop may be used in the place of corn meal.

An abundance of clear fresh water should always be accessible and care should be exercised in keeping the calves' quarters clean, well bedded and dry, so as to guard against the contraction of pneumonia or like diseases.—H. R. Linselles, field man, Colorado state dairy commission.

CATARRHAL DEAFNESS

is often caused by an inflamed condition of the mucous lining of the Eustachian Tube. When this tube is inflamed you have a rumbling sound or imperfect hearing. Unless the inflammation can be reduced, your hearing may be destroyed forever.

HALL'S CATARRH MEDICINE will do what we claim for it—rid your system of Catarrh or Deafness caused by Catarrh. HALL'S CATARRH MEDICINE has been successful in the treatment of Catarrh for over Forty Years.

GLEANINGS

Mr. and Mrs. C. J. Andrews and little daughter of Potlatch, visited friends in Kendrick the first of the week.

Charles McKeever arrived last Friday afternoon from Coeur d'Alene to visit his son, Dr. McKeever. He spent several days here and during that time constructed a first class concrete sidewalk in front of his residence.

Mr. and Mrs. Tucker and children of Clarkston, spent Sunday in Kendrick, the guests of Mr. and Mrs. E. H. Emery.

Mr. and Mrs. Robert Spencer and son, Donald, of Moscow, spent the week end at the home of Mr. and Mrs. Geo. Leith.

H. R. Haizlip was a visitor in Lewiston over the week end.

Miss Marian Leslie of Spokane, arrived Monday afternoon to visit her aunt, Mrs. H. P. Thall.

Mr. and Mrs. John F. Waide and family of Deary spent Sunday in Kendrick with relatives.

Gus Kruger of Cameron is having advertising matter printed for a public sale at his place Wednesday, October 14. He has decided to quit farming.

Mrs. Frank Benschoter went to Lewiston, last Saturday to visit her daughter, Mrs. Neal Nelson.

Miss Genevieve Stanton, daughter of Mr. and Mrs. Sam Stanton, left Saturday for Astoria, Oregon, where she will visit her brother, Lloyd.

C. G. Compton went to Orofino last week on business.

Mrs. Hugh Stanton was a passenger to Greer last Saturday afternoon, where she will visit her mother.

Mrs. H. P. Wilcox and Mrs. H. Helpman, both recently of Coeur d'Alene, are now in full charge of the Arterraft shop at 812 Main street, having purchased the business from Mrs. H. H. Taylor. Both ladies are of experience in the line in which they now engage in this city. The stocks are now fully replenished and being added to daily. A new department in the store is an infants wear section. —Tribune.

Zack Aas of Bear ridge drove a new Chevrolet car home last Tuesday afternoon, which he purchased from the Kendrick Garage Co.

Thursday night of last week the DeWinter & Goudward store at Leland was burglarized. A large number of finger rings, other jewelry, silverware, clothing etc., was taken, the exact amount being hard to determine. The Nez Perce county sheriff's office investigated the robbery but no clues were left by which the guilty parties might be found.

Mrs. G. F. Walker went to Moscow, Thursday of last week and the following morning underwent an operation at the Inland hospital. She is recovering nicely and will probably be able to return home the last of this week.

The radio season is opening up this fall with renewed interest and it is safe to say that many more Potlatchers will stay up half the night during the winter listening in on the world. Local radio dealers have already sold a number of sets and have many more prospects. Each season shows marked development in the receiving sets and those who ought to know say that the new models are just about perfect.

The Latah county commissioners have taken no definite action concerning the surfacing of the section of road between Kendrick and Juliaetta. They are scheduled to meet tomorrow when the matter may be definitely decided.

Neighbors of Oral Craig, who farms extensively on Potlatch ridge, say that he will get a total of 1200 sacks of beans from his 230 acres of bean land. He has threshed most of the crop and is getting a good yield. He and his brother, Claud, have the largest acreage in beans of any two individual growers in the Potlatch country.

Glays Kerns, student at the State College of Washington at Pullman, from Kendrick, has been named as one of the girls who made the women's glee club in the try-outs recently held. Miss Kerns will sing in the first alto section of the club.

Fred Crocker, E. E. McDowell, Aue Dorendorf and Bud Harris left

Tuesday afternoon for the Selway country where they will hunt big game. They left here in Mr. Crocker's truck and will drive as far as the falls, about 18 miles above the mouth of the Selway, and from there they will go by pack train. The upper Selway is considered a good elk country.

Mrs. F. A. Rowe arrived Wednesday afternoon from Spokane to visit her father, George Wright.

Mrs. Claus Eichner of American ridge was a Juliaetta visitor Wednesday.

The little 16 months old daughter of Mr. and Mrs. Hiram Galloway had a very dangerous experience Thursday of last week. She fell down a 20 foot well, which had been covered with boards for a number of years, there being a hole in the boards for the water from the eaves trough to run in. The water in the well was shallow so that she was able to crawl to a narrow ledge of earth just above the water line. Her mother heard her screams and finally located her in the well. Mr. Galloway put a ladder down and soon had the little girl out, badly frightened but uninjured.

Mr. and Mrs. George Edwards of Garfield, Wash., visited Mr. and Mrs. Fred Sparber and family, Sunday. Mrs. Edwards is Mrs. Sparber's sister.

Rev. B. J. Carey of Colton, Wash., was a Kendrick visitor Tuesday afternoon.

John Draper of Southwick is having bills printed this week for a public auction to be held at his place near Southwick, Wednesday afternoon, October 7.

George Leon, hypnotist, showed here Tuesday and Wednesday to good houses both nights. He staged a number of spectacular stunts and the crowd was generally satisfied with the performance. He used local people for his subjects.

Game License Receipts

Boise— Receipts from the sale of fish and game licenses for the first nine months of 1925 were \$104,784.75 or just \$100 more than for the same period of 1923 according to a statement issued Friday by the state fish and game department.

Resident fish and hunting licenses in the number of 47,132 account for the greater part of the revenue although 5108 non-resident fish licenses brought over \$10,000.

In the first nine months of 1923 the sales of resident licenses were 48,240 and the non-resident fish licenses were 3936. Most of these latter licenses are sold in northern Idaho.

In the three-fourths of the year 1924 receipts from licenses amounted to \$111,232.10. The greater part of this came from the sale of 50,128 resident fish and game licenses. In 1922 the sales for the first nine months brought \$112,838.65.

The reason comparisons are made for 1923 and 1925 and 1922 and 1924, J. W. Keefe, chief clerk said, is that 1923 and 1925 are legislative years and at these times the department is slow in getting the licenses in the field because it does not know what the law is going to be until the legislature adjourns. In the "off" years the sale proceeds promptly on April 1 as all licenses expire on March 31 of the year next following their date of issue.

BIG BEAR RIDGE

Miss Claribel Moore is attending the Kendrick high school.

Mrs. A. Kleth returned home last week from a visit at the home of her daughter, Mrs. D. Penland in Orofino.

Mr. and Mrs. Otto Alber and little daughter, Bernadine, were Moscow visitors, Tuesday.

Edwin and Joseph Forest have installed a new DeForest radio set.

Ole Lien returned home last week from a trip to the Giant Ledge mine at Murray, Idaho.

J. J. Slind is still quite ill.

Mr. and Mrs. George Larson and little son, Harold, moved to Kellogg last week.

Mr. and Mrs. Gabriel Forest, Edwin, Joseph and Miss Bertina Forest were visiting friends in Park, Sunday.

Louie Jessup of Yakima, Wash., spent Sunday with Wade Keene.

Mr. and Mrs. H. O. Field of Moscow, and Mr. and Mrs. Leif Field of Colton, Wash., were Sunday visitors here.

Otis Gentry has leased the Ed Lien farm. Mrs. Lien and daughter, Margaret, will move to Deary for the winter.

Mr. and Mrs. Isaac Lien returned last week having visited relatives in Spokane.

Minerals Assist Chicks in Building Framework

The science of feeding growing chicks has developed by leaps and bounds during the last few years. The discovery of vitamins and their relation to poultry feeding, the importance of clean yards and plenty of green feed have made the business of growing poultry more economically successful.

During the last few years more attention has been centered upon the importance of a new element in the ration for growing chicks—minerals or inorganic material. Minerals supply three distinct functions in the chick's ration. They go to build bone, which is the framework of the future pullet or cockerel. A good skeleton is one-half the battle, because on it must be attached the meat and in it must be carried the organs of reproduction, which produce the marketable product, the egg.

Minerals also have been found by scientific tests to aid materially in the digestion of other foods. Lastly, minerals have been found to exercise a very definite relation in building up a natural resistance and immunity against disease.

This is probably accomplished by keeping the birds in perfect physical condition.

What minerals to feed and how to feed them becomes the problem of the feeder of growing chickens during the summer, so that the pullets may be in the pink of condition as to size and vigor for the heavy winter lay.

Famous Fighting Ship

The Confederate armored frigate Virginia was the United States frigate Merrimack, which the Confederates raised after it had been sunk at Norfolk navy yard. They covered it with four-inch iron plates.

TONIGHT and Saturday

WARNER BROS. Classics of the Screen
