

JULIAETTA COMMUNITY NEWS

School Closed

Friday morning the old school bell rang out its beckoning tones, calling the pupils back to the school for the last time for three months, and the last time forever for a few of the students. Altogether the past term has been very successful.

In the evening the graduation exercises were held in the Methodist church. The church was beautifully decorated with flowers and crepe paper. It was filled to overflowing with people who came to express their hearty congratulations to the members of the graduating class.

The salutatory and valedictory were both well given. Dr. Russell of the department of education at the university of Idaho gave a very interesting address on "What We Do". The girls chorus sang 2 lovely songs. The diplomas were presented to the class by Mr. Gregory.

Only a portion of the teachers have been hired for the ensuing year as yet.

Juliaetta Played Pomeroy

The Juliaetta base ball team was defeated in a close game by Pomeroy last Sunday afternoon by a score of 4 to 6.

On Monday, May 30, Decoration Day, the boys will play a game with a team from the university of Idaho, on the local diamond.

Surprise Party Given

Last Saturday evening a large crowd of neighbors and friends gathered at the Jim Whalen home and completely surprised Mr. Whalen and son, William. Although they were surprised, nevertheless they were greatly pleased, and it didn't take them long to dig out the old fiddle and mouth-organ and some cards, the readers can imagine the rest. A beautiful supply of good things to eat was taken along and served at midnight. Everyone thoroughly enjoyed the evening.

Juliaetta Local News

Frank Neil arrived here from Chehalis last week to visit his mother, Mrs. S. Hammond.

Louis Malnarich left Thursday for Pullman.

H. H. Greene made a short business trip to Spokane Saturday.

John Colwell, Jr. is visiting in Spokane this week.

Bruce Glenn was a Lewiston visitor, Friday.

Henry Keller transacted business in Moscow, Saturday.

Steve Walcher was a visitor in Kendrick Saturday.

Forest Gallaher left Saturday for Kamiah where he expects to remain all summer.

Mrs. O. H. Torgerson went to Spalding on a visit Saturday.

Ruth Leland was a visitor in Troy, Sunday.

Loey Reichman came down from Moscow Friday on a bicycle to visit his father. He returned Sunday as far as Troy on the train and the remainder of the distance on his bicycle.

Jim Hall was a visitor in Troy Sunday.

Mary Keller left Sunday to be with her mother in Ferdinand during the vacation.

Loey Huntsberger and Alonzo Guthrie, who are with the bridge crew at Fellon, spent Sunday with home folks.

Mrs. George Laughton and Mrs. Moore were Kendrick visitors one day last week.

Jim Carlton came home from Lewiston, Tuesday, where he has just completed his business course.

C. W. Jessup motored to Lewiston Tuesday.

Miss Clara Nye went to Troy Tuesday where she is employed in the confectionery.

Anizel Greene returned this week from Idaho Falls, where she has taught school for the past term.

Frank Howell of Buffalo, N. Y. arrived Sunday to spend his vacation with relatives and friends.

Mr. and Mrs. Asa Calvert, who visited a day or two here, went to Myrtle, Tuesday.

Dr. J. W. Noble and two sons, and Dr. Foster, all of Clarkston, visited at the Charlie Noble home the first of the week.

Frank Neil was a Moscow visitor Tuesday.

Mrs. C. G. Talbott and son re-

turned to their home in Potlatch Sunday after having visited with friends and relatives here for a short time.

Joe Alexander of Lewiston is here this week.

There were only three piano tuners in town this week, and it is most likely that all the pianos in this vicinity are in good shape by now.

George Gallaher of Walla Walla is visiting with his brother, Ed, this week.

Mr. and Mrs. Dennis Buckalaw and children were Sunday guests at the Frank Spray home.

Mr. and Mrs. George Hutchison and family, Mr. and Mrs. Ralph Richardson and Mr. and Mrs. Robert Hall and son, Paul, made up a crowd which motored to Lewiston, Sunday, and were guests at the Robert Farnell home there.

Mr. and Mrs. J. M. Hedler motored to Lewiston, Tuesday evening.

Mrs. Willard Smith, who was a teacher in the Juliaetta school for the past year, left for her home in Winchester this week.

Mrs. Amos Nigh and three daughters, Mrs. L. Huntsberger and daughter and T. J. Colwell, were Sunday visitors at the John Bulen home in Cuddebec.

Mrs. M. D. Daves and Mrs. Willis Buchanan were Lewiston visitors Tuesday.

Mrs. R. G. Snyder and children returned to their home in Grangeville after a short visit at the Amos Nigh home. They were accompanied home by Miss Agnes Nigh.

N. M. Talbot, Mr. and Mrs. F. Vincent and daughter, Wilma, and Charlotte Nigh were business visitors in Lewiston, Tuesday.

The telegraph line work crew which has been stationed here for the past two weeks moved to Kendrick, Wednesday.

Mrs. Joe Perry and son, Commodore, and Mrs. Charlie Wright and daughter, Clara, went to Lewiston Monday, where Mrs.

Perry received medical aid. E. A. Dilly of Los Angeles was here Wednesday renewing acquaintances. H. O. Loseth of Lewiston was in town on business this week.

THE KENDRICK GAZETTE
"The Pulse of The Potlatch"

Published every Friday at Kendrick Idaho, by Ralph B. Knepper

Subscription Price - \$1.50

Entered at the Post Office at Kendrick as second class mail matter.

The patrons of the Troy schools are to be congratulated upon securing the services of W. D. McGregor for their seventh and eighth grades. Mr. McGregor has taught here for the past three years most successfully and the patrons of the local school sincerely regret to see him leave. Out of a class of sixteen pupils this term, fifteen of them passed the state examinations with good grades, which speaks rather highly of his work the past year. Mr. McGregor is an ideal teacher and is tireless in the efforts he puts forth to see that they make satisfactory progress. Any pupil of normal

intelligence with seventh and eighth grade work under Mr. McGregor is assured of a good start in high school.

Announcement in last week's Deary Press states that after the issue of this week the paper will suspend publication as the publisher, J. C. Peterson, will move to Troy to take over the Troy News. Mr. Peterson has published a good paper at Deary and he has been an ardent booster for that town for a number of years. His tireless efforts in behalf of public affairs of Deary will probably be more fully appreciated after his paper has suspended publication.

Polar Region Quadrants

The south polar region is divided into quadrants. The American quadrant, from latitude 0 degrees to 90 degrees west; the Australian quadrant, 90 degrees east to 180 degrees east, and the Pacific quadrant, 90 degrees west to 180 degrees west, have been explored by various expeditions. The African quadrant, from longitude 0 degrees to 90 degrees east, is the unknown region.

Too Warm for Ice Skating

At no time of the year is it possible to skate on ice in any division of Australia.

Or Give In?

Wrestling makes a man stronger, but should a man wrestle with his conscience?

W. F. BEHRENS
The
Cletrac Tractor Dealer

Invents and manufactures a four row bean cultivator which is fastened to the Cletrac and with this wonderful invention is able to cultivate from 50 to 100 acres of beans a day and do a better job than ever could be done with a horse cultivator.

It will also cultivate summer-fallow—cuts 12 feet clean—can be used for all year round weeding. This machine pushes ahead of the Cletrac and other tools can be pulled behind the tractor.—Once over, all over. Mr. Behrens had one which he made last year and cultivated his beans. 100 acres can be cultivated with this machine for less than 10 cents an acre for gas. With horses it would cost nearly \$1.00 an acre. This machine costs about \$100, and will pay for itself in two days work. Mr. Behrens recently quit farming to put more of his time to selling Cletrac Tractors, which are crowned the world's Champion Tractors. This is fast proving to be true for many satisfied users of Cletracs claim the Cle-

trac can't be beat for a farm tractor. Wheat as well as beans must be produced for lower cost, therefore the Cletrac and the Four Row Cultivator will solve your problem satisfactorily.

The Cletrac will plow for 40 cents an acre and cultivate for 10 cents an acre; does any loose ground work—in fact, show us a job the Cletrac can't do, or a hill it can't work on—this can't be found. And the next day when the tractor doesn't work it doesn't eat and your horse does. Think of a small 2-ton Cletrac pulling a 5-ton combine harvester up our hills and along side, this is almost like hitching a small ant to a 3-inch wagon. An ant can move a load 4 times its own size, like the Cletrac they have power and traction.

See the new Cultivator—we make them right in Kendrick. The cultivator will be known as the "Idaho Special."

DAIRY

UNDERFEED COWS ARE EXPENSIVE

It costs more to underfeed a producing cow than to feed her properly.

A cow giving her maximum amount of milk will return nearly 48 per cent of the feed she eats in milk. The other 52 per cent is used in maintaining her body. A cow that is underfed will keep using enough feed to maintain herself and let the milk pail suffer for the feed shortage. Ivan McKelip, extension specialist in dairying at the Ohio State university observes,

In feeding a cow for maximum production it is necessary to feed the right quality. The various food elements, as protein, carbohydrates and fat, must be fed in correct proportions. Ohio cows as a general rule are fed enough carbohydrates and fats, but very often they are underfed in the protein ration.

Balance to the ration is important for milk production, for it must be made according to nature's formula. The cow has no part in the composition of her milk. If she is underfed in any one of the foods the milk pail suffers.

It takes \$75 to \$125 a year to maintain a cow that produces 300 pounds of butterfat a year. The variation comes in feed prices that are different in the different parts of the state.

Feeds can be substituted if costs for certain kinds of commercial concentrates go too high. Milk cost \$4.26 a hundred pounds when the ration was silage, timothy hay, corn and barley. The same ration, excepting that red clover hay was fed instead of timothy to the same cow, enabled her to produce milk at \$1.63 a hundred pounds. When alfalfa hay was substituted production costs were cut to \$1.21 a hundred pounds of milk.

POULTRY

THAWING FROZEN COMBS IS EASY

"Thaw frozen combs on poultry by applying snow or ice water," say poultrymen at the New York State College of Agriculture at Ithaca. "Carbolated grease, which may be purchased at most drug stores, will do the trick. A New Jersey agricultural bulletin suggests the following ointment: Five parts of refined petroleum, three parts of glycerin, and one part of turpentine by volume. This should be applied gently and rubbed in fairly well. Remove the black dead tissue from badly frozen combs, so that they will heal more quickly.

"At this time of year many flocks suffer from frozen combs. This trouble is particularly bad with roosters of the single-comb White Leghorn breed because their combs are so big. If a rooster's comb is badly frozen, it seriously affects his vigor and impairs his usefulness in the flock."

Poultrymen at the state college say that the best farmers in the state put their roosters in the breeding pens early in the winter and watch them carefully during the coldest weather so as to minimize the danger of freezing. The college recommends curtains in front of the roost on very cold nights in narrow houses. This is not recommended in houses that are wider than 15 feet. Another suggestion is the use of wooden floats with 1-inch holes in them to be placed in the drinking vessels. This reduces the danger of freezing, as it keeps the birds from dipping their wattles in the water when they drink.

In exceptional cases, it may be well to grease the combs and wattles of especially valuable birds during cold weather. The pens should be kept well ventilated at all times.

Sprouted Oats for Hens

Is Most Excellent Plan

There is nothing in the world that will make the old hens feel as much like spring is here as a box of sprouted oats every day, experienced poultrymen say. Sprouting oats is not necessarily expensive or a lot of bother. Equipment may be homemade. A tub or keg will do to soak the oats in. Five or six boxes about 4 inches deep will do for the trays. A room which ranges from 50 to 80 degrees in temperature all the time is satisfactory. Soak the oats 12 hours in the tub or keg. Drain them and put them in a box where they should be kept moist until the sprouts are about 1/2 inch long. Feed them at that time, which is usually about five days after they are put to soak. Five or six boxes will make it possible to start a box each day and weed one regularly.

Green Feed Is Perfect for Poultry in Winter

Many poultry raisers are now feeding mash to their hens, but a lack of palatable, succulent feed is too often the limiting factor in winter poultry rations. Sprouted oats are one of the finest forms of succulence. The Nebraska Agricultural college poultrymen offer the following suggestions: Good heavy oats with strong germinating power produce best results. Soak the oats for about 24 hours. Drain off excess moisture. Turn into lard tub or candy pail which has holes in bottom to allow excess moisture to drain off. Add moisture later if necessary. Keep in fairly even moderate temperature. Feed, when the sprouts are one-half to one inch long ("greening" is unnecessary).

Ration for Goslings

A ration recommended by the United States Department of Agriculture for goslings up to eight weeks of age is equal parts by measure of bran, middlings and steamed cut clover or cooked vegetables. Feed morning, noon and night. If it is desirable to fatten them at this age or at ten weeks of age, they should be placed in the pen where they will not exercise too much, and fed corn meal mixed to a dry crumbly state, and beef scrap amounting to 20 per cent of the bulk of the corn meal.

Culling in the Spring

A little more culling in the spring may take out a few hens that do not look as good as breeders, and layers as they did last fall. Sometimes a few hens become too fat. Maybe one or two will be heavy and listless and fail to scratch for grain or come from the roost promptly in the morning. A little about the condition of a flock can be told by opening the house suddenly on a sunny day. Watch the good hens flock out and begin to enjoy the range.

Better Hatching Eggs

A new requirement which must be met before eggs will hatch well, even under the best care, is called to the attention of poultry raisers by the investigators at the Missouri College of Agriculture. This new requirement is that the eggs must be from hens that have been fed a ration containing certain vitamins. Though not fully understood, the vitamins are substances that have a very important effect on the animal that eats these

Careless Handling of Manure Costly

Best Plan Is to Apply It to Land as Produced.

Fully 50 per cent of the value of farm manure may be lost through careless handling.

One way of handling farm manure is to apply it to the land as it is produced. This may be accomplished to advantage by pasturing off crops, provided animals are not allowed to run on the fields when the soil is wet. When the manure is handled this way the losses are perhaps not as great as through improper storage. There is, however, a serious disadvantage to the method in that one cannot always apply the manure where it should go, and, in some cases, it may be necessary to store it at least a part of the year.

The liquid portion of manure contains a large percentage of the total nitrogen and potassium. When this is not saved much of the value of the manure is lost. Therefore, when cattle are fed in the feed lot and the manure is stored in the open, the manure pile should be on level ground to prevent the liquid from easily draining away. If the manure is stored in a loose pile rapid fermentation dries it out and much of the organic matter is lost. Such losses, however, may be reduced by keeping the manure firm and moist.

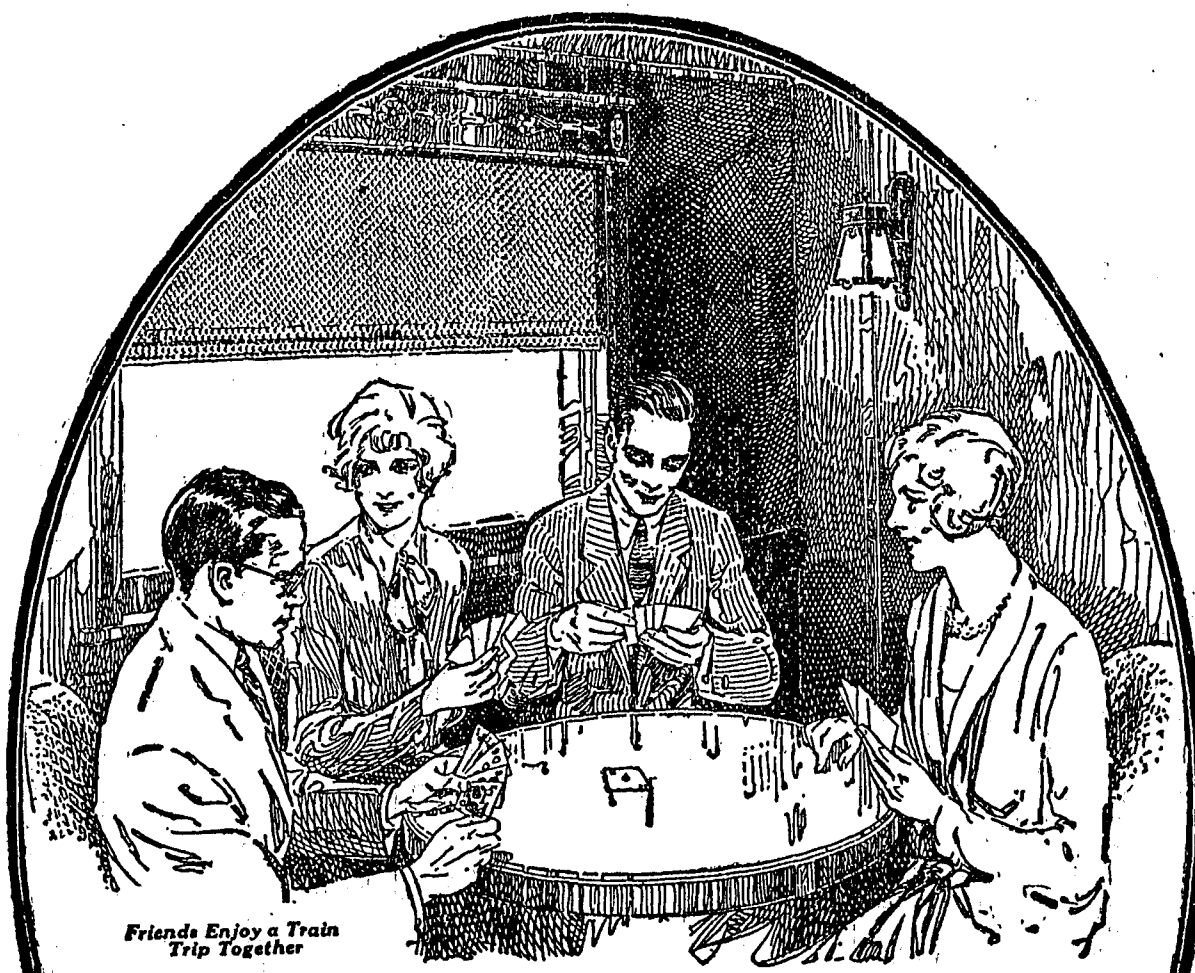

Piling the manure in the field, expecting to scatter it quite a while later, is bad practice and should not be followed. The loose open nature of the pile encourages fermentation, which increases the loss of organic matter and nitrogen.—F. B. Smith, Agronomy Department, Colorado Agricultural College.

Temperature Variations Cause Digestive Ills

The milk which is given to the calf should be the same temperature as when it comes from the cow. Variations in temperature, especially the feeding of cold milk, will very often cause digestive troubles. For the first five or six days a quart of milk three times daily will generally prove sufficient. Then the amount can be gradually increased until the calf is taking two quarts, three times daily. When the calf is about ten days to two weeks old some whole grain can be added to the milk. A handful will be sufficient so as to get the calf started. At this time it is possible to change to two feedings a day. The calves should also have access to hay. Bright clover hay is good, providing there are no symptoms of scours. If scours are noticeable then it is better to give the calves access to wild hay until their bowels are normal. Calves should have all of the pure water that they wish to drink.

Dehorning Calves

When the calf is young and the beginning horn growth is small, the horn button and matrix from which it grows may be removed with a small chisel or strong-bladed knife. Or the hair may be clipped around the button or small horn and the skin around the base of the horn covered with lard or tallow. Then wet the button or

DAIRY FACTS

Milking Machine Saves Owner Time and Expense

Recent investigations by the farm mechanics department of the college of agriculture, University of Illinois, have shown that even in a small dairy herd of ten to twelve cows, considerable time and labor can be saved by using a milking machine.

On one farm it was customary for the hired man to come in from the field an hour early in the evening to help milk. With the aid of an electrically operated two-unit milking machine the farmer now does all the milking himself and does it in about one-half the time, according to F. C. Kingsley of the department. It requires about 15 minutes a day to keep the milker clean. Some trouble was experienced last summer in the milk souring. The cause was traced back to improper cleaning of the milker, and as soon as this fault was corrected no further trouble occurred.

The steps to take in keeping a milking machine clean, are: After each milking rinse the milker units in cold water. Wash them thoroughly in hot water, using brushes provided for this purpose. Washing powders are often used to help clean the parts, but good results have been obtained without using a powder. Then scald all the parts with which milk has come in contact or sterilize all parts in a steam bath. Wash out vacuum pipe and the sanitary trap at least once a week.

Milk Ration for Calf

The milk ration for the calves can be gradually increased until they are taking a total of eight quarts daily. The use of more milk than this will generally give poorer results than the limited feeding. Some people report good success by feeding a gruel to the calves after they are put on skim milk. This gruel is made of equal parts of corn meal and linseed meal boiled together. Others feed corn meal, ground oats and linseed meal.

Raising Dairy Calf

Calves that are properly grown and developed will make the most profitable cows. A large amount of care should be given to the calf throughout its entire development, but more especially during the period after it is first dropped. A large percentage of the losses comes during the first few weeks. If the mother of a calf is healthy there is no better method of feeding the calf for the first 48 hours than by leaving the calf with the mother.

Stanchions Will Prove Useful in Raising Calf

Stanchions for calves not only insure that each animal will get the feed required but it also keeps them

from sucking one another's ears after they are through drinking their milk. For these reasons most people who make a practice of raising their calves also provide calf stanchions in their calf barn.

Calf stanchions may be from 36 to 42 inches in height, and 28 inches in width. A space about 4 1/2 inches in width is about right for the neck of the average calf. The feed trough should not be too wide, about 14 inches generally proving satisfactory. Stanchions and feed troughs of this kind can be constructed the same as many of the cow stanchions, except that the material will not need to be so heavy.

Calves should never be fed milk in a trough. Some will drink much more rapidly than others and get more than they should have for best results, while others will not get the amount needed. Separate buckets should be furnished for each calf. After the calves are through with their milk they can be given grain in the trough. If the trough is partitioned it will give better results for the same reason that favors separate pails for the milk.

Dairy Notes

One beauty of poultry is that it coordinates so nicely with dairying.

Cool the milk to 50 degrees F. and hold at this temperature as nearly as you can.

It is a mistaken idea to think that legume hay—no matter how good—makes silage unnecessary in the cow's ration. The two are essential.

Apples or apple pomace may be fed to dairy cows as a substitute for corn silage.

Skim milk or buttermilk which comes from creameries that fail to pasteurize thoroughly, is a constant source of danger in spreading the disease to live stock.

In many dairy barns individual drinking fountains are being placed at the stall heads, so that stabled dairy cows can drink as much and as often as they please.

Frequent deliveries of cream to the market are essential for good quality. Cream should be delivered at least three times a week in winter.

See that the cow is perfectly clean when she is milked, as these germs likely fall into the milk while the cow is being milked.

The dairyman in need of protein supplements and mill feeds will probably be able to buy them at a lower figure now than a few weeks hence.

Calves raised on the minimum amount of milk, must begin to eat hay and grain at an early age. Only good quality alfalfa or clover hay should be fed.

It pays to use pure-bred dairy sires. South Dakota State college has found that their use on scrub or grade cows increases production in the first cross about 67 per cent.

SOY BEANS GOOD FOR DAIRY COWS

The recent increase in acreage of soy beans throughout the corn belt territory brings up the question as to whether soy beans or soy bean oil meal can be profitably used as a substitute for other protein feeds. It is a commonly recognized fact that the chief problem in feeding the dairy cow is to find a satisfactory protein supplement for the grains which are raised on the farm.

Considerable experimental data has been collected on this subject by different experiment stations. In a feeding test with dairy cows at the Ohio station they found that linseed meal was slightly superior to ground soy beans when fed in equal amounts as a supplement. This finding does not agree with the results at some other stations. At the Iowa station the amount of milk was decreased but the amount of butterfat was slightly increased by using ground soy beans as compared to linseed meal. The South Dakota station found a slight increase in milk but no increase in the amount of fat with soy beans. The Indiana station increased both the milk and the fat by using ground soy beans. The Kansas station found that the use of a large amount of ground soy beans tended to produce soft butterfat.

From these results we may conclude that ground soy beans are equal to linseed meal in the ordinary dairy ration. It is unwise to use them in excess on account of the danger of producing soft butter. In the Ohio experiments the ration fed consisted of equal parts of ground corn, ground oats and ground soy beans for the grain. This grain mixture was fed in the following proportions: One pound of grain, one pound hay and three pounds silage.

Tests with soy bean oil meal have produced similar results to those with ground soy beans. At the Ohio station the soy bean oil meal produced slightly better results in both milk and butterfat production than an equal amount of linseed meal. The Indiana station found that there was no practical difference between the two feeds in balancing up the dairy ration.

The results of these different tests would indicate that Iowa farmers can grow more of their supplements for dairy rations than they have been doing in the past. Soy beans are one legume that can be raised on soil that is slightly acid. They make a good substitute where other legumes have been a failure. Many people are raising them instead of oats on account of their beneficial effect on the soil and the fact that they are as good, if not better, money crop.

Finding Buried Treasure

Scientists have experimented with finding large deposits of ore by means of delicately arranged electrical instruments, as well as other methods, and have had slight success, but no instrument has been made which will detect presence of hidden money or other metal in small quantities.

Changed Day's Beginning

Astronomers formerly began the day at noon, but recently it was decided advisable for the sake of uniformity to use the same day in astronomical work as is used in civil life and commencing with 1925 all the national almanacs began the day at midnight.

Origin Hard to Trace

Authorities differ in regard to the origin of the name "horse" latitudes, some claiming that it was derived from the fact that vessels with cargoes of horses were often so delayed on account of the calms that the animals perished from lack of water.

Launching of the Fulton

October 29, 1814, was important in that it marked a new epoch in the maritime progress of the United States. It was on this day that the United States frigate Fulton was launched. This was the first frigate of its kind.

And Hard to Finish

A home budgeting scheme is a good deal like a correspondence course in architecture, you may not come out anywhere, but it's always interesting to start.—Binghamton Press.

Appropriate Name

"Jackass rope," is the term which the natives of the island of Jamaica apply to the island-grown tobacco. They probably do this because this tobacco is strong and tough.

Religion in Philippines

Religious freedom was granted the inhabitants of the Philippines under the treaty of December 10, 1898. The majority of the civilized inhabitants are Roman Catholics.

Longer Lives for All

Every child born in England has an expectation of 12 years longer life than its grandfather, says Sir George Newman, chief medical officer of Britain.

Point for Reformers

To be engaged in opposing wrong affairs, under the conditions of our mental constitution, but a slender guarantee of being right.—Gladstone.

The Mounting Tide

The scientist who says the oceans will eventually absorb all land isn't what you would call an ideal friend of the parking space hunter.

This age of high standards welcomes the Camel quality

MODERN smokers are the most exacting ever known, and they place Camel first among cigarettes.

For Camel was created to succeed in the hardest-to-please age ever known. It was made to satisfy those who demand the utmost, and modern smokers have given it such popularity as no other cigarette ever had.

If you're downright hard to please, just try Camels. Tobacco taste and fragrance will be revealed as never before, for Camels are rolled of the choicest Turkish and Domestic tobaccos, supremely blended. This modern cigarette exceeds all other standards but its own. To light one is to find taste fulfillment. "Have a Camel!"

McCormick-Deering Tractor Power---for All Work!

EVERY YEAR McCormick-Deering Tractors stand stronger with local farmers. The name McCormick-Deering has become the symbol of reliable power farming because it stands for carefully built, practical, many-sided, long-lived farm power—and the kind of service cooperation we are able to offer our customers.

Men who have used International Harvester tractors—for months or for years—are steadfast friends of McCormick-Deering farm power. They will recommend McCormick-Deering when you come to buy. Other men, who risked using cheaper, lighter tractors, found themselves underpowered. They fell short of reaching full production with the least possible labor and in the shortest possible time. After this experience they were ready for new and better power. There are many like these, too, who will recommend McCormick-Deering when you make your power investment.

LOCAL NEWS

George Wright went to Montana last Friday to visit relatives.

Mr. and Mrs. James Emmett returned home this week from California where they spent the winter. Mrs. E. R. Porter and two little sons of Waitsburg, Wash., accompanied them here for a brief visit. Mr. and Mrs. Emmett expect to remain here for two or three months before returning to California.

Mrs. James Kayler of Winchester visited at the home of Mrs. L. J. Herres last Saturday.

M. O. Raby left last Sunday for North Carolina where he was called on account of the serious illness of his mother.

A. H. Daubenberg attended the meeting of insurance men held at Lewiston the first of the week.

Jerry Simpson, publisher of the Lewis County Register, was a Kendrick visitor last Saturday. Mrs. Simpson has been visiting at the home of her parents, Mr. and Mrs. Claus Eichner, the past two weeks. Mrs. Eichner has been convalescing from her recent operation.

Mrs. Jessie Callison left the first of the week for Wayzata, Minnesota, where she will visit friends and relatives. She expects to be gone all summer and will visit various sections of the middle states.

John L. Woody was transacting business in Moscow last Saturday.

Mrs. George Wright left Wednesday to visit relatives in Colbert, Wash.

Mr. and Mrs. Swegle of Seattle arrived last Friday to visit their daughter, Mrs. Daubenberg.

Mr. and Mrs. J. G. Gardner drove to Spokane, Wednesday of this week on business.

George Wright, accompanied by his daughter, Mrs. Rowe, left Friday to visit his daughter in Montana. Mrs. Grinolds and Lucille went as far as Colfax with them. Mrs. Grinolds visited her son-in-law and attended the graduating exercises of her granddaughter, Jessie Sanders, at Colfax high school. She and Lucille returned to Kendrick Tuesday.

Miss Edith Dammarell returned home the first of the week from her school work at Kamiah. She has been re-elected to teach in the Kamiah schools next year.

Mrs. Mina Davidson and son of Clarkston arrived Wednesday for a visit at the Watts' home.

Miss Winifred Davidson returned the first of the week from Lapwai where she finished a very successful year of teaching.

The families of W. B. Deobald and Otto Schupfer spent Sunday in Lewiston.

Mr. and Mrs. Harry Ross visited relatives in Moscow the first of the week.

A. Wilnot returned from Spokane last Tuesday where he purchased meters and transformers for his new power line to Deary and Bovill. Good progress is being made on the construction work of the line. The holes are practically all dug and poles are being strung along the line.

Katherine Emery entertained a number of her little friends last Saturday in honor of Marjorie Newton. Games were enjoyed and refreshments served.

E. R. Porter arrived Sunday from Waitsburg, Wash., and returned home in the afternoon with his family.

Five car loads of Kendrick Woodmen attended the big open air initiation on Lewiston Hill on Wednesday the 25th. There were close to 500 attended from this district. White Pine Camp of Kendrick put on a fireworks stunt as their contribution to the evenings amusement, which was greatly enjoyed by the neighbors.

Farmers are not the only ones who are dissatisfied with the weather. Most of the kids in town are growling at the frequent rains as the creeks are too high for good fishing. Bud Carlson caught a trout Monday and one Tuesday. By giving them a severe chiropractic treatment they were stretched to the

required six-inch limit. Joe Watts caught a chub this week. These two lucky anglers are about the only boys in town with real fish stories on tap. They say that the successful fisherman must carry his worms in his mouth.

The members of the Okoke club drove to Lewiston last Sunday afternoon and had dinner at the Lewis-Clark. The occasion was the crowning event of a series of bridge parties given during the past few months.

Miss LaPine left Monday afternoon for her home in Iowa.

George Davidson was transacting business in Spokane the first of the week.

Miss Winifred Davidson went to Lewiston Wednesday afternoon to visit friends.

Rev. Miller of Juliaetta is moving to Kendrick this week to make his home. He has rented the rooms back of the post office.

Mr. Brody and Mr. Ryan of the Ruddach Motor Co. of Moscow were Kendrick visitors yesterday.

Mrs. R. D. Newton and two daughters left yesterday afternoon for their new home at Colville, Wash. Mr. Newton arrived Wednesday night and accompanied them.

Breaking It Gently

Simpson was on his deathbed and the doctor had been detailed to tell him there was no hope. "I hope you broke the news to him gently," sobbed the tearful wife. "Oh, yes," replied the physician, briskly. "I told him if he had any bills to pay he'd better not wait till the first of the month."—Pathfinder Magazine.

Card of Thanks

We wish to thank our friends and neighbors for their assistance, sympathy and floral offerings during our bereavement in the loss of our little one.

Mr. and Mrs. Attlee Mustoe.

Big Bear Ridge News

Miss Mildred Kleth is home from Lewiston, where she attended high school the past term.

Luther League Play at Leland

The Luther League of Gifford will give a home talent play at the I. O. O. F. hall, Leland, Friday evening, June 3. The play is entitled "The Chiropractor" and is a serio-comic with a cast of nine male and five female characters in five acts. Everybody is invited to attend the performance. A small admission charge will be made.

Splendid Picture Here

"The American Venus", which is being shown at the New Kendrick Theatre for three days this week, is indeed a gorgeous, spectacular production. It surpasses any attempt ever made in motion picture photography. The color scenes are beautiful, and the fashion show (also in colors), is wonderful. The picture has a good story and will make you laugh as well as thrill you. It is indeed an eye-dazzling riot of youth, beauty and color. 21-1

Linden News

Mr. Mattson went to Moscow the first of the week to take medical treatment.

An error was made in last week's Gazette, in regard to the average grade received by Forest Whisler, it should have read 88 instead of 85, and Lucile Darby of the seventh grade received an average of 94.

C. E. Harris treated his house to a coat of paint last week.

Mr. and Mrs. C. P. Israel have moved to their sawmill near Southwick and began sawing Tuesday.

Wayne Pippenger of Cavendish is assisting his aunt, Mrs. Edgar Bohn with her cows while Edgar is working at Israel's sawmill.

Mr. and Mrs. Albert Dorendorf spent the day Sunday with Mr. and Mrs. Jim Farrington.

Mrs. Arthur Bohn went to Elk River, Monday where she has employment at the P. T. P. A. headquarters.

Claud Vaughan and son, Clair, arrived Monday of last week from south Idaho to visit his sister, Mrs. C. H. Fry, and to renew acquaintances with his old
