"The Home of Good Things to Eat and Wear"

Wait For The Professional

The town of Cimarron has one young son who likes stories almost as well as his fond parents like to tell them. One morning the young man woke up rather

early, called his mother. "Mamma," he said, "please tell me a story." "Now be quiet, dear," replied his mother, "just wait a little while, your daddy will be in soon, he will tell us both a good one."—Ex.

Good Reasons

One little boy notices many things about him for which he cannot quite understand the causes. "Mother," the young man asked, "why hasn't daddy much hair on his head?" "He's almost bald," the mother carefully explained, "because he does such a lot of thinking." "Then why have you got such a lot of hair, mother?"—Ex.

A Good Text

"Bred'ren, in my sermon dis maw'nin' I will explain de inexplicable, I will reveal de unreveable, an' I will unscrew de inscrutable. I takes my text fum de text, 'De widow's mite.'" The preacher paused impressively whereupon a deacon arose in the front pew. "De trouble wid dat is, brudder," he said sorrowfully "Dey do!"—Ex.

Young Jackson got married. On the first pay day he gave his wife thirty dollars of his thirty-five-dollar salary. The next week he reversed the process. "But, Arthur," remonstrated his wife, "how do you expect me to get along on five dollars?" "Hanged if I know," he replied. "I had a rotten time myself last week. Now it's your turn."—Tacoma Herald.

Removing Silage

In removing silage from the silo, only enough is thrown down for immediate needs and this is taken in thin layers over the entire surface, the aim being to allow as little as possible to become spoiled by exposure to the air. The surface must be left smooth and compact, with the center slightly higher than the sides. If the corn was not well distributed in the silo, some care needs to be exercised in mixing the silage on removal to keep the quality uniform and avoid danger of overfeeding.

Kendrick Methodist Church

Preaching at American ridge at 11:00 o'clock.
Kendrick at 7:00 p. m. Subject: "A Sincere Request."

Linden Items

Mr. and Mrs. Clem Israel are the proud parents of a son, born October 28.

Mrs. Millie Abrams entertained a number of young people Friday evening in honor of her son, Harold's, birthday.

Corporal James Smith has returned home from Honolulu-Hawaii, where he spent the past three years in the army service.

Cecil Harris and John Longteig of Southwick were callers at the Smith home, Sunday.

A good time was reported by those who attended the program and pic social at Cedar Ridge school house, Friday evening.

Lester and Clarence Weaver have gone to Bovill where they have employment.

Mr. and Mrs. Weyen attended the funeral of Joday Long in Kendrick, Thursday.

Walter Darby, who visited at home for several days, returned to his work at Moscow, Wednesday.

H. J. Starr made a business trip to Boise, Saturday.

Big Bear Ridge News

Mr. and Mrs. Wallace Emmett and sons, Roy and Homer, were recently visiting at the Horace Comstock home near Farmington, Wash.

Mr. and Mrs. A. Kleth and sons spent Sunday with relatives in Lewiston.

Mrs. Marie Slind returned home Thursday from Spokane, where she was called by the illness of John Slind.

Mrs. O. H. Forest entertained the Lutheran Ladies Aid at her home, Wednesday afternoon.

Miss Mildred Holt, who teaches the Fern Hill school, spent the week-end at her home in Kendrick.

Misses Mildred and Othella Kleth are attending high school in Lewiston.

Mrs. Heselgrave of Missoula, Montana, is visiting at the home of her daughter, Mrs. Bernhart Nelson.

Misses Alta, Allie and Claribel Moore have gone to Lewiston where the latter two will complete their courses at the Lewiston Business College.

Mr. and Mrs. Wayne Mathes and children have moved to Bovill.

Mr. and Mrs. Gabriel Forest spent the week at Colton, Wash.

The Ladies Guild met at the home of Mrs. K. D. Ingle, Wednesday afternoon.

Bear ridge is well represented at the Kendrick high school this year. Those attending are: Newton and Bessie Morey; Gerald, Billie and Alice Ingle; Neva Ware, Lizzie and Bernard Jones, Roy Emmett and Charles Elliott.

W. R. Johnson, union Sunday school organizer of Lewiston, was a recent visitor here in the interest of building a chapel near the Wild Rose cemetery.

Rev. L. Taber of Kendrick held services at the union church Sunday morning and Rev. P. Hesby of Deary at the Lutheran church, Sunday afternoon.

Mr. and Mrs. W. L. Hedge of Moscow were visiting friends here Friday.

Mr. and Mrs. George Larson and son, Harold, were recently visiting relatives on Potlatch ridge.

Word reached here of the death of Mrs. J. C. Carlson, at her home in Moscow, Tuesday morning. Funeral services will be held at LaCrosse, Wash., Sunday at 11 a. m. Mr. and Mrs. Carlson were former residents of the ridge, Mr. Carlson having passed away last June.

Miss Ida Morey spent the week end at home.

Everyone has been busy cutting, turning, stacking or threshing beans between showers.

A splendid Hallowe'en program was given by Miss Mabel Weaver's pupils at the Taney school house, Saturday evening. The Hallowe'en decorations, autumn leaves and flowers gave the school house a very attractive appearance. Following the program a carnival was given and refreshments were served. A social good time was greatly enjoyed by all.

Mrs. A. Sater of Greenwood, B. C., is here visiting Mrs. Thorvald Nelson.

Authorized Ford Dealers

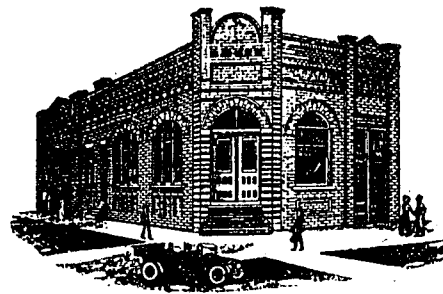

Lincoln *Ford* Fordson
CARS-TRUCKS-TRACTORS

Every Fordson An Investment

We have yet to learn of a single instance where the proper application of Ford Power has failed to result in saving time, labor and money for the user.

In most cases the savings were so great as soon to cover the cost of the equipment. After that came dividends, o, "velvet".

The records prove Ford Power always as a sound investment.

BIG PROTECTION FOR LITTLE MONEY

Do you know we are equipped to safeguard your valuable papers—bonds, notes, wills, insurance papers, as well as jewelry, silverware and other treasured articles?

When we say "Big Protection for Little Money" we mean a Sase Deposit Box with us which rents by the year for \$1.50.

Even a person who has only a few valuable papers needs this protection. We'll gladly explain this service if you will give us an opportunity.

Bank Here and Prosper

Kendrick State Bank

"Your Home Bank"
KENDRICK, IDAHO

How to Begin

A young man asked us the other day. "How do you go about to open a bank account?" Why, it's easy enough. Just about the same way that you would go about it to buy a pound of butter. Walk right into the bank and tell them—any of them—that you want to open an account. They will say "alright" and fix you up a bank book with your name on it and the amount of money you want to leave marked down on it. This book is your receipt for the amount of money you left with them to keep for you. They will also give you a check book. Now you see you don't have to go back to the bank whenever you want your money or part of it. Just write a check. If you want to pay Mr. Blank for that pair of shoes just write a check and see how quick he will take it.

Highest Market Prices for Your Grain and Beans

—oOo—

FARMERS UNION WAREHOUSE COMPANY
Juliaetta, Idaho

**MILK COW NEEDS
PLENTY OF FEED**

Grain feeding should always be in proportion to milk production. The cow in milk, if a Holstein, says C. H. Eckles, chief of the dairy division of the Minnesota College of Agriculture, should be given about one pound of grain to every four pounds of milk produced. A Guernsey or Jersey needs one pound of feed to three of milk. The dry cow in good condition needs little, if any, grain.

"The cow is a milk machine," says Doctor Eckles, "and feed is the raw material. Like any factory or machine, economical operation is possible only when plenty of raw material is available. Turning a dairy cow loose in a pasture does not insure that she will get sufficient feed to hold up in milk production as she should, especially from now until the time when regular housing and dry feed will be in order. Practically every real dairy farmer will have silage available. Don't wait too long before beginning to use it. Within ten days after silo filling is completed, the silage is ready to use and unless pastures are unusually good it is well to begin feeding it. The experienced man knows that it is easy to let cows drop down in milk from poor feed, but very hard to bring them back to the high level again later even if good feed is given. Good management means keeping the conditions and feed right all the time so there will be no drop in milk at any time from lack of feed. The cow that has what silage she will eat will be well cared for so far as roughage is concerned so long as the pasture furnishes fair grass. When the grass begins to fall, bring out the alfalfa and clover."

Agricultural Items

Soy beans in corn for hogging down reduce the tankage bill.

Much more corn is damaged by fall frosts before it is matured than by spring frosts because it is planted too early.

Rhubarb may be transplanted in the fall or spring. If moved in the fall, any time after the frosts have killed the tops.

The laying hen never loaf.

Silos should be tight enough to keep the juice in and the air out.

As a cash crop, soy beans can be successfully grown, especially on the lighter and sandier soils.

The very first step in successful storage of onions is careful curing, and this careful curing must start in the field.

Rye is an excellent nurse crop for clover seed owing to the fact that it can be cut earlier for grain than either wheat or oats.

One cannot afford to spend ten dollars' worth of time repairing a machine that is not worth ten dollars after the job is done.

Successful onion storage demands a cool temperature and low humidity, so it is especially important that they be stored in a well-ventilated place and a place that is as nearly dry as possible.

AUCTION SALE

Having rented my place, I will sell at public auction the following described property at my ranch one mile east of Leland, commencing at one o'clock on

Tuesday, Nov. 8

Livestock

- Bay mare, age 8, weight 1200
- Sorrel gelding, age 9, weight 1200
- Brown mare, age 10, weight 1390
- Brown mare, age 9, weight 1260
- Sorrel mare, age 11, weight 1200
- Buckskin geld., age 12, wt. 1100
- Two good milch cows
- Fresh Jersey-Guernsey cow, age 6
- 2 registered sows, wt. 250 each
- Registered sow, weight 250
- One shoat. 23 R. I. R. chickens

Machinery

- 3 inch Mitchell wagon

Riding cultivator

- Walking Cultivator
- 8 foot disc
- 5 foot Deering mower
- 8 foot Deering binder
- 16 inch Walking Plow
- Parker Bean Cutter
- P. & O. Bean Planter
- Keystone side delivery rake
- Bob sled 1 vise
- New International bean planter
- Chatham fanning mill
- 2 sets heavy breeching harness
- Tools of various descriptions
- Numerous other articles

Terms: All sums under \$20 cash. Over that amount approved note due Oct. 1, 1928, bearing 10 per cent interest.

Owed Reputation to Dante
Sordello, a Provençal troubadour, who lived from 1180 to 1255, owes his reputation chiefly to Dante, who mentions him eight times in his "Purgatorio." Nothing survives of his prose and only a few poems.

Great Jewish Scholar
Maimonides, a native of Cordova, Spain, who lived from 1135 to 1204, was the most celebrated Jewish scholar, writer and philosopher of the Middle Ages. He was chief rabbi of Cairo, where he probably died.

Increasing Demand for Higher Grade Products

The increasing demand for high-grade milk and dairy products makes it important that right methods of handling be observed. M. J. Prucha of the University of Illinois urges producers to keep the utensils, the barn, the cows and the milker clean. Don't depend on the strainer to remove the dirt, but keep dirt out of the milk in the first place. Feed wholesome feeds and don't expose milk to odors.

To improve the keeping quality of milk, keep down the number of bacteria. This is done first by keeping the cows clean. Then watch the pails and cans for they are the largest source of bacteria. Wash well and then steam or scald or sterilize with a chemical sterilizer.

Cool milk promptly at 60 degrees Fahrenheit. A-grade milk must be cooled to 50 degrees. Prucha finds that the man is the most important factor in the production of high-grade milk.

Dairy Calves Need Some Grain When Very Young

Calves under three months of age should not be made to depend on pasture grass, for roughage; feed some good alfalfa hay. As long as a reasonable amount of skim milk is fed, 12 to 15 pounds per head daily, on pasture the grain may consist of a combination of ground corn, oats, barley or kafir grains. There is no need for protein supplements from grain sources. The skim milk and grass supply plenty of good-quality protein and also mineral substance. A calf three months old getting skim milk and grass needs about 1 pound of grain to each 100 pounds live weight. Where skim milk is not available it is advisable to increase the protein content of the grain mixture by increasing the proportions of high protein concen-

trates. A good mixture may be made from 200 pounds each of ground oats and corn, 100 pounds bran, and 100 pounds of linseed oil meal.—Nebraska College of Agriculture.

Labor Involved at Silo-Filling Time Is Costly

One of the greatest objections which is raised against the silo is the labor involved at silo filling time. While it is definitely proved that this is labor well spent, yet some dairymen still continue to use it as an excuse. Two or three of the leading implement manufacturing concerns are now actively engaged in efforts to overcome this objection. One concern is developing a machine which will not only grind and chop all the feed desired, but which can also be transformed quickly into a silo filler which will do the job with the ordinary labor found on the farm. Another machine is cutting and chopping feed in the field, leaving it all ready to blow into the silo.

Cow Testing Favored

Not more cows but better ones will meet the increasing demand for milk. As a matter of fact, if we were to increase the production of the average cow only 100 pounds per year for the next 40 years we could supply our increase in population without increasing the number of cows. Cow testing has been in operation in this country for 20 years. When it is realized that some such method is the only one that will show results, it should be more generally used.

Live poultry sometimes shrinks as much as 17 per cent in weight while in transit to market.

Egg income constitutes 82.4 per cent of the total cash income in the light breeds and 63.8 per cent in the heavy breeds.

POULTRY FACTS

SELECTING BEST BREEDING STOCK

In your poultry houses dampness brings on a train of troubles. Old cobwebby places, dust, dirt and darkness are good conditions to create and perpetuate the breeding of mites. These parasites are insects that get on the birds at night and take out the life blood, leaving nothing for the layer but anemia and inclination to disease. These insects kill little chicks, pull down the vigor of the laying and breeding stock and take away the profits that you counted on.

Close, stony houses bring about a train of troubles to the flock. Overflow of drinking water should get quick attention by providing right drainage. All birds seem to have an aptitude for drinking from every foul puddle they see. Drinking from such places is likely to bring on disease. All founts should be placed high enough to prevent droppings or litter being scratched in.

The founts should be filled two or three times daily during warm weather, for the sunlight destroys the life of the fluid, and if left long enough in such condition it is positively harmful to the birds drinking from it. All water should be placed in shade. If

no trees or sheds are available, one can be made by nailing three sides of a box together, then adding a top to it. Such a contrivance should be high enough to allow the birds to drink freely when the fount is under the box.

Don't forget that moldy grain, mildewed bread, smutty corn, mildewed hay, for litter, sunburned or rotten potatoes, fermented mushes and pumpkin seeds are dangerous to the health of the flock. Unslaked lime, paint skins, nitrates of soda, salt in quantity, and vessels containing any disinfectants should be kept away from the poultry yard if you want to have health reign.

Plant food in commercial dried animal manures increased about 40 per cent in cost between 1914 and 1924, reports the New York experiment station. Its average cost today is 42.4 cents a pound, as compared with 10.5 cents a pound in mixed mineral fertilizers.

On the larger farms culling is carried on rapidly in the fall and the poor birds go to market by the crate.

There is no other fowl or stock that will deteriorate as quickly as turkeys with inbreeding. This is one of the great faults and the hardest lesson many have had to learn.

There are people who have the right variety of fowls, who house and feed them properly, and yet who can not obtain eggs early in the winter because their fowls are too old.

Alfalfa Stands Die Out Early

Bacterial Wilt Disease Is Cause of Trouble in Most Districts.

(Prepared by the United States Department of Agriculture.)

Many alfalfa growers have complained to the United States Department of Agriculture during the past three years that their stands of alfalfa now die out in three, four or five years where they once lived much longer. These complaints have come from many places, especially from the central and southern Mississippi valley, and also from some irrigated districts.

Bacterial Disease.

It is not always possible to name the specific cause of alfalfa dying out; in fact, there is often more than one cause operating. But as a result of the attention which these complaints have focused upon the alfalfa crop, one fact has become clearly apparent. There is in the United States a bacterial wilt disease of alfalfa which was not previously recognized. This disease, according to Fred H. Jones, pathologist of the department, is responsible for a great deal of the trouble that growers have experienced. Moreover, it appears that bacterial wilt, which now occurs in at least a few fields in practically every alfalfa-growing district of the United States, may easily become more thoroughly

disseminated than at present and thus in some districts develop into the most serious disease with which alfalfa culture must contend.

Organism Causing Disease.

The organism causing the disease enters the plant through wounds and passes downward through the taproot and upward through the stems. At length the entire plant may wilt suddenly on a hot day. Later in the summer some of the affected roots produce short, pale-colored, spindling shoots with small, narrow leaves. When the taproot of such a plant is cut across, the woody portion of the root is found yellow and discolored close beneath the bark. When the bark is stripped back the wood is found yellow or brown, altogether unlike the white wood of healthy plants. This discolored wood distinguishes the disease from winter injury and other troubles.

The bacterial wilt disease is now being studied by the department and state experiment stations to determine its distribution, how it is carried from field to field, when and through what kinds of wounds it most frequently enters the plants, and whether there is varietal resistance to the disease.

When you are feeding 20 pounds of alfalfa hay per day to a dairy cow she is getting as much digestible protein as if she were getting 18 pounds of bran.

No matter what pains are taken in clean milk production, there will always be some bacterial contamination.

Some Seasonable Fall Needs

Each season creates a demand for special drug store merchandise.

Fall Requirements Are

Rubber goods, chap lotions, face creams and powders, cough and cold remedies, handy household remedies etc. If you favor special brand of goods you will be sure to find them here, for we feature trade marked goods and advertised items.

Make a list of your fall needs and let us supply the goods in best quality.

Formaldehyde, Bluestone and 55 Per Cent Copper Carbonate

Influenced by Equinox

A line storm is an equinoctial storm—that is, a storm occurring at or near the time of an equinox, the time at which the sun crosses the equator, which is about March 21 and September 22.

Old Weapon of War

Halberd is the name of an ax with a pointed head and often much ornamented, fixed upon a handle five or six feet long. It was much used during the Sixteenth century by the foot soldiers of western Europe.

LIVE STOCK

KILL GRUBS IN HEAD OF SHEEP

There are subjects even to this day that none of us can fully agree upon. That this is a fact one need only look about, nevertheless I want to bring up an important question that affects at least one portion of our agricultural industry, and that is, grubs in sheep, writes H. W. Swope of Pennsylvania, in the Farmer's Guide. Ever since I was a boy, and that has been some years ago, I have been told that grubs in the heads of sheep can be successfully removed by cutting a disc of the bone over the nose, or nasal cavities of the sheep so treated. Then the grubs are taken out or they are driven out, as the case may be with the squirting in of some kind of liquid suitable or calculated to get rid of the grubs. Some say that the method is a good one, others say not. I have experimented upon sheep myself for the purpose of finding out if there is anything in this sort of treatment for grubs. In one case, I lost two sheep, then, in another, I believe, this method did remove the trouble. However, I am inclined to believe that such a method is at best inefficient.

I know several men who have practiced this thing for years, and then I know a young veterinarian who has successfully operated in the same manner upon more than one flock of sheep, for this annoying trouble is to be found in the best of flocks. Yet, it does seem to me that such an operation is more of a harm than the relief usually obtained.

The question is, whether it really does the work on a percentage basis high enough to warrant its continued use and practice, or is there a better way of removing grubs. Here is a chance for some young intelligent fellow to get busy and put his improved methods into use, preferably some one who is genuinely interested in sheep and their future possibilities, for at present the outlook for sheep raising is considered very good by most observers.

Rotation of Pastures to Control Diseases

The case of grazing animals presents certain special difficulties. They habitually soil their "table" with manure, insuring the prompt return to the body of the bacteria, worm eggs and larvae and other infectious agents passed in the manure. With sheep, experiments have shown that rotation of pastures or of different kinds of stock on the same pasture is an aid in the control of stomach worms, but it is far from being the effective control measure hoped for. Control of parasite diseases would go a long way toward solving the problem of losses among lambs. So far as sanitation is concerned, lambs should be given special preference in the matter of pasture. They should be placed on fairly dry hillsides—not on bottom lands—away from wethers and all older sheep except the mothers, wherever possible, and the mothers should be treated for worms.

Popularity of Silage for Feeding to Steers

The popularity of silage for steer feeding is increasing, especially since its use is becoming better understood. Through the growing period it can be fed to about the same extent as to dairy-bred animals of similar relative development, but with the approach of the fattening stage and its requirement for a more concentrated ration the grain is increased without a corresponding increase in the amount of silage fed.

The rate and economy of gains made by silage-fed steers justify the more general adoption of this feed for beef production, especially where pasturage is limited or uncertain. The same is true to a certain extent with sheep. Moderate feeding is the rule and more careful regard to the quality of the silage.

Little Difference in Quality of Tankage

The Missouri station has fed a large number of different brands of tankage but has never compared them in an experimental way. Observations of the use of tankage from various sources, however, has shown no apparent differences in the different brands of these 60 per cent protein packing-house products. In purchasing tankage, then, the important consideration is its protein content and it is our opinion, says a writer in the Missouri Farmer, that there would be little if any difference between tankage put out by different companies so long as they all contained the same amount of protein.

Packing Industry Site

The packing industry, in the interest of economy, moves to localities where its raw material—live stock—is most readily available. The relations between the freight rates on pork products and live hogs is influential in determining the location of packing centers. Freight rates on hogs have advanced from 40 to 85 per cent above prewar levels. The ease of shipping dressed meats as compared with shipping live animals is another factor.

CHELAN goes to work for YOU

AFTER 18 busy months of planning and building, the first generating unit of the Chelan power project has been put to work in the interests of Electric Service in the Inland Empire.

Conceived, constructed and dedicated for public service, this power station is now open for general inspection by citizens of this territory at their earliest convenience. When completed, the Chelan plant will have a total output of 128,800 h. p., increasing the total generating capacity of this company's properties by 68 per cent.

The 6 1/2% Cumulative Preferred Stock of this company is a sterling investment. Write for details. A new "Chelan Power" folder is now ready—ask for it.

The Washington Water Power Co.

Sell the New **CHELAN PROJECT** open daily to the public.

Sanitation in the houses and runs aids in the control of certain diseases among poultry.

Nests under the dropping boards save space, but take light from the back part of the floor. They make it impossible to observe the fowls properly, are less sanitary and make it more difficult to gather the eggs.

Many people do a lot of figuring to show the increased profit that would come by breeding birds that are heavier producers but they fail to make any additional charge for feed.

Not only is oatmeal used for poults, but at all times during the growing period and for wintering.

The average poultry man usually makes more money by marketing his surplus males as broilers than as capons.

There is nothing that will thrive in hot weather any more than lice and mites. Don't let them get a start. Keep the brood coops well cleaned and sprayed with some good lice killer or disinfectant.

LOCAL NEWS

Mr. and Mrs. L. J. Herres visited relatives in Lewiston last Sunday.

Mr. and Mrs. Ernest Randall of Peck visited at the home of Mrs. Randall's mother, Mrs. N. C. Thomas the first of the week. From here they left in their car for California where they expect to locate.

Al McKee of Lapwai was transacting business here last Saturday.

Mr. and Mrs. Hugh Thompson and two children arrived the first of the week from Pullman. They recently purchased the A. C. Deeter residence here and are now nicely located. Mr. Thompson has taken active charge as cashier of the Kendrick State Bank.

Dr. and Mrs. Moorhead were Moscow visitors Tuesday afternoon of this week.

Mr. and Mrs. H. P. Hull were called to Spokane, Wednesday, on account of the death of Mrs. Hull's brother, W. F. Leslie, who passed away Tuesday night. Mr. Leslie was house manager for Holly-Mason Co. He is survived by five children.

Nothing but routine business was transacted at the regular monthly meeting of the town council last Tuesday evening.

Bunstein & Schoeffler will hold a public sale at the Otto Schoeffler place near Cameron, Saturday, Nov. 5.

Bob Spencer of Moscow was in Kendrick, Tuesday. While here he took advantage of the open season on Chinese pheasants, returning home in his car in the evening.

The Misses Mary and Nannie Weaver spent the week end at the Keene and Aas homes on Bear ridge.

Mrs. N. Brocke and son, John, went to Spokane, Wednesday morning, on business.

Two cases of infantile paralysis and three cases of scarlet fever were reported in Moscow recently. It is believed that the recent death of a Moscow child was due to infantile paralysis.

The recent rains are not welcome to the farmers in this vicinity. There is much seeding to be done but the fields are too wet at this time for any kind of fall work. Many farmers have their ground ready to plant and are hoping that the rains will cease for a period until the seeding is finished.

Deputy Sheriffs Moody and Jordan of Moscow were in Kendrick yesterday on business connected with their office.

Mr. and Mrs. W. B. Helpman went to Lewiston, Thursday, to visit their son, Hugh, and daughter, Mrs. Gregory Eaves.

Mr. and Mrs. Wm. Woller and son, Fred, left last Saturday for Los Angeles to spend the winter. They visited at the home of Mr. and Mrs. Frank Ellis while here. Mrs. Ellis is a daughter of Mr. and Mrs. Woller.

The Kendrick teachers left this morning for Lewiston to attend the teachers' district meeting to be held there today and tomorrow. Schools will be closed today.

Mr. and Mrs. E. W. Lutz of Lewiston were Kendrick visitors last Saturday. Mr. Lutz attended a meeting of the directors of the Kendrick State Bank.

Mrs. Jack Curry arrived yesterday afternoon from Mohler to visit her sister, Mrs. J. G. Gardner.

Rev. Coberly of Oakesdale visited at the home of Mr. and Mrs. N. B. Long the first of the week. He was pastor at Leland over twenty years ago when Mr. and Mrs. Long were residents of that community.

A packed house witnessed the Tunney-Dempsey fight pictures at the New Kendrick Theatre last Wednesday evening. After seeing the pictures there were many who still contend that Dempsey really won the fight. The writer is still of the same opinion—the man who got the million dollars won.

W. H. Bond of Leland will hold a public sale at Leland next Tuesday, starting at one o'clock. He will dispose of his farming equipment at this sale.

The majority of hunters who took advantage of the opening day of the season on Chinese and Hungarian pheasants, report rather light bags. No one in town secured the limit of four "Chinks" or a mixed bag of six. Birds do not seem as plentiful this season as usual, probably due to the cold, wet weather during the hatching season last spring.

C. T. Lewis, who held a farm auction last Saturday, reports that his sale went considerably better than he expected. He had a big crowd and got good prices for his stuff.

Lest you forget, we wish to remind you that this is the time of year that your subscription to the Gazette probably falls due.

Southwick News

Miss Martha Abitz visited at the home of Mr. and Mrs. Henry Brammar Friday and Saturday, of last week.

Jake Berriman, Homer Hayward, Wm. Stump, Henry Brammer and Math Kazda made a trip to Oakesdale and back last Monday.

Mr. and Mrs. Russell Rodgers spent Sunday at the home of Clarence Hewett.

Jake Berriman and family spent Sunday at the home of his father in town.

Floyd Russell and wife and Mrs. Elton McCoy were Kendrick visitors Tuesday afternoon.

Mrs. Jim Johnson Mrs. Atlee Mustoe and Mrs. Edna May were callers at the Ben McCoy home Wednesday afternoon of last week.

Miss Gertrude Baker was an overnight guest of Mrs. Glenn Betts, Saturday night.

Miss Nadine McCoy was an over night guest of Miss Helen Jennings in Kendrick Saturday night.

Tom Armitage and family spent Sunday at the home of Darl Wright.

Russell Baker and sister, Miss Gertrude, spent Sunday evening at the home of their aunt, Mrs. Darl Wright.

Cameron News

Well, it's no use to talk about the weather; whenever the sun shines everyone is hopeful of "a chance to finish up the fall work" and, every time it rains, there's talk of selling out and quitting.

Miss Anna Wegner of Spokane is here visiting relatives and friends for a few days.

The following were Lewiston visitors this week: Rev. and Mrs. Rein and little daughter, Mrs. Spekker, George Ehlers and daughter and Mr. and Mrs. Kruger.

The Luther League met at the home of Rev. and Mrs. Rein last Sunday.

Mr. and Mrs. Fred Sillow, Sr. returned from a visit to Chicago

and other eastern cities. Grandpa Ehlers is able to be out of bed and can walk around a little bit.

Carl Wegner and some of the Wegner boys, motored to Culesae Sunday. They report of having had several punctures on the way.

There will be an auction sale on the Otto Schoeffler place Saturday. The Cameron Ladies Aid will serve lunch.

The candy committee of the Ladies Aid met at the Blum home to make candy Sunday afternoon.

Mrs. Herman Wilken, Sr. is reported as improving. She now has both cast and braces removed from her limb.

Carl Wegner is putting in new cement walks.

Mrs. Henry Meyer visited at the Carl Wegner home last week.

Are you in need of letterheads or envelopes? If so, try the Gazette for a good job.

'Ole, The Swede' Coming Here

The Val Howland company, a traveling road show, will appear at the New Kendrick Theatre next Wednesday night, November 9, in "The Galloping Swede" This company has played here several times before and has given a splendid performance. The play they present this time is said to be a scream from the start to the finish. So remember the date and bring the family. See advertisement in another section of this issue.

Presbyterian Ladies Aid Sale and Tea.

The ladies of the Presbyterian Aid will conduct a tea and sale of their needle work on November 19. The work will be on display at the Commercial Hotel at one o'clock. There will be numerous useful articles and many pretty Christmas suggestions. The public is cordially invited to attend the tea and inspect the work.

How about that printing job? Don't wait until you are clear out, bring it to the Gazette Office now. Prompt service
