

Making Plans For the Big Mill

Clearwater Timber Co. is Locating Buildings

The Clearwater Timber company is now engaged in the preparation of the plans for the milling plant to be located east of the city and all that is new in milling machinery and equipment will be secured for the new mill, says the Lewiston Tribune. The actual preparation of the plans is in the hands of Fred Hortkotte, who has prepared the larger percent of the plans for the big plants in the northwest for the past several years. It was stated yesterday by Philip Weyerhaeuser, vice-president and general manager, that the plans now at hand are only preliminary and while they show the location of buildings in a general way, there will be some changes and the planning for the machinery and equipment is just beginning.

The forebay will contain about 230 acres and will extend from the head of the Porter island to a point a little east of the east line of the fair grounds property. The minimum depth of the forebay will be five feet and the improvements incident to the actual milling operations will be commenced at a point about 8-500 feet above the milling plant. Here the company will install a sorting pen in the river to handle the logs brought down by the river. It was stated that sheer booms will be placed at points along the river to keep the logs away from shallows and sloughs.

The milling plant will be located adjacent to the railroad track and directly east of the fair grounds property on land secured from Pascal Speno. The mill dimensions will be 150 by 412 feet and will be equipped with four double cutting band saws, one master gang, edgers and trimmers. All of the primary cutting machinery will be located in this building and the lumber will pass directly from this plant to the yards or the dry kilns.

The fuel building and the power plant will be located convenient to the milling plant and directly to the north and the present plans provide for an overhead one-rail conveyor to serve the yards, dry kilns and other features of the plant. Chain sorters and auto stackers will handle the lumber into the dry kilns.

The matter of locating the dry kilns, the planing mill, box factory, dry sheds and other buildings has not been fully determined. At the present time the plans provide for the dry kilns to be located immediately south of the slough and near the east line of the fair grounds property. The planing mill, box factory and some of the storage buildings are located on the north side of the slough. It is possible that all buildings may be located between the railroad and the slough, which would mean the larger percent of the yard area will be transferred to the north side of the present slough which will be converted into the tail race for the power plant.

The present slough will be widened and deepened from the power plant which will be located near where the east line of the fair grounds property crosses the present slough. The slough will be extended directly west to the Clearwater river from the point where it turns south to the railroad track near the northwest corner of the fair grounds property. The slough leading from this point to the railroad track and the hole near the auto camp grounds will be filled so that all water from the forebay will be handled through the tail race.

Mr. Weyerhaeuser stated yesterday the work of preparing the detail of the plans is going for-

Whetstine-Robbins

Mrs. Jennie Olive Whetstine of Kendrick was united in marriage Saturday, at Moscow, to Mr. Andrew Robbins of Leland. The ceremony was performed by Judge Adrain Nelson at the Court House in the presence of Mrs. Leah Bigham of Kendrick and Mr. Curtis Cox of Leland. After a honeymoon trip to the coast the happy couple will make their home on the groom's place near Leland.

Town Council Bought Rock

Surface Alleys and Parts of Main Street

At a meeting of the town council, held this week, a contract was signed with Contractor E. M. Booth for 600 yards crushed rock, 200 yards of which will be used to surface three blocks of the alley from the Kendrick Garage to the Kendrick Rochdale warehouse and the alley from the Kendrick State Bank to the Fraternal Temple building. The side street at the Temple and also at the Kendrick State Bank will be surfaced. The rock for the alleys will be put through a one inch screen.

Mr. Booth has agreed to leave the crusher set up at the present quarry below Juliaetta, until January 1. This will give the commissioners of Latah county an opportunity to fulfill their obligation to surface the strip of road between Kendrick and Juliaetta, as the January taxes will be available at that time.

The members of the town council are to be commended for their progressive spirit in making this substantial improvement to the town. The cost of the crushed rock will be met from the general fund of the town treasury, their being sufficient money on hand to meet this expense.

Mr. Booth made the town an extremely low price on this rock. It will be delivered and spread on the street at an average price of \$2.25 per yard.

Genesee Store Robbed

Approximately \$100 worth of dry goods was stolen from the Follett Brothers' merchandise store at Genesee, Monday night when the store was broken into and robbed, according to word received at the Latah county sheriff's office, Tuesday morning. No clue as to the identity of the robbers was found in an investigation conducted Tuesday morning nor no trace of where the goods were taken, according to Sheriff Charles Summerfield.

August Hartung returned Sunday evening from Spokane, where he spent the week end with friends and took in the Northwest Indian Congress, which was held there Friday and Saturday.

ward as rapidly as possible and that the building of the plant will be under way as soon after the first of the year as preparation of the plans will permit.

There will be trackage constructed from a point near the railroad yards to the storage yards to the north of the tail race and boats will be provided to handle the logs in the forebay. The pole yard will be located to the north of the tail race and there will be gates into the tail race and near the dam site which will permit logs and debris to be passed from the forebay to the main river below.

The officers of the Clearwater Timber company now occupy the second floor of the Breier block, the lease taking over the larger part of this floor. There will be extensive changes in the arrangement and the installation of a vault, plans for which will be announced by Mr. Breier within the next few days.

Caillaux Honors Unknown Soldier

French Finance Minister Caillaux laying a wreath on the tomb of the Unknown Soldier in Arlington National cemetery.

Hunting Party Returns

John L. Woody, Dr. J. T. Moser and Ralph Knepper returned Wednesday morning from a hunting trip in the Selway forest, after an absence of nearly two weeks. Dr. Moser captured the honors of the hunt, securing a fine elk, while each member of the party shot a mule deer.

From Kooskia forty miles was covered by truck and from there a string of pack mules carried the outfit four days travel up the Selway river to the Bear creek country. It is a beautiful trip and gives one a fair idea of the vast forest that still exists in Idaho.

The packer who took the party in said that a point near Moose creek is 70 miles from either Darby, Montana or Kooskia, Idaho. It is said to be farther from a town than any other point in the United States. But though the country is still in its primitive state, phone lines run to nearly all parts of this mountain country, placed there by the forest service.

The trip disclosed the fact that Dr. Moser can make hot cakes that are tougher than the hide of a bull elk. John Woody baked biscuits that would withstand the penetration of a high powered rifle—and ye editor ate untold quantities of the product of their culinary art without any particular discomfort.

Fruit Damage at Clarkston

The heavy winds which prevailed last Saturday night, was rather disastrous to the apple orchards where much of the fruit was yet to be harvested, by blowing it off. Sargent & Florence, who have a large orchard on Clarkston Heights, were rather heavy losers. They have a crop of about sixteen thousand boxes this year, all excellent fruit, and naturally much of it is yet to be gathered. Those apples blown off Saturday will not do for shipment, but will have to be sold at a lower price, by the sack. While the fruit is all of a very high quality this year, there is also a good market.

Get Switch Engine

Orofino, Nov. 2.—With the arrival tonight of a four-wheel drive locomotive for Twohy Brothers to be used at this point for switching of equipment cars, and later for handling work trains, the development at this point is taking on the form of gigantic operations. It has become impossible for the local freight trains to handle the work at this point, the cars of equipment and supplies have become so numerous.

Today's allotment of supplies included seven cars of powder.

B. F. Shay went to Lewiston Monday afternoon to spend a few days with friends.

Arrested For Forgery

A young man who has been going under the name of Lyle and who has been working in this vicinity for several months, passed a hot check at N. B. Long & Sons store, Tuesday evening. The check was made out to Henry Went and was signed Archie May. The check was for \$15 and was cashed by the firm.

Members of the firm who saw the check became suspicious and called Mr. May who stated he had written no such check. Marshal Gardner was notified and traced the man on the road Northeast of town. He was placed under arrest and consigned to jail and now faces a forgery trial. It is said he has a wife and two children. He is about 23 years of age.

Closing Out Business

James Pettet, who for the past six months has been conducting a very successful furniture business here, is closing out his stock on account of ill health. Mr. Pettet expects to leave soon for Rochester, Minn., where he will undergo a serious operation from which he will probably not fully recover for the period of a year or more.

Mr. Pettet was very reluctant to dispose of his business here as he was doing well, but the condition of his health would not permit him to continue longer. He has made many friends here during his brief residence in Kendrick and they will all regret to have him leave.

Ankle Agony The Result

According to statements made by prominent physicians throughout United States, Canada and England, the young women of today are suffering from "Ankle Agony", due to short skirts, thin hosiery and damp weather. To prevent such inflammations, the physicians are recommending woolen stockings and longer skirts.

Record Spud Picker

What is believed to be a world's record pick of potatoes was made at Aberdeen, Idaho, Saturday when Valentine Solosabel picked 223 sacks of Russet potatoes in a few minutes less than nine hours, handling his own sacks and even carrying them from the field. The record is all the more remarkable when it is considered that a good average day's work is the picking and stacking of 100 sacks. The feat was performed on the farm of John L. Toevs, a recent graduate of agriculture at the University of Idaho, who farms one-half mile west of Aberdeen. Solosabel is paid at the rate of 8 cents per sack making his wage earning \$17.84 for that day. The 20-acre field of potatoes on the Toevs ranch are averaging 300 sacks per acre.

Dies From Auto Injuries

Word was received by Eben Adams of Juliaetta Monday, stating that his father, Abram Adams who was visiting his brother C. H. Adams at Tampa, Florida, passed away at 12:30 Monday noon from injuries received in an auto accident. The message did not state whether or not Mr. Adams was in the automobile or was hit by one. The accident happened last Sunday evening. The body will be brought to Juliaetta for interment.

Latah County News Paragraphs

Items of interest Taken From Neighboring Papers

Last Thursday evening Mrs. Steelsmith met with an accident that is causing her much trouble. She stepped on a stick that broke, one end of it penetrating her leg for more than an inch. She was taken to Moscow for medical attention, and returned home Sunday. Blood poison developed later and she is again in Moscow for treatment. —Troy News.

The cannery closed its season run last Monday. Manager Dustin says they have canned more first grade tomatoes this year than any year since he has been in charge. All of the first tomatoes coming in being "first." After the rains came the tomatoes cracked and were much softer when canned.

He states that he has no trouble in selling his product as all brokers are very anxious to handle Juliaetta tomatoes, which sell readily to the consumer and command a higher price than any other tomato on account of their fine flavor, with which no other tomato on the market can compete. Each year the demand for this product is growing greater and he is anxious to get more growers interested in their production. —Juliaetta Record.

Children Found in Ditch

Pathetic little creatures, half starved for food and yearning for a mother's love—ragged, dirty and cold, five of them huddled together in a deep, damp irrigation ditch near Emmett, after the fashion of so many sheep endeavoring to keep warm in a blizzard, were discovered by the sheriff of Gem county during the past week and now are lodged in the Children's home at Boise. Their parents, apparently destitute, boasted as their sole possession a rickety rainshackle old touring car, which the family of seven called home and which had served them in crawling about the country wherever the father might find work. The mother? She's in jail now, and the father, when last heard of had set out to seek work in the vicinity of Boise. But the children—there are five. A girl of about 11, boy about 8 and three other girls ranging from 5 to about 3 years of age. Pitiful little creatures, mishandled by the world, victims of the whims of fate, and without the love, patience, comfort and even the bare common necessities of a place which they might call home. They like the Children's home. They're happy now and clean too. And, best of all, they have clean clothes and are eating regularly.

Koepp Buys Larson Ranch

A deal was closed last week by Amil Larson, well known farmer of the Leland section, whereby he sold 200 acres of land near Cameron to Carl Koepp, the consideration being \$11,200. There are 90 acres of plow land on the place and the balance being good pasture.

Road be Closed For Construction

No Traffic from Arrow to Juliaetta After Sunday

The Juliaetta road, from Arrow to the Latah county line, will be closed to traffic after Sunday, it was announced yesterday by Engineer C. C. Van Arsdol, speaking for the Lewiston highway district. This is made necessary by the use of a steam shovel on the narrow portions of the road north of Arrow.

Work on this sector of the Juliaetta highway has been under way for some time, but with the use of a steam shovel starting Monday it will be impossible to keep the road open. For several miles the road between Arrow and the Latah county line is very narrow and as the new grade follows the old road most of the way it will be necessarily closed during the time the steam shovel is being used.

It will be necessary for the road to be closed about six weeks or two month, Mr. Van Arsdol said. There is no way that this can be avoided and travel to Juliaetta and Kendrick will have to be routed through Genesee.

The Lewiston highway district is building the highway between Arrow Junction and the Latah county line and C. C. Van Arsdol, engineer for the highway district, is in charge of the construction. The entire improvement lies in the Clearwater highway district but on account of the district being without funds it was necessary for the Lewiston district to entirely finance the road improvement.

The road from Arrow Junction toward Lewiston to the west boundary of the Clearwater district, will also be improved during the winter. This improvement will extend from Arrow Junction to the end of the pavement, west of the Spalding bridge, and the financing will be provided by the federal government, the state and the Lewiston highway district. The completion of these two projects will provide a surfaced highway from Lewiston to Juliaetta and Kendrick and with extensive road improvements under way beyond Kendrick, the improved highways will be extended into the Deary and Bovill sections as well as onto the thickly settled ridges. The reports from Kendrick state the inauguration of a comprehensive road improvement program has awaited the actual inauguration of construction on the Arrow Junction-Latah county link but with this now well under way, the districts beyond Kendrick are anxious to vote the bonds to provide the road improvement to connect with the Kendrick system.

Masons to Entertain

Invitations are being sent out this week to the members of the Masonic Lodge and Eastern Star Lodge to attend a banquet and entertainment to be held at the Fraternal Temple, next Thursday evening. The banquet will take place at 6:30 in the banquet hall after which a special program will be rendered.

Clem-Albright

Miss Esther Clem, one of Kendrick's popular young ladies, was united in marriage, Saturday evening at five o'clock, at the Christian church of Lewiston, to Mr. Marvin L. Albright, a prosperous young farmer of the Juliaetta section. The ceremony was performed by the Rev. C. C. Roberts in the presence of two witnesses, Miss Cora Wilson of Kendrick and Mr. Julius Giese of Juliaetta. The happy couple will make their home on their ranch below Juliaetta.

GIVE HOME MERCHANTS A CHANCE

Communities grow only in proportion to the support they receive from the people who make up the community. Kendrick has no chance to improve in quality and size by the inhabitants investing their money or buying the necessities of life in other localities. People who cling to the misguided policy of "doing better" away from home often lose dollars in trying to save pennies.

The home merchant is honest and offers honest values. He can't afford to be otherwise, though he might be inclined to. He depends for his living from the community which he serves and he must give the community what it wants at a fair price.

When you are tempted to trade outside and buy something "just as good" at lower prices you should think twice before acting. If you are disappointed in merchandise bought at home, you can always get an adjustment. The merchant himself may have been cheated and he is generally willing to take the loss rather than have a dissatisfied customer. But the out of town merchant is not personally interested in you. His only hope is to sell you once and he does not have to take precautions to preserve your good will.

More than owing it to your community to trade at home, thus keeping your money in circulation at home you should give the home merchant the first opportunity to serve you, from a sound economic viewpoint.

BE THE TENTH ONE

Dear Subscriber: A few days ago we sent a letter to ten of our most valued readers, reminding them that their subscription was in arrears, and gently hinting that an early remittance would be appreciated.

Five of them promptly paid up. One replied that he would pay "next week"—but he died the following Saturday. Another said he would pay "the next time he saw us." He went blind. And yet another telephoned that he would run down and pay us "some time." He has the rheumatism now and can't even walk. The ninth said he would "see us in h—ll first." He got religion that night and will not be able to keep the appointment.

We have not heard from the tenth one yet, and the tenth one happens to be you. We have not taken your name off the list as it seemed "sorter" natural to see it there. We have been pretty good sports to leave it there all this time. Won't you be an equally good sport and see that it stays "put"? We are sure that you will. Let us hear from you. —Swiped.

Leand School Notes

The Hallowe'en program, given Saturday evening by the school was attended by a crowd of about 200 people, who seemed to enjoy the evening. The school house was well decorated with the usual Hallowe'en emblems, while jack-o-lanterns and tallow candles furnished the most of the light. In connection with the program there was held the school Fair, consisting of the largest and finest grains, vegetables and some fruit, as well as fancy work and curios. Of particular interest was the school display by the intermediate and primary rooms, showing maps, booklets, writing exercises and posters on various subjects, all made by the children. Professor Sibert, former principal of Leland and Professor Ware of the Moscow Junior high school acted as judges and awarded blue and red ribbons to the winners. From the display rooms the audience went to the basement where the Epworth League in cooperation with the school put on a carnival. This proved to be an interesting attraction for the

rest of the evening.

The weather man has made it necessary to keep the furnace going at all times during the past week. Wednesday morning Maragret Gertje reported an inch of snow at her home near Southwick, but she found none when she reached the school house in Leland.

The high school will be dismissed Friday afternoon to permit Mr. Calvert to attend the Principal's meeting at Lewiston, called for Friday and Saturday.

The boys of the school are practicing football and expect to have a game with some other school in the near future.

This week the teachers are busy giving tests and making out reports. The attendance this month in all rooms has been very good.

FOLKS—

Let me be a little kinder, let me be a little blinder to the faults of those about me; let me praise a little more; let me be when I am weary, just a little bit more cheery, let me serve a little better those that I am striving for. Let me be a little braver, when temptation bids me waver; let me strive a little more to be all that I should be, let me be a little meeker with the brother that is meeker, let me think more of my neighbor and little less of me.

LAUGHGRAMS

They say nothing is impossible. Well, try and get a flapper to go for a ride in a buggy.

Many a chap who thought he loved at first sight has been entirely cured when he took another look.

Women are funny creatures. Many of them who never eat breakfast insist on having a breakfast room. That's to eat dinner in. The other meals they take in the kitchen.

BIG BEAR RIDGE

Dewey Galloway came home from a Moscow hospital, Monday, and is recovering nicely from having blood poison in his knee.

The O. E. MacPherson and R. H. Ramey families were Sunday visitors at the N. E. Ware home.

Mr. and Mrs. Gabriel Forest entertained a number of relatives and friends at dinner, Sunday, it being their second wedding anniversary.

Evan Lien was a Moscow visitor last week.

T. H. Rognstad of Clarkston, Wash., spent the first of the week with friends here.

Misses Opal and Dorothy Jones, who are attending the Lewiston State Normal spent the week end at home.

Wittour Babcock, who is moving down from St. Maries has gone after his last load. He and his son, Cecil will spend the winter here with his mother, Mrs. Ida Cumbstock. His children, Glenn and Miss Ruth are attending school at College Place, Wash.

Miss Alta Moore moved to Kendrick last week to be with her sister, Miss Chamber, who is attending

high school there.

Mrs. Hartwick Nelson and children are spending the week with her sister, Mrs. H. Dalberg in Deary.

A delightful Hallowe'en party was given at the Taney school house, Saturday evening by Miss Lola Halsey and her pupils. The room was tastefully decorated throughout and being lighted by jack-o-lanterns, gave a most pleasing appearance. Fortune telling with various new and interesting games carried out the Hallowe'en spirit most successfully. A nice lunch consisting of pumpkin pie, doughnuts and coffee gave the finishing touches to a most enjoyable evening.

Preaching services at the Lutheran church, Sunday, November 8th at 3 p. m.

Feed for Calves Where

Milk Is Not Available

Where milk is not available for calves, give the following: Take 50 parts finely ground corn, 15 parts linseed oil meal, 15 parts finely ground rolled oats, 10 parts dried blood flour, 10 parts skim-milk powder, one-half part salt. Stir up with warm water at the rate of one pound of the meal mixture to about six pounds of water. Increase gradually as the whole milk is decreased, until at the time the calf is 50 days old it should be getting only the gruel. At this time one and one-half to two pounds of the meal mixed

with the water will constitute a day's feed. The total quantity of milk used is about 300 pounds; if less is fed the calves are likely to be unthrifty.

Better Dairy Practices to Increase Production

By increasing the average production of his cows about one-fourth, and at the same time reducing his production costs one-seventh, Arnold Graue of Jackson county, Minnesota, has increased the profit from his cows, above cost of feed and labor, more than 70 times.

He increased the production of his herd by culling out the poorer cows of his herd and replacing them with higher-producing heifers of his own breeding. He cut down on his production costs by installing an engine to run his cream separator and by building a milk house close to the barn, thus reducing the labor of handling his milk.

Ohio farm boys and girls, 24,505 strong, are enrolled in the 12 kinds of farm clubs sponsored by the agricultural college extension service of the Ohio State university in every county in the state.

Unrequited Service

Crowds of people are always saying "something must be done," and finally one or two thoughtful and courageous men do it, and they don't always get the "statues" they deserve.

WILL ROGERS

Another "Bull" Durham advertisement by Will Rogers, Zig-zag field folios and screen stars, and leading American humorist. More coming. Watch for them.

Who Won the War?

England and France, smoking ready made Cigarettes fought two and a half years and couldn't make the first down on Germany. Germany smoking old tow lines off Ships, Sawdust, Cabbage leaves, Horse Blankets, and second hand Gun Powder couldn't make the grade. But when Americans arrived with no equipment and no training, but plenty "Bull" Durham, and Nerve to burn it with, in Two weeks the French were trading Legion of Honor Medals for a sack of "Bull." One sack was worth two quarts of Iron Crosses. Englishmen have even been known to sacrifice their afternoon tea for a puff of "Bull" Durham. Even after the war an American private, occupying the Ruhr, went into a German Restaurant and asked for a glass of Milk. He couldn't make the Waiter understand so he drew the Picture of a Cow, and a Milk Pail. The Waiter immediately returned with a Bucket of Beer and a Sack of "Bull" Durham Tobacco. That Private was a better Artist than he thought he was.

Hall's Catarrh Medicine
Those who are in a "run down" condition will notice that Catarrh bothers them much more than when they are in good health. This fact proves that white Catarrh is a local disease, it is greatly influenced by constitutional conditions. HALL'S CATARRH MEDICINE consists of an Ointment which quickly Relieves by local application, and the Internal Medicine, a Tonic, which assists in Improving the General Health. Sold by druggists for over 40 Years. F. J. Cheney & Co., Toledo, Ohio.

DAIRY FACTS

NEED BETTER COWS FOR MILK SUPPLY

(Prepared by the United States Department of Agriculture.)

The number of dairy cows in the United States is increasing, as well as the number of people, but not at the same rate. In only two years out of the last six has the dairy-cow population increased in proportion to the increase in human population.

The United States Department of Agriculture has just completed a study of the utilization of milk, in which it is shown that slightly more than 1,000 pounds of milk per capita is used annually in one form or another. In other words, a grand total of 114,668,201,000 pounds of whole milk is utilized in this country by manufacturing it into various products, by feeding it to calves, or for household purposes. This amount was produced by 26,252,000 cows, an average production of 4,368 pounds of milk per cow.

During the last few years the increase in population has been around 1,500,000 people annually. This would mean that with cows no better than those we have at present the milk-cow population should increase at the rate of 375,000 a year to supply the necessary 1,000 pounds for each person—or one cow for every four people. It is also interesting to note that the per capita consumption of milk in 1924 was 14 pounds more than in the preceding year.

Since our average production is much too low, it is not wise to consider meeting the demand for increased supply by having more cows of the kind we now have, but it would be much better to meet the situation by breeding better cows. Not more cows but higher-producing cows are what is needed to keep pace with the increase in population.

Dairy Exposition Is of Importance to Dairymen

An annual event of nation-wide and vital interest to people in all walks of life is the National Dairy exposition. Dairy agriculture last year represented a farm value of two and one-half billion dollars and a manufactured and farm value of close to five billion dollars, according to the official government census report. This great dairy branch of agriculture is brought together every year in an industry exposition and in conventions for the purpose of review to mark progress and chart out work for further progress and development. The still greater value of this industry to commerce, industry and business is that the products of the cow provide essential food for the life and health of mankind.

This year the exposition will be held at Indianapolis, October 10th to 17th. This year's event promises to be one of the greatest and most representative gatherings in the history of the exposition, says W. E. Skinner, secretary and general manager. The United States government, state agricultural college, national and state farmers' and breeders' organizations and dairy products manufacturers cooperate with and participate in the conduct of this exposition with comprehensive exhibits and demonstrations. The prize-winning dairy cattle of leading breeds at leading state and regional fairs and live stock shows will be sent to compete for national honors.

Nearly 16,000 Enrolled for Better Live Stock

A total of 15,818 live stock owners throughout the country are enrolled in the "Better sires—better stock" campaign for the improvement of domestic animals, according to a summary of progress just issued by the bureau of animal industry, United States Department of Agriculture. The report, which is dated July 1, shows that 549,455 animals and 1,185,089 head of poultry are undergoing improvement by the systematic use of pure-bred sires.

During the period April 1 to June 30 outstanding progress in this work occurred in the following counties: Grayson, Va.; New Haven, Conn., and Shelby and Union counties, Ky. A total of 41 counties throughout the country have 100 or more live stock owners who are using pure-bred sires exclusively for all classes of live stock kept.

The campaign is progressing principally through the activity of county extension agents and progressive live stock owners. The United States Department of Agriculture keeps records of the work and also is prepared to furnish interested persons with information on animal breeding and the value of improved live stock.

Roughage for Holstein

Generally it is figured a cow can eat three pounds of silage and one of hay for each hundred pounds live weight. This is a safe rule to follow if the silage is of good quality and if the hay is a legume. But do not feed excessive amounts of silage as it is quite bulky. With silage and clover a Holstein will undoubtedly do quite well with a pound of grain for each three and a half to four pounds of milk. The composition of the grain ration will depend on feeds available.

Profitable to Use High Quality Seed

Difficult to Keep Various Strains From Crossing.

The farmer of today, knowing that his grain is graded at the elevator and that the higher it will grade the better the price, is paying more attention to the quality of his seed than ever before. He knows that he cannot produce high-grade grain from low-grade seed and is willing to pay the price.

One of the difficulties in raising pure seed is the fact that plants of the grass family, to which corn and the small grains belong, produce pollen so profusely that it is extremely difficult to keep the various strains from crossing. This is particularly noticeable in corn where two varieties of different coloring grow in adjoining fields. Cobs showing kernels of different color are common.

In order to keep strains pure they must be grown in fields widely separated from fields of other varieties. As hay fever sufferers know, this fertilizing dust from the grain plants is carried for great distances by the wind, making the pure seed grower's task a difficult one.

Pure bred seed naturally is higher in price than lower grades of seed but the product is correspondingly heavier and higher in grade. The grower of fine strains of grain seed usually plants his fields to smaller acreage than the grower of grain for the general market and must exercise much greater care to keep it from contact with other fields. He must surround these fields with some other crops that cannot in any way interfere in the pollination of the seed which he is growing to sell to the farmer who demands the best quality for his acres.

Plan for More Poultry and Production of Eggs

Should farmers plan to increase their poultry and egg production in the future?

The success of such a procedure is very doubtful, according to F. A. Gougler, director of the poultry and egg marketing department of the Illinois Agricultural association.

"Competition is becoming keen in this line," states Director Gougler, "and only efficient producers from now on will be able to make this business pay. I do not think that those producers of poultry who plan to expand their business or individuals who now expect to enter the poultry business should move cautiously.

"So far this year approximately 2,000,000 pounds more of dressed poultry have been shipped to the large consuming centers than the total receipts to August 1 of last year. To be added to this is the information that we now have 37,000,000 pounds of dressed poultry in cold storage as compared with 23,000,000 at this time last year, or an increase of 14,000,000 pounds. Thus we find a large carry-over facing us in the future.

"On considering the present egg marketing situation, we find that there is an increase of 116,000 more cases of eggs in cold storage than reported at this date last year and our export in eggs has decreased as much as 450,000 cases. The reduction in our egg export is partially due to the fact that European countries, who furnished an outlet for our surplus poultry products in the past, are now getting to the point in production where they can supply their own needs.

"Reports from Midwestern states indicate an increase in production

this year resulting from the favorable spring season and it is doubtful if the consumption of poultry and eggs will show any great increase in the future."

Feed for Dry Cow

After the cow is dry, the feed should depend largely upon her condition. If she is poor in flesh the feed should be abundant enough so that she will be in reasonably good flesh at the time of calving. If she is in fairly good flesh then little more than a maintenance ration is necessary. If good pasture is available it will be all that is necessary for dry cows. However, if the pastures are poor some additional roughage should be supplied.

FARM NOTES

Treat seed wheat with copper carbonate for smut prevention.

Sanitation is the best safeguard against hog cholera. Clean up the filth in the hog lot.

In horse measurements, three inches equals a palm, four inches a hand, and six inches a span.

It is claimed that the lower the curl in the horse's forehead, the better is his disposition.

Asparagus tops should be cut off and burned. Mark any bare places in the bed so that new roots may be set next spring.

Rhubarb should be well mulched with manure to insure protection through the winter and to provide fertile ground for next year's crop.

Waste apples may be fed to the hogs, and they help out in balancing the heavy corn ration for early fattening. In this way, their value is much greater than the usual return from cider.

Keep Late Spring Pigs on Good Growing Ration

Late spring pig litters should be kept on a good growing ration well supplied with either skim milk or tankage. If there is any indication of cheaper corn this fall these late spring pigs might be carried along for growth on a limited corn and tankage ration while on good pasture. Until good pasture does arrive a liberal supply of tankage or skim milk and grain should be provided.

Little is gained by keeping a pig down to half efficiency by a limited ration. Young pigs become stunted on pasture alone. At least two pounds of grain daily on good pasture for 100 pounds of live weight are required for best results.

Blanching and Storing Celery for Winter Use

Banking with earth is the ordinary method of blanching celery. Boards placed at each side of the row and held upright with stakes are sometimes used and especially prepared paper is also used in this manner. An ordinary three-inch drain tile set down over each plant is satisfactory. There are several different methods of storing celery for home use. It may be placed in trenches, a good cellar or in the pit of an ordinary hotbed. Detailed information for these different methods and also much other valuable pointers to celery growers may be found in Farmers' Bulletin No. 1269, entitled, "Celery Growing," which may

be obtained free of charge by writing the division of publications, United States Department of Agriculture, Washington, D. C.

Hay Shrinkage in Mows Not Easily Determined

It is impossible to give any rule for the shrinkage of hay in the mow because there are so many factors entering into the problem. The weather, the stage of maturity when harvested, different methods of curing, etc., all influence the shrinkage of hay. Experienced hay buyers usually figure on a shrinkage of about 20 per cent in the mow but this cannot be considered a definite rule for it may range all the way from a negligible amount to 40 to 50 per cent, depending upon the water content of the hay when placed in the mow.

If you want to buy a cow, a team, mules — or anything — try a Want Ad in the Gazette.

Great Idea
It is odd no one has ever thought to devise a lawn sprayer embodying the principle of the grape fruit.—Detroit News.

When Oysters Are Good
Oysters should not be eaten during their spawning months. It is merely a coincidence that these months in the year do not contain the "r."

DeForest Radio Sets

The only proper way to buy a Radio set is by comparison. There are so many different makes of radio sets, and as each company makes particular claims for their own set the public cannot, without a home demonstration, determine which is the best.

Let us bring a DeForest set to your home and come with and 5 tube set regardless of price. You will at once notice the better quality of tone and not that loud blasting noise which is the fault with most 5 tube sets.

We invite you to come and listen to the radio programs any evening from 5 to 10.

Remember this, DeForest is the inventor of the vacuum tube. He is the man who made possible radio reception in the home, and it is only reasonable to expect that a man of his exceptional mentality is not going to put a receiving set on the market unless it is one of the best.

Let us demonstrate at your home.

Farmers Have Own Nitrogen Factories

Plant Is Available Where Legumes Are Grown.

"In clover and alfalfa New York farmers have a nitrogen factory on their own farms of greater practical value than any one could ever develop at Muscle Shoals," says Prof. E. L. Worthen, of the New York State College of Agriculture at Ithaca. He advocates the "farm fertilizer factory" to the limit of efficiency whether it be on a dairy, vegetable, or fruit farm. By the farm fertilizer factory, he means growing more clover and other legumes in the rotation, conserving and fully using farm manure, and producing and returning to the soil organic matter as green manure, through catch-and-cover crops.

"Where clover or alfalfa is produced and farm manure is well used, acid phosphate will suffice," he declared. He further stated that the New York grain and hay producer must meet the nitrogen and potash needs from his own farm so that he need purchase only acid phosphate as a fertilizer, if he is to compete successfully with the western farmer.

In intensive vegetable crop production, Professor Worthen says, a mixed fertilizer can be used to advantage. Under these conditions, high analysis mixtures such as the 5-10-15 and 4-12-4 should be purchased or home-mixed. When vegetables are grown under field conditions manure and acid phosphate may to some extent replace complete fertilizer.

"More nitrogen from the inexhaustible supply of the atmosphere through more and better clover, additional nitrogen and potash from the farm manure supply, and a larger proportion of the fertilizer investment in acid phosphate will," he says, "lower the cost of production of grain, silage, and hay on New York farms."

Fattening Turkeys for the Thanksgiving Trade

Turkeys allowed to range without confinement are usually about as fat from home about the middle of the morning as they will get. Wherever they may be, they seek out cover or places with shade where they remain until the cooler part of the afternoon, when they begin to range toward their roosts for the night. It is in taking advantage of this fact that they are confined until the latter part of the morning and their ranging area thus reduced.

By adding corn to their ration and giving increasing amounts as the turkeys fatten, the turkey hens which are to be put on the market may be prepared for the Thanksgiving trade. Usually it is more difficult to fatten the toms at this time, as they have larger frames, and it requires more feed to cover them with flesh. Thus it is usually found best to supply the

amalgamating trade with turkey news and to supply the Christmas trade which comes late in December with turkey toms which have had a longer fattening period.

Right Time to Destroy Weeds Is on Sunny Day

The best time to kill weeds is right now, and the worst time to let them go to seed is also right now. That is within certain limits, of course, but any sunny day is a good time to give Mr. George W. Weed a blow beneath the belt. And the more unscrupulous and vicious the blow, the better. For weeds that go to seed are the ones that really count, say gardeners at the state college. Different weeds have from a couple of dozen to a couple of thousand seeds, with the majority running toward the latter classification, and the fly with a million offspring has nothing on the weed with a million seeds. It's true that the seeds may not all grow, but killing the weeds is the best insurance. If necessary the dead weeds may be burned to get rid of the seeds. At any rate, take no chances with weeds—they're bad characters.

Importance of Keeping Winter Wheat Crop Pure

The importance of keeping winter wheat pure is emphasized by farm crops men of the Minnesota university. Since mixtures of rye reduce the market value of winter wheat by lowering grades, the planting of wheat on fields that have not produced winter rye for several seasons is the best way to avoid this difficulty.

The university men do not recommend winter wheat as a regular crop in the Red river valley. In the north central part it may be grown successfully if Minturki or some variety equally hardy is planted early in September. Minturki has also proved satisfactory in central and southern sections.

Winter rye is a successful crop in northern Minnesota when a hardy variety is sown the first part of September. Swedish rye, Minnesota No. 2, is recommended for northern and central portions of the state. In the southern part Rosen rye may be grown successfully except on high exposed fields where the snow is likely to be blown off during the winter.

Grow Horse-Radish From Cuttings Set in Spring

Horse-radish requires a very deep, cool, rich soil and late season growth for the best results. It is propagated from cuttings of the small side roots. The cuttings are made from the roots when they are dressed for market in the fall and are stored in the cellar or in pits as other roots are during the winter. These cuttings may then be planted in early spring but since most of the growth is later in the season it is customary to hold them till later and plant with some other crop such as early cabbage or beets. When planted the top of the cuttings should be from three to five inches below the top of the soil. Horse-radish will grow until freezing weather when it should be plowed out, cuttings made for the following year and the desirable roots marketed.

FARM NOTES

Soy beans are a satisfactory protein supplement to corn or other grains.

Nature's tonic for growing pigs is pasture and the exercise, sunshine and clean surroundings it affords.

Winter quarters for the breeding flock need not be elaborate unless the lambs are to be dropped early.

Probably no other piece of farm equipment has more fully demonstrated its value than has the silo.

More honey bees are needed in many apple orchards to adequately insure cross-pollination, entomologists have proved.

In spite of the haphazard management they receive, farm woodlands of the United States produced \$394,321,828 worth of forest products in 1919.

Saving sometimes means losing; eggs held only a few days develop watery whites on the way to market, and thereby bring a lower price.

The common brown rat breeds six to ten times a year and produces an average of ten young. The feed rats consume on many farms would more than pay taxes. Ask your county agent about barium carbonate poison. It's inexpensive and effective.

Early plowed kafir stubble makes good oat ground.

Clean hens in clean quarters make for poultry profits.

Fifty ears of corn should be gathered for every acre to be planted next year.

Poison bran mash is an indispensable item on the last banquet menu for grasshoppers.

Corn selected for seed should be stored at once in a dry, well-ventilated place where it will cure quickly and remain dry.

Roughly, soy straw may be regarded as about two thirds as valuable as clover hay, but this is not an exact figure by any means.

PULITZER RACE PILOT

Lieut. Cyrus Bettis, who piloted a specially prepared racer in the Pulitzer races at Mitchel field, New York, October 8-10.

Wintering Calf on Grain Too Costly

Gains Do Not Justify the Additional Expense.

In wintering calves the use of grain in the ration increases the cost of wintering materially and does not sufficiently increase the total gains at the time or subsequently to justify the additional expense, says the United States Department of Agriculture. This conclusion was reached from the results of a series of experiments carried on by the department in cooperation with the West Virginia experiment station in which grade Short-horn, Hereford, and Aberdeen calves were used to determine the effect of different winter rations on gains the following summer.

One lot of calves receiving a ration of mixed hay and a grain mixture of 3 parts corn, 1 part bran, and 1 part linseed meal made a winter gain of 98 pounds each, which was more than twice as much as another lot which was fed corn silage and clover hay. The latter drove, however, made a greater gain the following summer on pasture and lacked only 42 pounds of reaching the same total as the grain-fed calves. The cost of the grain ration through the winter did not justify the extra gains, says the department.

In fact, the experiment was carried until the calves were three years old, in which time the advantage in weight due to grain feeding the first winter was practically all lost by the time they were three years old.

Soiling Crops or Corn Silage as Supplements

Soiling crops or corn silage are recommended as supplements for drought damaged pastures used for dairy herds. If the dairyman lacks corn silage and is not in position to feed a soiling crop, he should give his cow a grain ration, says O. G. Schaefer of the dairy division, University farm, St. Paul, Minn. For average or low producing cows on pastures badly burned the grain ration should consist of equal parts of corn and oats or equal parts of barley and oats. For cows of more than average production one pound of oil meal should be added to the ration for every five or six pounds of the corn and oats or barley and oats. Where no pasture is left at all the cows should be fed about as in winter.

Save Farm Machinery by Covering and Painting

Now is the time of year to get all the farm machinery under cover and painted.

If the metal is covered with paint, it will not rust. Rust destroys thousands of dollars' worth of farm machinery each year. Not even a wealthy farmer can afford to neglect his machines.

Grease and rust that has accumulated should first be removed. The rust may be removed by means of sandpaper, or a strong steel brush. Grease may be removed with soft, warm water.

A coat of paint over anything is the same as a covering, and protects what it covers from the elements. It is economy to paint.

Alfalfa Crop Improved by Cutting in the Fall

Alfalfa will stand the winter better and give larger yields of hay the next season, if it is cut in the fall in time to permit a growth of at least one foot high before winter sets in. This growth is necessary for the winter protection afforded and permits the storage of food reserves in the root system so that the next year's crop will start off vigorously and produce a maximum yield of hay. Experience of numerous farmers confirms the recommendation, and, taken with the experimental data, affords the basis for the soundest farm practice in growing and harvesting the crop.

Satisfactory Source of Water for Dairy Cows

Cows which are producing milk require a larger quantity of water than for the same animals when they are dry. This is caused by the need of water to be used in the milk and also for the digestion and assimilation of a larger quantity of food.

Tests which were made in Missouri showed that cows consumed practically four times as much water when milking heavily as when dry. There is a larger consumption in summer on account of the larger evaporation of moisture from the body.

Cows which are on heavy feed and producing large quantities of milk should always have access to good water at least twice a day. With dairy cows the water supply should be close at hand, especially during cold weather for the reason that the

cows will often do without the water which they need rather than to brave the cold. If they do not get the water needed the milk supply will shrink.

The use of ponds as a source of water for dairy cows is not objectionable if there is no seepage of manure into the ponds or if the cows are not allowed to enter the water. However, most ponds have both of these objections. The most satisfactory source of water is from a deep well.

Riches Defined
Riches do not consist in having more gold and silver, but in having more in proportion than our neighbors.—Locke.

Fish Has Vocal Powers
Scotch fishermen have revealed that the fish called "the butterman" produces a hooting sound when landed.

ESTRAYED I have taken up the following described animal at the east end of the Village of Kendrick, October 26, 1925: 2 year-old black heifer, left ear cropped. I will sell same at public auction at the N. B. Long & Sons stock yard at the west end of town, at 10 o'clock a. m., November 14, 1925. J. G. Gardner, Constable.

Bitter Milk Cause It is quite common for some cows to give bitter milk for some time before calving, especially if they have been yielding milk for eight months or more. When the trouble starts the milk secretion had better be dried off at once if the cow is within two months of calving. If it starts much before that time she should be given a pound dose of Glauber salt in three pints of tepid water well sweetened with molasses. Roots or silage bran and oilmeal, not cottonseed meal, are necessary.

Birds Control Insects in Garden and Orchard

Set the birds up to housekeeping and they will work for you—that, in brief is the idea conveyed in a news letter from the United States Department of Agriculture. The letter cites the example of 2,000 nests supplied for birds on the Baron von Berlepsch estate in Germany and the escape of this estate from the leaf-roller when trees on other estates were defoliated. Evidently the birds kept the insects under control. Says the letter of the United States Department of Agriculture: "Experience has shown that those who have increased the number of birds on their property have had cause for satisfaction rather than regret."

Harvest Soy Beans for Both Seed and Hay Crop

Soy beans are cut for seed when most of the leaves have fallen and the pods are nearly ripe. When the crop is allowed to get this ripe it can ordinarily be harvested with a fair degree of satisfaction with a grain binder. If the crop is cut earlier than this, a grain binder does not work so very well. Soy beans are cut for hay when the lower leaves have turned yellow and the pods are about half filled. In this case it is best to use a mower and to handle the soy beans in the same way as ordinary hay. Full information along this line can be obtained from the Iowa station at Ames by applying for Bulletin 238, entitled "Soy Beans for Iowa."

Freak Fashion

At one time it was a fashion to inscribe gifts of jewelry with the letters A. E. L. which form the Greek word meaning always, or forever. When the fashion died people forgot the significance of the letters.

Newsy Notes

From Southwick Written for the Gazette by Special Correspondent

Doc. Betts moved his household goods and family Saturday to the place he recently purchased.

Mr. and Mrs. Clarence Henderson of Potlatch spent Saturday night with her parents, Mr. and Mrs. Ralph Wright.

Aleck Lawrence of Southwick and Miss Sarah Reichle of Crescent were married at Lewiston the 27th. They were charivariated Thursday evening. The community wishes them a long and happy life.

Mr. and Mrs. Doc. Triplett and Charlie Greenwood left Monday for Marshfield, Ore., for a visit with relatives. From there they will go to Mohler, Ore., for a visit with relatives there. They will drive through in their car.

Mrs. Frank Wilmot has been quite ill the past week but is slowly recovering from late reports.

Mrs. Leslie Triplett returned Sunday from Lewiston, where she has been for the last several weeks.

Homer Betts has moved to his place adjoining Southwick.

Leslie Triplett has moved to the property recently vacated by Steve Douglas.

Floyd Russell and wife were Kendrick visitors Saturday.

Mr. and Mrs. Fairley spent the week-end at the home of Hugh Parks in Leland.

Mr. and Mrs. C. E. Hewitt and Mr. and Mrs. Harland Hewitt spent Sunday at Roy Blankenships in Bed Rock.

Mr. and Mrs. Ed Wetmore spent Sunday with Mr. and Mrs. Raymond Blankenship.

Jesse Thornton has moved to the place just vacated by Mr. Bunger.

Matt Kazda was a Lewiston visitor from Friday till Monday.

Mr. and Mrs. Gwen Mustoe went to Lewiston Wednesday, returning home Sunday.

Mrs. T. J. Armitage went to Moscow Friday to visit her son Elbert, who is attending school at that place, returning home Sunday.

Miss Clara Hayward who is attending school at Moscow, spent the week-end with her parents, returning back Sunday. A dinner was given at the home of Mr. and Mrs. Ben McCoy Sunday, in honor of their son and wife, Mr. and Mrs. Elton McCoy. Those that were present were Harry Smith and family of Leland, Mr. and Mrs. Clarence Henderson, of Potlatch, Wm. Henderson, wife and daughter Nellie, Milton Benjamin and wife, Wm. Whittinger and wife, Elton McCoy and wife, Mrs. E. M. Locke and Ben McCoy and family. The afternoon was spent with music and an enjoyable time was reported.

John McIver arrived from Saskatchewan, Canada, Friday night for a visit with his son and family.

Mrs. Albert Bailey arrived Monday from Mabton, for a visit with her mother, Mrs. Wells and other relatives. Kendrick Gal. one Pierce

(Too Late for Last Week) Mr. and Mrs. Clarence Henderson, of Palouse, arrived Saturday afternoon for a short visit with relatives, they left for their home Monday. Mr. Henderson has employment at the Potlatch mills.

Steve Douglas moved from the residence on main street to the Smith property just lately vacated by Walter Triplett.

Mrs. Floyd Russel spent the day Monday with Mrs. Ben McCoy.

D. B. Triplett and wife and Charlie Greenwood drove to Lewiston and back Monday.

Mr. and Mrs. Wm. Whittinger spent Monday at the home of their son, Harold.

Frank Thornton is moving into his new residence that he has recently built on his place south of town.

Fred Bailey of Texas ridge was a Moscow visitor yesterday.

Charles G. Pool, cashier of the Farmers Bank, was transacting business in Lewiston, Wednesday.

Mrs. A. R. Shumaker of Pullman arrived yesterday afternoon to visit friends here.

\$10,412.23 Paid For Hogs

Monday was another one of those banner hog days in Cottonwood when farmers in this community delivered to the Farmers' Union 458 head of porkers for which Manager Tarbet checked out to the farmers the sum of \$10,412.23. The hogs netted the farmers \$11.40 a hundred weight. They were shipped out Tuesday morning and were loaded in two double decked cars and one single. This is the heaviest shipment of hogs to leave in Cottonwood in several months.

David Wright, a farmer residing on the hill south of Cule-sac, is the spud king of that region in a season of good crops. He has a 12-acre field from which he has taken 1500 sacks. He sold the entire crop at the field, securing \$1.50 per sack, his gross income for the field being better than \$2,000 or nearly \$200 per acre.

November 11 Holiday

Boise, Nov. 1.—Governor Moore announces that by act of the eighteenth session of the state legislature Armistice Day, November 11th, was placed on the statutes as a legal holiday. Therefore, it will be necessary for him to follow the custom adopted in 1919 of setting aside this date as a legal holiday by special proclamation. As all other legal holidays provided for by legislative act, it will be observed officially by closing of offices at the state capitol.

Governor Moore also calls attention to the selection of November 11th by the Disabled Veterans of the World War as their annual "Forget-Me-Not Day."

While Armistice Day is generally observed as a time of rejoicing, Governor Moore feels it is not inconsistent to remember on this date the veterans who participated in the victory of

1918, but came through the war with maimed and disabled bodies. They still appeal to the American people for assistance. Purchase of the "forget-me-not" flower offered for sale on November 11th will assure these men of sympathetic remembrance and secure for them many little luxuries not provided by the government.

Supplements Needed as Pastures Begin to Dry

Soiling crops or corn silage are recommended as supplements for drought damaged pastures used for dairy herds. If the dairyman lacks corn silage and is not in position to feed a soiling crop, he should give his cows a grain ration, says O. G. Schaefer of the University farm, Minnesota university. For average or low producing cows on pastures badly burned the grain ration should consist of equal parts of corn and oats or equal parts of barley and oats. For cows of more than average production one pound of oil-meal should be added to the ration for every five or six pounds of the corn and oats or barley and oats. Where no pasture is left at all the cows should be fed about as in winter.

CRACKLINGS

The hours I spend with thee, dear heart,
Are raught with joy and bliss, although
At times I'd like to kick apart
My radio, my radio.
Each word a shriek, each song a blare,
But still I tune and tune in vain—
I listen in unto the end, and there
You screech again.
"B" batteries and ampliphone,
O tuning coil that makes me cross,
I wish that I could cure your static groan,
But you're a loss, sweetheart, a total loss.
