**POULTRY**

**MATURING PULLET  
BEFORE SHE LAYS**

One of the best discussions of a good method of finishing pullets comes from the pen of Mrs. George R. Shoup of the Western Washington experiment station, which is as follows:

To put on body growth, give a low open hopper of cracked yellow corn or yellow cornmeal. Keep it full all the time. Feed a full breakfast of sprouted oats or scratch, using so much that a little grain is in the litter at the next feed. At breakfast time or shortly after give sour milk, or a substitute, using four to six quarts to the hundred birds. At 11 a. m. again feed scratch grain and also give a fair-sized amount of green feed. At 2 p. m. another feed of grain and at 5 or 6 p. m., a last feed of grain and also all the greens they can eat. A good growing mash should be before them in hoppers, giving one-quarter as much mash as grain by weight. This program says: "Won't you eat a little?" over and over, and at night you will have the satisfaction of having these young ladies going to bed with crops only partly filled. As long as this is continued you know these birds are growing bodies, not combs, and you may be surprised to find that in four weeks' time these same youngsters will have gained anywhere from three-fourths to one and one-quarter pounds each, without having come into laying. When maturity (full body growth) has been reached, you can put on the laying program and feel that one more point in poultry management has been put under definite control.

A number of such details as this used by one and neglected by another

makes the difference of steady, or spasmodic, egg production during the following year. In short, it helps to make one a poultryman who makes his chickens keep him and not one who just keeps chickens.

**Cholera and Limberneck  
Cause of Poultry Loss**

Cholera and limberneck are two diseases that attack the poultry flocks and cause the loss of a number of birds each year, says D. H. Hall, extension poultry specialist at Clemson college, who suggests below methods of treatment for these troubles.

Cholera is one of the worst diseases that is known in the poultry business. It attacks the fowls very suddenly, and as a rule a poultryman loses from one-third to one-half his flock before he can do anything. The best treatment is to prevent the spread of the disease rather than to treat the sick birds. Spray the house with a 10 per cent solution of some disinfectant, and burn or bury all of the droppings and dead fowls in deep holes. Feed wet mash in troughs so as to prevent spreading through dry mash hoppers. Keep the water fountains clean and use permanganate of potash as an antiseptic in the drinking water.

Limberneck is a disease resulting from poisoning of the fowl caused by feeding on decomposed animal flesh. This disease is characterized by a paralyzed condition of the body. The neck becomes limber and the head cannot be held erect. In treating this disease give each bird two teaspoonfuls of castor oil with a few drops of turpentine, and find the cause of the disease and remove it. Bury or burn all dead fowls.

**Early Land Grant**

The first grant of lands to aid in the construction of a railroad was the act of congress of September 20, 1850 to the state of Illinois. A number of grants of lands to states followed as aids to railroads.

**THE KENDRICK GAZETTE**

Published every Friday at Kendrick, Idaho, by

Ralph B. Knepper

Subscription price.....**\$1.50**

Entered at the post office at Kendrick as second class mail matter.

A rather lengthy press dispatch tells how a young man lost his life while asking a joy ride. Boiled down, the substance of the story was as follows: Started on an auto trip to heaven; permitted the curves of his companion to distract his attention from the curves of the road. Reached his destination by scooting over a cliff.—Caldwell News.

Everything should be done by the citizens of the town to welcome the Methodist ministers who will be here in conference next Monday. The town will, of necessity, be on its good behavior during the two days the conference lasts. There will be 35 or 40 preachers in attendance, so the town should be made too look its best.

We hear the question asked recently: "Isn't the radio fading out?" The fact of the matter is that it is just getting well started. It is now reported to be the third largest industry in the United States.

The world is his who can see thru its pretensions. What deafness, what stone-blind custom, what overgrown error you behold, is there only by sufferance—by your sufferance. See it to be a lie, you have already dealt it its mortal blow. It is a mischievous notion that we are come late into Nature; that the world was finished a long time ago. As the world was plastic, fluid in the hands of God, so it is ever to so much of His attributes as we bring to it. Man is timid, apologetic; he is no longer upright; he dares not say "I think," "I am," but quotes some saint or sage. We are afraid of truth, afraid of fortune, afraid of death, afraid of each other. Trust thyself—every heart vibrates to that iron string. Act singly, what you have already done singly will satisfy you now. Be it how it will, do right now. Always scorn appearances, you always may.—Ralph Waldo Emerson.

There is no other place in the world where more ideal weather conditions could possibly exist for bean harvesting than we are getting here in the Potlatch. There is every prospect that the crop will all be

saved in fine shape as there will be but few scattering fields by the end of this week that are not either stacked or threshed.

It has been estimated that 60 per cent of the farm land in this community was in beans this season, so it can readily be seen that the crop is an important one to this section.

When some community project has come to a successful conclusion, the work that it took to put it over can be traced to a handful of people. The same men usually fall behind every deserving measure and help put it over. Men of this kind are of great value to the community but as a rule there are too few of them. The more of such men in a town the more progress will be made. A few boosters who will use some of their own time for the benefit of the community can make any town a live town.

Don't be bashful about bringing or sending items of news to the Gazette. Giving the reporter an item of news regarding yourself, your family or friends is not a sign of immodesty—it is an act of friendly co-operation. The news-gathering facilities of a paper published in a small town are limited. Giving the paper a bit of news that comes within the radius of your knowledge or observation is a service that the editor appreciates no less than the readers of the paper.

It is becoming more evident every day that there are too many irresponsible motorists on the highways. If it were not for the fact that it would be adding one more law that would probably not be enforced, it ought to be proper to require them to carry liability insurance for the protection of others. If a man who has property drives into another car and smashes it, he can be made to foot the bill. But many drivers have no property except maybe a small equity in a worn-out Ford, which, although of little value, can sometimes cause plenty of damage.

E. W. Howe: There is much to argue about, we do not neglect the opportunity; but at least one thing has been settled. It is that if a man will behave reasonably well, he may get along reasonably well. There is no question of this; everything in experience, history, proves it. The story of every successful man is the same in essential details; he began work young, stuck to it, was reliable, dependable, efficient. He was polite, fair, had respect for the lessons of experience. The story has been told so often that it greatly enrages the loafers; but it is true. The men who have been conspicuous in doing the things worth while have not been entirely happy men; they have not escaped tribulation or trouble, but they have at least been happier, encountered fewer troubles than the loafer, disturber.

**CARD OF THANKS**

We wish to express our heartfelt thanks to our many friends who so kindly assisted us during the illness and after the death of our beloved husband and father, also to those who so kindly contributed the beautiful floral offerings.

**Sussex Has Rare Kernel**

In a piece of pottery discovered in Sussex, England, and thought to date back at least to 700 B. C., there is a kernel of wheat still embedded and in a good state of preservation. The find seems to prove that agriculture was pursued in that part of England at that time and is therefore regarded as historically important.

**Travel by Caravan**

The word "caravan" has special reference to a company of travelers, merchants or pilgrims associated together for mutual security. It used to be especially used in reference to such companies when traveling through deserts or regions infested by robbers.

**To Bring Back Color**

A very simple process will restore carvings that have become discolored. Paint them with spirits of turpentine and expose them to the sunshine for a few days. This treatment will also prove beneficial to ivory piano keys when they begin to turn yellow.

**We Don't Understand**

why people will go to Spokane, Lewiston or Moscow and buy merchandise, particularly furniture and house furnishings, when they can buy exactly the same goods here in Kendrick for less money.

Our regular prices are lower than their special cut prices.

Last Sundays Spokesman-Review carried a big advertisement and here are some of the items:

Their Cut Price	Our Regular Price
Folding card tables \$3.40	<b>\$ 3.25</b>
9x12 Axminster rugs \$29.75	<b>27.50</b>
Hardwood dresser, mirror 22x28. \$27.75	<b>27.25</b>
50 lb. felted cotton mattress, \$18.50	<b>16.50</b>
Simmons "Ace" springs \$21.50	<b>18.00</b>

These are only a few of the savings you can make by trading in Kendrick.

# THE BANKER-EDUCATOR PLAN TO PROMOTE BETTER AGRICULTURE

By D. H. OTIS,  
Agricultural Director, American Bankers Association

Whenever bankers desire to promote actively agricultural improvement in their communities, the state agricultural colleges stand ready to show them the way and to give expert assistance. The purpose of this article is to illustrate the way in which the colleges are getting in contact with the banks, and the kind of assistance they render.

D. H. Otis

As soon as the college has a list of the banks in the state desiring to adopt plans to aid agriculture as indicated by project blanks sent out to all the banks in the state, by the State Bankers Association Agricultural Committee, it gives practical suggestions to each banker on the list as to what he can do to stimulate, organize, and conduct the

work in the particular project he has selected. Then either a department specialist from the college or the county agent gets in personal touch with the banker to assist him in an advisory capacity.

Samples of the project outlines are given below to illustrate the details of the procedure the college takes in accomplishing its plan.

**College Provides Expert Advisers**  
In counties with no county agent a list of the banks desiring to carry on a project is sent to a specialist at the state college, according to the project listed. For instance, the banks desiring to carry on the farm accounts project are assigned to the farm management specialist, those desiring to carry on the legume project to the agronomy specialist, those interested in boys' and girls' club work to the junior extension specialist, and so forth.

In counties that do have a county agent a list of the banks and the projects in which each is interested is sent to him with a request that he get in touch with the bankers and help them in regard to the various projects.

The next step by the college is to write to each banker on the list sending him project outlines and informing him that the county agent or a specialist from the college will get in touch with him. If there is no agent in the county this letter reads as follows:

Union State Bank,  
Bankville.  
Gentlemen—You will find enclosed a brief outline of the farm accounts project in which you have indicated your interest to your State Agricultural Committee and to the Agricultural Commission of the American Bankers Association. I am sure that the specialist from the agricultural college will be pleased to assist you in carrying out the suggestions indicated. We have asked him to get in touch with you.

Director, Agricultural Extension.  
The letter to bankers in counties that do have a county agent informs them that he will get in touch with them.

**Suggests Things the Banker Can Do**  
The project outlines sent to each banker give specific suggestions as to the things he can do to organize the work in his project, and the part he can take in carrying out the work. The more simple and concrete these

suggestions are the more valuable they are to the banker. Following are samples of such project outlines:

### Farm Accounts Project

1. Banker can select group of farmers who can and should undertake the work of farm accounts.
2. Arrange with county agent or specialist from agricultural college for first meeting of the group and select an account book.
3. Assist individuals at their request with information relative to entering accounts and other data properly.
4. Act as or select leader for the group.
5. Assist in checking inventories as a means of securing individual financial statement at close of the year.

### Boys' and Girls' Club Work

1. The banker can arrange with the county agent or the specialist of the agricultural college for organizing a club.
2. Plan to present various types of club work at the next meeting and perfect the organization of a local club.
3. Banker may act as local leader of the club.
4. Cooperate with county agent or specialist in annual "Achievement Day."
5. Banker may offer prizes for club work or otherwise assist in financing same.

### Legume Project

1. The banker can get information from county agent or specialist from the agricultural college on the value of alfalfa, soybean or sweet clover crops to farmers of the community.
2. Arrange for meeting of interested farmers with county agent or specialist.
3. Call this meeting periodically to discuss alfalfa, soybean, or clover crops, specialists, or others will discuss:
  - (a) Value of crop.
  - (b) Seed supply and varieties.
  - (c) Methods of handling the crop.
  - (d) Use and disposition of crop.
4. Plan with county agent or specialist meetings and demonstrations on plots or fields.
5. Secure exhibits for community or county fair.

### Cow Testing Associations

1. The banker can arrange with county agent or specialist from agricultural college for meeting of interested group of farmers in the community for the purpose of organizing a cow testing association.
2. Banker may act as leader, and with county agent or specialist plan to visit prospective farmers who may join the association.
3. Organize for work and assist in securing testing equipment and other materials whenever necessary.
4. Call meetings periodically to discuss association business and hold picnics or tours.
5. Banker with county agent or specialist may arrange for C. T. A. booth at community or county fair giving testing demonstrations and explaining work of association.

This constitutes the preliminary work by the college which paves the way for constructive work by the bankers in banker-farmer projects.

young calves on rape because of the danger of bloat and also because they pull up many of the plants, causing a great deal of waste. The best way to feed rape to cattle is to cut it and then feed it to prevent waste.

### Dairy Facts

Good care before a cow freshens is just as necessary as good care afterward.

Good prices for dairy products are practically assured for many years to come.

### Using Rape as Pasture for Cattle and Calves

Rape may be used as pasture for cattle but there is danger of bloat. This danger is not so prevalent at first because the animals usually have to acquire a taste for the plant before they will eat large amounts of it, but when they have become accustomed to it the danger of bloat is always present. Milk cows being pastured on rape are usually given a heavy feed of grain before being turned on the field so they will not eat so much of it. Plenty of salt should also be furnished animals that are feeding on rape. It would not be wise to pasture

# PUBLIC SALE

I will sell the following described property at public auction at my place on the Claus Eichner farm, 5 1-2 miles north of Kendrick on American ridge, commencing at 10 o'clock on

## Friday, October 16

### HORSES

- Grey horse, weight 1450
- Bay horse, weight 1425

## Powerful--Selective Yet Sweet in Tone

Distance aplenty with a DeForest Set, and at the same time you can enjoy to the utmost the clear, sweet tones which come in without harshness or distortion. We would like to demonstrate it for you.

\$90.00 and up.

The Red Cross Pharmacy

R. D. Newton, Prop.

The baby calf should be kept isolated for at least ten days in a perfectly clean stall with an abundance of good clean bedding, after which time it may be placed with other calves.

As the dairy grows a market may be found for selling sweet cream or milk to a nearby city.

The heifer twinned with a bull is called a "free martin" and almost invariably sterile, but the bull is fertile. Twin heifers and twin bulls are also fertile.

A cow may get sufficient feed in pounds, but if it does not contain sufficient digestible nutrients it will not maintain the flow of milk and keep the cow's body in good condition.

### Sprays for Flies Ought to Be Applied in Summer

The cost of spraying a herd of ten cows for a 90-day period during the fly season is approximately \$2 when either of the following sprays is used, according to the entomology department, Purdue university.

- |                                |               |
|--------------------------------|---------------|
| Spray No. 1:                   |               |
| Chlorozone (a stock dip) ..... | 1/2 gallon    |
| Oil of tar .....               | 2 gallons     |
| Kerosene .....                 | 2 1/2 gallons |
| Spray No. 2:                   |               |
| Fish oil .....                 | 2 quarts      |
| Oil of tar .....               | 1 quart       |
| Crude carbolic acid .....      | 3-5 ounce     |

These sprays were used in a test during the fly season of 1924, on several Indiana dairy herds. The con-

clusions at the end of the test indicated that the sprays should be applied faithfully throughout the fly season. Where only one application was made a day, it was found that spraying immediately after the morning milking gave the best results. It should be applied to every part of the body, including the legs and under parts, as a fine spray. An odorous spray proved to be more effective than the odorless mixtures. The cows that were sprayed were markedly quieter, less nervous, grazed more peacefully, and stood quieter at milking than unsprayed cows. Herds that were sprayed showed a diminishing number of flies as the season advanced.

### Crown of Alfalfa Plants Is Close to the Ground

Young alfalfa plants have a sort of a crown close to the top of the ground. A horse or a sheep will bite off the young plants below the crown during the first fall and winter and kill the plants. Cattle do not crop so close to the ground but they do eat the tops that should be left there every winter for protection and to hold the snow. Alfalfa stays green under the snow all winter, not very green, but still there is some color near the ground on every crown. A few warm days and the green shows more and then it dies back slightly with the next cold snap. If the stock are even allowed to run over the alfalfa field when the weather is cold they will break off the tops of the plants and kill quite a percentage of all the plants they touch. Fence is cheaper than reseeding alfalfa.

### Lord Byron and the Eagle

The last bird I ever fired at was an eagle on the shore of the Gulf of Lepanto, near Yostiza. It was only wounded, and I tried to save it, the eye was so bright, but it pined and died in a few days; and I never did since, and never will attempt the death of another bird.—Journal of Lord Byron.

### Cold Water for Mahogany

A brilliant luster can be given to mahogany bedsteads by wiping them over with a cloth wrung out of cold water and rubbing to a high polish with a dry cloth. The rubbing should be continued till the polish comes back to the wood, and you will be delighted with the result.

### To Have Success With Fruit Farm

#### In Cultivating It Is Necessary to Plant and Turn Under Cover Crops.

To have success with the fruit farm, the bearing trees need to be cultivated; but, since continuous cultivation burns out the vegetable matter in the soil, it is necessary to plant and turn under cover crops.

"In the profitable upkeep and management of an orchard, cultivation and cover crops have not yet received the attention which they deserve," says C. D. Matthews, professor of horticulture at the North Carolina State college. "These two practices should not be considered separately, but should go hand in hand, as the value of one is dependent upon the other."

**Advantages of Cultivation.** "Cultivation in itself will improve the physical condition of the soil, save moisture needed by the trees, and will encourage chemical activities in the soil. These results are secured by increasing the water-holding capacity of the soil, by checking evaporation, by destroying weeds, and by hastening the decomposition of organic matter. It must be remembered that on all soils the moisture problem is important, and this year especially has it become a limiting factor. Growth of trees and size of fruit have been reduced by lack of moisture because of poor cultivation. The apparent failure to get results from fertilizers in some orchards this year can be traced to the low moisture supply as result of poor cultivation."

Professor Matthews states that most fruit growers know that cultivation

helps to conserve moisture, yet it is a proven fact that continued cultivation burns out much humus; therefore, clean cultivation year after year without the addition of humus in some form, is ruinous. Maintaining and increasing the supply of humus can best be accomplished by using green manure crops such as cowpeas, soy beans, rye and clovers. These all have advantages and each may be used where the condition of the soil and climate may dictate.

**Soy Beans Help.** In the lower Piedmont, sandhills and coastal plains, satisfactory results can be secured by planting soy beans as a green manuring crop between the trees. Success with the soy beans will depend on moisture conditions. However, if moisture conditions become favorable, Professor Matthews states that it will pay orchardists to plant soy beans. Several varieties may be used profitably, he states, but the Laredo will prove best if planted at the rate of fifteen pounds per acre. At this late date it is probable that soy beans will be the best crop to use in increasing the humus supply in the orchards. In September, crimson clover or a combination of hairy vetch and Abruzzi rye is recommended.

#### Garden Stuff for Table Use Every Day in Year

It is not as difficult as it may seem, to have garden stuff for table use every day in the year if desired. It can be done simply by raising plenty of vegetables for table needs during the growing season and a surplus to can and store for winter use. A hotbed or cold frame will help out wonderfully in maintaining a supply of vegetables during the late fall and early spring, more especially the latter. Fresh vegetables, newly gathered from the garden or hotbed, crisp and

firm, are far superior to those secured from any other source, being free from the tough, bitter qualities that mark vegetables too long gathered from soil.

For the greatest success in gardening the garden plot should be favorably located, that is, it should be well drained, sloping preferably to the south, the soil should be fertile and supplied with plenty of humus to retain moisture. To secure this humus the garden should be heavily manured every season. The soil should be plowed deep and a thorough tillage of crops practiced in order to keep the soil loose and in good growing condition, also to prevent and destroy weeds. If seeds are bought, secure the best possible. It is a commendable idea and one that requires little trouble in carrying out, to save the seeds from the best plants every season for future use.

#### Ground Barley Is Equal to Corn for Steer Feed

Ground barley proved almost equal to corn when fed with alfalfa hay to two-year-old steers at the Idaho station in experiments last year. The steers were fed all the alfalfa hay they would eat and were given about ten pounds of grain per head each day. Both grains were fed ground. Both lots gained about 1.8 pounds per head daily and required a little more than 1,300 pounds of hay for each hundred pounds of gain. The steers fed barley consumed 541 pounds for every 100 pounds of gain and the corn-fed steers ate 525 pounds of grain for each hundredweight of gain. Both lots of steers brought the same price when sold.

Another lot of steers were fed about 20 pounds of alfalfa hay, 14 pounds of corn silage and 9 pounds of ground barley as a daily ration. Gains were cheapened about a dollar per hundred

pounds through the use of the silage. The steers gained 2.1 pounds daily. For every 100 pounds of gain they required 938 pounds of hay, 678 pounds of silage and 429 pounds of barley.

Successful dairymen insist upon a treatment of the cow which will insure health, comfort, and continuous work.

If the milk is kept clean and away from any unusual odors which it will readily absorb it should retain the natural flavor.

**To Clean Painted Walls** Painted walls may be cleaned with very hot water. Clean only a small space at a time and in straight lines. Yellow soaps are too strong and may change the color. Calcimine walls may be washed or wiped

Another "Bull" Durham advertisement by Will Rogers, Ziegfeld follies and screen star, and leading American humorist. More coming. Watch for them.

## Improving on History

I just finished hearing a Politician, one of the Washington Boys, talk on Abraham Lincoln. The only thing I could picture in commiseration between him and Lincoln was that they had both been in Washington. When a Politician ain't talking about himself he is talking about Lincoln. Lincoln has had more Public men speak of his good qualities, and fewer copy any of them, than any man America ever produced. His famous address was only about two hundred words long. No Politician has ever been able to even copy his briefness. In fact that is the last one of his qualities that they would try to copy. Lincoln said more in those 200 words than has been said in the entire City of Washington in the last 10 years, and here is a quality that no historian or speaker has ever brought out before. At the completion of the Gettysburg speech, he wisely refused one of Grant's Cigars, and borrowed a sack of "Bull" Durham from an Ex Southern private, rolled his own, got on his Mule and went back to Washington.

**Five Excellent Reasons for Standard Bred Hens**  
Here are five reasons for keeping standard-bred poultry:  
More uniform in size, type and color.  
More attractive in appearance and appeals more strongly to purchasers of stock and eggs.  
Offer a greater combination of practical and useful qualities suitable to the needs of the farmer and poultry keeper.  
The products of standard-bred fowls are more uniform in quality, are in greater demand, and bring better prices.  
Standard-bred poultry means greater success and better profits.

**Average Production of Hens in Ordinary Flock**  
A flock of hens that averages 100 eggs a year per hen is a good flock. Here is the number of eggs per hen such a flock should average in each month:

November	8 EGGS
December	10 EGGS
January	10 EGGS
February	10 EGGS
March	12 EGGS
April	21 EGGS
May	20 EGGS
June	18 EGGS
July	16 EGGS
August	13 EGGS
September	7 EGGS
October	6 EGGS

---

**Dairy Facts**

Silage is a summer feed the year round.

Good cows are kept; poor cows maintained.

No farmer ever made anything running a poorhouse for cows.

Breeders differ as to the breeding powers of the bull when silage is fed. Silage fed in large amounts will have a tendency to distend the paunch, which is very undesirable.

The cow must be fed liberally so that she will have the raw materials to maintain her bodily health and strength and produce large quantities of rich milk besides.

**To Brighten Brass**  
Brass fixtures which are constantly being used will keep bright for weeks if lightly smeared over with vaseline just after cleaning. Steel on gas stoves may also be treated in this way, so that when water is spilled it will run off the steel and will not rust.

## FARM POULTRY

### ERADICATE MITES TO SAVE POULTRY

There are few poultry producers who do not know of the ravages caused by the common chicken mite. It is very common in all parts of the country and while it is more prevalent in mid-summer it is well to eradicate it from the chicken houses before the young chickens arrive in the spring.

The removal of all interior fixtures and a thorough disinfection with a strong dip applied with a force pump is recommended by the Kansas experiment station. They state:

All rubbish should be removed and burned. Care must be taken to get the spray into all crevices. Kerosene emulsion, crude petroleum, and wood preservatives may be used for spraying, followed by whitewash. Whitewash aids mechanically by helping to fill up many crevices. Spraying should be repeated after a week in order to get any mites that may escape. Roosts should be painted frequently with wood preservative or crude petroleum. A treatment of the roosts, nests, boxes, etc., each spring with undiluted crude carbolic acid or sheep dip is usually sufficient to reduce the action of the mites to a minimum. The fact should be kept in mind that mites are blood-sucking parasites and do not remain on the birds as do lice. Mites are more harmful to poultry than lice and in treatment it is necessary to treat the house and not the bird, as is the case of lice.

The construction of roosts and nesting places so as to reduce hiding places to a minimum is an excellent control measure.

If new birds are brought to the farm, or birds to new quarters, they should be isolated for a few days in a pen separate from the permanent quarters so that all of the mites will leave them, thus preventing the infestation of new quarters. If birds are moved in the daytime mites will not be carried on them.

**Poultrymen Use Greens in Greater Quantities**  
New Jersey poultrymen are finding that for greatest success plans should be made to supply poultry with an abundance of greens. They find that vegetation usually becomes tough and coarse in the summer and free range conditions do not provide the proper type of green food for poultry.

To offset this the principal crops sown in yards or on range are oats, rape and alfalfa. An alfalfa sod makes an ideal range because of the new growth constantly coming out. Rape also makes a new growth as the old is eaten off. It produces dark yellow yolks, however, and must be avoided if light yolks are desired. Oats make a very good crop for a few weeks. They should be planted in small quantities, because if not consumed while young they soon become too large and coarse.

In addition to range crops, cabbage, kale and swiss chard are often grown in a side field and fed to the birds. Kale has proved particularly well suited for summer feeding as it continually sends out new shoots after being cut. Cabbage makes a fine feed for late summer and fall.

Regardless of the kind of succulent feed used, successful poultrymen aim to provide six to eight pounds daily per 100 birds. When fed the first thing in the morning or the last thing at night, the green-feed does not interfere with consumption of other feeds, and egg production is improved by its use.

---

**Poultry Facts**

A Leghorn cockerel may become a rooster, but never a rouser.

Painting the roosts and nests with a good preservative or creosote is insurance against mites.

It is a good rule never to let a sick chicken die on the premises. It should be killed before it reaches that stage.

If you are expecting to get the best results from your poultry flock, feed a balanced ration and do not over-feed.

The ancient buncombe about hens getting too fat to lay is still widely credited when, as a matter of fact, no hen except a fat hen can lay.

A full feed early in the day tends to make the hens listless, while a small feed encourages them to take the exercise which they need in order to keep in the best of health.

A hoe with 15 or 18-inch blade is very satisfactory for scraping the dropping boards, and if used regularly once a week or oftener, will assist materially in maintaining the health of the flock.

A good scratch grain ration consists of equal parts of cracked corn and whole wheat. Feed a little of the grain in the morning to make the flock exercise and give all they will clean up at night in fifteen or twenty minutes.

## DAIRY FACTS

### DORMANT PERIOD IS CRITICAL FOR COWS

Of course it is desirable to make certain modifications in rations for dairy cows that are to be fed during lactation as well as during the dry period. A milking ration must necessarily carry more protein than a maintenance ration. In too many instances dairymen feel that since the cow is not producing milk, she can survive on coarse roughages that are not supplemented with the usual grain allowance. This is a common error and a serious one.

If I were to judge the critical period, as far as nutrition is concerned, as it occurs in a dairy cow's cycle, I should say that the care and attention to the feed that is supplied during her dormant period is even more important than the selection of that given her while she is in milk, says a writer in the Rural New Yorker. If the cow is in good condition, then a ration consisting of 30 pounds cornmeal, 30 pounds ground oats, 30 pounds bran, 10 pounds linseed meal, makes an excellent winter dry ration. During the summer months, the linseed meal might properly be replaced with gluten feed or gluten meal. You understand, of course, that you feed about twice as much gluten feed as you do gluten meal in order to bring about an equal amount of protein. The 3½ pounds of grain that you are feeding twice daily is quite sufficient during her lactation period, provided this will carry from 20 to 25 per cent of protein.

A ration consisting of equal parts of bran, cornmeal, gluten feed, and oilmeal would be rather concentrated, although it would carry about 20 per cent of protein. The addition of some ground oats to this combination would provide bulk and bring it more nearly into balance, especially for summer feeding. Neither millet hay nor the mixed hay you describe is suitable for milk production and it might be to your advantage to replace this roughage with alfalfa or clover hay, or at least mixed hay carrying some clover.

Let her have all of the corn fodder that she will clean up with relish. In fact, under the individual rearing system it is almost immaterial how and when the roughage is supplied. In the absence of some succulent feed such as cow peas, turnips, or small potatoes, or similar home-grown garden products, I should feed some moistened beet pulp. The candy pail serves as a vehicle in this instance, wherein four or five pounds of dry beet pulp is moistened for 12 hours before feeding and given the animal in two equal quantities, morning and night. This succulent feed is a carbohydrate carrier, is very palatable, and when fed in conjunction with grain ration mentioned above, when the cow is in milk, results in an increased daily production.

**Venerated by Hindus**

The Vedas are the sacred writings of the Hindus, hymns, prayers and liturgies said to have been compiled by Vyasa about 1200 B. C. They were written in Sanskrit and divided into four parts.

**Too Many Knocking**

The reason some people don't hear opportunity knocking is because they are at it themselves.

Two Scotsmen were taking a walk, and were hot and tired.  
"Hae ye got any food wi' ye, Dougal?" asked one.  
"A've a bottle of whusky. What hae you, Angus?"  
"Dried tongue."  
"Guid! Then we'll gae halves wi' oor proovessions."  
The whisky was duly divided and drunk. Angus wiped his lips. "Noo for yer dried tongue, Dougal."  
"Mon, said Dougal, it's no dry the noo!"—Ex.

**GLEANINGS**

Byron Tupper of Clarkston, a former resident of Potlatch ridge was transacting business in Kendrick last Friday.

Mr. and Mrs. Byard Davidson of Colton, Wash., were Kendrick visitors last Friday.

Mrs. Harold Thomas and daughter, Phyllis, went to Lewiston last Saturday to spend the week-end with Mrs. Thomas' parents, Mr. and Mrs. J. W. Phillips.

Mr. and Mrs. G. G. Oldfield and Miss May Seals of Pullman were guests at the home of Mr. and Mrs. Joday Long last Sunday.

Hon. Frank L. Moore of Moscow was a Kendrick visitor last Saturday morning.

Mr. and Mrs. F. Byron Smith and family of Peck, drove over Sunday to visit friends in Kendrick.

Mr. and Mrs. J. D. Stanton of Nez Perce spent the week end with relatives here.

Mr. and Mrs. John F. Waide and family of Deary spent Sunday in Kendrick with relatives. Mr. Waide said that he was anxious to see a good grade over Bear Ridge to connect with the state highway at Deary. He believes it will turn an immense amount of tourist traffic through this way.

Guests at the home of Mr. and Mrs. Frank Ellis last Sunday were: Mr. and Mrs. Herman Koepf, Mr. and Mrs. T. H. Daugherty and Mr. and Mrs. Lyle Harrison and family.

Mr. and Mrs. Edwin Smith of Spokane arrived last Sunday to visit at the home of Mr. and Mrs. H. P. Hull. Mrs. Smith is Mrs. Hull's sister.

A big crowd attended the Legion dance here last Friday evening. There was hardly room on the floor for those who wished to dance, but everyone reports a fine time.

If W. T. Wright continues the good work that he has started he will make a decided improvement in the west end of town. He bought an old house last spring, remodeled it and now has a very neat residence. He recently bought the old house with the high stone foundation, a place that has been vacant for years because it was so badly in need of repairs. He is making substantial improvements to the building and will have quite a desirable place when it is finished.

George Davidson, Wade Keene, Walter Bigham and Byard Davidson are leaving this week for a big elk hunt in the Selway country. They will drive by auto as far as the falls on the Selway river and from there will hire packers to go with them up the trail.

George Barnum delivered the lumber the first of the week for the construction of a camp for the road construction crew in charge of the road work on the project from Arrow Junction to the Latah county line. Work will be started on the construction of the camp immediately.

Jim Cain of American ridge is advertising a public sale to be held next Friday, October 16, at his place on American Ridge, 5 1-2 miles north of Kendrick. Jim is going to quit farming and will move to northern Washington this fall.

C. B. Candler, who for a number of years has been an invalid here, was taken to Moscow, yesterday afternoon where he will be under the care of a county nurse.

Mr. and Mrs. Will F. Morgaridge of Moscow were Kendrick visitors last Tuesday. Mrs. Morgaridge, who is president of the Rebekah Assembly, visited the Kendrick Rebekah lodge Tuesday evening.

Frank Chamberlain made a business trip to Princeton the first of the week.

According to figures given out by the registrar of the University of Idaho, the enrollment this year has reached 1744, which is an increase of practically 5 per cent over similar totals last year.

Mr. and Mrs. P. I. Orcutt were Kendrick visitors Wednesday morning. Mr. Orcutt was formerly a

prominent newspaper writer of North Idaho but is now field agent for the Real Silk Hosiery Co., a more lucrative occupation but not half so much fun as running a newspaper.

Arnold Behrens, cashier of the Bank of Juliaetta, was transacting business in Kendrick, Wednesday.

The Idaho-W. S. C. game will be played at Pullman, Saturday, October 17.

A family reunion was held at the home of Mrs. E. E. Bechtol at Moscow to celebrate the birthday of her mother, Mrs. M. A. Deobald. The families of Otto Schupfer and Wm. Deobald attended from here and Mr. and Mrs. Roy Thompson of Craigmont were also present.

Mr. Westover of Clarkston, who owns a ranch on Bear creek, was transacting business in Kendrick yesterday.

Born to Mr. and Mrs. Halliday, September 29, a daughter.

Prof. A. O. Strauch will talk on "The Barometer" at the regular meeting of the local Oddfellows lodge tomorrow night. A large crowd is expected to attend.

Ben Shay is improving his little bungalow in the west end of town by covering it with a coat of shingles. It makes a decided improvement in its appearance. All of these little improvements in town property go a long way toward giving the town a pleasing appearance.

**Notice To Bandsmen**

On account of the ministerial meeting to be held in Kendrick next week, there will be no band practice Monday night. The practice night has been changed from Monday to Tuesday night of each week. The next rehearsal will be held on Tuesday night, October 20.

**BIG BEAR RIDGE**

Mrs. Glayton Mowrey of lone, Wash., is visiting at the home of her parents, Mr. and Mrs. J. J. Slind.

Misses Opal and Dorothy Jones and Ida Morey, who are attending the Lewiston State Normal, spent the week end at home.

The Ladies Guild invite you all to attend their annual fancy work sale at the Community hall, Saturday evening, October 10th, at 8 o'clock. Following this supper will be served. The proceeds from all will go toward the Wild Rose cemetery fund. Your presence and help will be greatly appreciated.

Preaching services at the Lutheran church, Sunday, October 11th at 10:30 a. m.

Mr. and Mrs. John Halseth and little daughter, Marjorie, of Deary were Sunday visitors at the Fred Bailey home.

Mr. and Mrs. Newt Heath and children and Herman Hecht motored to Moscow and Genesee, Sunday.

Emert Lien came down from Murray, Idaho, last week for a visit with his parents, Mr. and Mrs. Ole Lien.

Albert Nelson spent last week with his sister in Colton, Wash.

Henry Jones of Elk River was in town Sunday, for a short visit with his parents, Mr. and Mrs. George Jones.

**SOUTH'S BEST BABY**

Baby Charles M. Lamm, Jr., southern prize winner and 100 per cent perfect, is the son of Mr. and Mrs. C. M. Lamm of Wilson, N. C., and Richmond, Va. The baby, although but nine months of age, has been declared by physicians to be better developed than the average child of a year old. He has nine teeth, walks, and speaks one-syllable words distinctly.

**Somewhat Excited**

"You say Jones got all excited when he saw his wife coming?"  
"Excited! He reminded one of somebody running around looking for a fire-escape in hades."

**Good Pasture Helps Out Cost of Producing Milk**

Lower prices for dairy products now prevailing makes it all the more necessary to reduce the cost of production.

Feed cost in most cases is the biggest single factor influencing cost of milk production, and one problem before the dairyman at this season of the year is how best to keep his cows producing heavily throughout the summer months at the lowest cost.

A pasture which is both luxuriant in growth and also of value during the late summer and early fall months is the logical solution of this problem.

Good pasture during the spring, summer and fall months prevents the necessity of feeding hay in the lot, and the hauling of that hay. It eliminates the problem of hauling manure at a time of the year when most dairymen are busiest and it provides, with the addition of a small grain ration, a succulent balanced food resulting in heavy production at a very low cost.

Pasture mixtures, such as are suggested by the Colorado state dairy commissioner, based on his 14 years of experimental work will, when permanently established, cut down the cost of summer feeding and labor expense, and keep the cows producing well during the hot months.

A letter asking for this information may save many a dollar otherwise spent for feed.—H. R. Lascelles, Fieldman, State Dairy Commissioner.

**Farm Hints**

Spray or dust potatoes; it pays.

Mow the pastures to destroy the weeds.

The only excuse for cultivating corn is to kill the weeds.

Be sure to plant plenty of soy beans for seed, hay and soil improvement.

Good paint will prevent a multitude of evils; bad paint will commit them.

Remember that grass and weeds are easier to kill when young. Cultivate crops frequently.

It has been said that there is no gain without a loss. In other words, gain alfalfa and lose despair.

**Famous Lighthouse**

A well-known lighthouse is located on the Eddystone rocks, which are a particularly dangerous reef lying in the English channel about 14 miles from Plymouth, England. This is considered the first of the modern lighthouses.
