

## JUST IDAHO

By Guy Flenner

### Idaho's Oiled Roads

A few words about our highways, which are used by practically everyone if we judge from the crowded state of autos in a state every sixth citizen of which owns a car. That renders the subject of highways one of universal interest and concern.

We started in with dirt roads. Then we put on gravel. We are still in the gravel age mostly with our 4000 miles of state highway, but oiled stretches are reaching out to increased distances every year. This year substantial gain has been made in the oiled mileage, but, what is more important, material advancement has been made in the character of the work. It was expected there would be much the same experimentation here that characterized oiling in other states. While we took advantage of their mistakes and made application of their best methods insofar as they could be applied to our conditions, it was found that the various units in a state of such vast expanse and furnishing so many different conditions of soil and drainage required modified treatment at least as to elemental work. So far as surfacing is concerned the prevailing method is much the same at all points, and the results are highly satisfactory.

Other states have been watching Idaho oiling. Oregon has a sad experience with the straight sprinkling system and her experts have concluded, after riding the Idaho oiled sectors extensively and noting the work here for months, that the Gem state plan is superior. Many hundreds of miles of Idaho system will be installed on Oregon roads.

### Why Costs Vary

The cost of oiling varies with local conditions as does the duration of construction. A record was made in oiling what is known as the desert road, between Caldwell and New Plymouth. A measured distance of 23 miles, the work was completed in 26 days. Moreover a saving of around \$800 a mile between estimated cost and actual cost was effected. Still in more or less of an experimental stage, oiling cost cannot be closely estimated. It is gratifying to know that economy and efficiency are handmaidens in this work. The desert saving alone over estimated cost represents over \$20,000.00.

The oiled sections are declared by highway engineers from other states to be as near perfection for the most part as has been attained anywhere in the Union. Measured by the cost of maintaining dirt or graveled roads, the oiled highways will pay for themselves, as to cost of oiling, in three to five years, speaking broadly. Measured by the cost of operating cars they will pay the public in much less time in tires and mechanical repairs.

### Subject of Maintenance

The question is as to maintenance. These oiled roads are as well constructed as possible under the best known methods. They will have to be patched here and there, but the extent of repairs depends more upon the users than upon the builders.

Heavily loaded trucks and motor busses have been declared to be beneficial to dirt and graveled highways because of the smoothing effect of broad tires during dry weather. The damage during the muddy season, however, has been great. This is also true of lighter cars that bounce with shimmy-like regularity and toss gravel from the road in summer time and gouge it full of holes during rainy periods.

### Prime Causes of Damage

With oiled roads, however, the greatest damage apparently is done by fast moving vehicles carrying heavy loads, such as trucks and busses, notably the latter, which are operated at a rapid speed. The writer has followed motor busses for miles and found it necessary to drive at 40

## Accident on Grade

Harry Langdon lost a fine horse last Friday afternoon while hauling a load of grain down the Wilcox grade on American ridge. The brake beam of his wagon broke on a steep pitch and the heavy load was more than the horses could hold. One of the wheel horses fell and was dragged quite a distance over the rocks. It was believed one of the bones in its hip was fractured. The wagon tongue was also broken, but fortunately the front wheels were turned into the bank and the wagon brought to a standstill. Mr. Langdon jumped from the wagon and was not injured.

It was necessary to shoot the horse, the carcass of which was taken to the flat below the Compton place to be burned. Sparks from the fire started a grass and brush fire on the hillside across the creek. It took several hours of hard work to get the flames under control. It was evidently Mr. Langdon's unlucky day.

## Seize 180-Gallon Still, Rye

One of the largest stills ever found in north Idaho was captured Monday near Clarkia and brought into this city Monday night. Fifteen gallons of rye whiskey and 180 gallons of mash were captured together with the still itself which would hold 180 gallons.

The owners observed the approach of the officers and fled in a car, but shipping tags revealed their identity and warrants were sworn out Tuesday for their arrest. The property in which they made the moonshine was not rented to them, according to the owner who claimed he did not know anyone was occupying the place.

## Back Broken in Fall

Wayne Candler, Clearwater Timber company employe at Big Island who broke his back when he fell from a flume last Monday, is reported considerably improved and he will eventually completely recover, according to word given out at the Orofino hospital.

Candler was working over an open flume with the timbers that had become jammed slightly in the flume. When one of these rose up in the water to strike him he dodged and fell from the structure to the ground, a distance of only six feet.

With no time to determine the distance of the drop and dodging as he was, Candler struck the ground in such a way that his back was snapped.

## Tennis Club Played Sunday

Five of the regulars of the Kendrick Tennis Club and two from Moscow held a meet on the local court Sunday afternoon. Following is a list of teams and scores:

Ramey and Gardner defeated Bob Snyder and Frank Candee 6-3, 6-3, 6-2, 4-6.

Gardner and Blevins defeated Ramey and Boyd 6-3, 6-3.

Candee and Snyder defeated Blevins and Thomas 6-1, 6-3.

Blevins and Thomas defeated Candee and Boyd 6-3, 6-2.

Ramey and Thomas defeated Candee and Snyder 6-3.

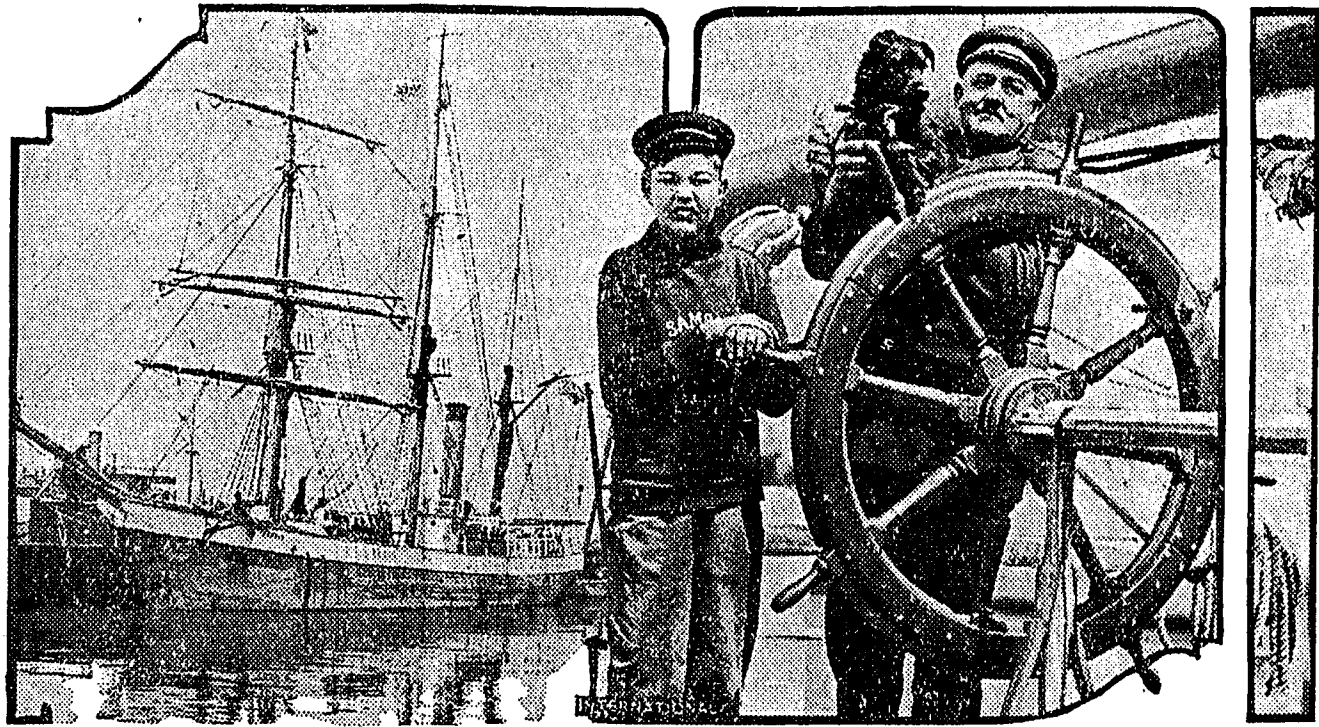

A large crowd witnessed the play which was interesting.

The local team goes to Moscow next Sunday for return game.

to 50 miles an hour to keep up with them. The wide tires—many double-tired—exercise a powerful suction effect upon the oiled surface, and it is a question how long any oiled road will stand that sort of strain.

Especially damaging are the effects of hard rubber tires, which have been barred in most states and should be in Idaho. This state cannot afford to invest so heavily in oiled roads for the comfort and convenience of the auto public and permit a comparatively few vehicles to break them down in a short time. Every hole made by a hard tire, be it remembered, is enlarged by every succeeding vehicle of whatever type.

## Byrd's South Pole Mother Ship Comes From Norway

The three-masted barkentine Samson, which will be used as the mother ship by Commander Byrd's Antarctic expedition, photographed at Brooklyn on its arrival from Norway, and Captain D. G. Dedrick, its commander, with his fifteen-year-old son Otto.

## Whitman-Latah County Fair

Everything is in readiness for the opening of the Whitman-Latah County Fair at Garfield, beginning Wednesday, August 29th.

Saturday, September 1, has been designated as Inland Empire Day when any mutt dog on the end of a four foot six and one-half inch rope will serve as a pass onto the exhibition grounds to any youngster presenting same at the gate. Every mutt dog is eligible for the grand stand show with liberal prizes offered for the muttiest of the mutts.

Wednesday will be Moscow and Latah Day with the Moscow and Troy bands leading a large parade of floats. Thursday, Pullman will close up shop and send a large delegation to the Fair. Friday is a legal holiday for Palouse City folks, and Colfax folks will be accompanied by Allen's Pep Band.

Entries in all breeds of livestock have been received insuring the greatest livestock display ever held in the Palouse country. Entries in the beef cattle division have been made by Scollard of Chehalis, Broughton of Dayton, McCroskey, Trimble and Wride of Garfield, University of Idaho and Washington State College. Dairy cattle have been entered by the Northwood farms of Seattle, Chas. Sawyer of Palouse, E. Boller of Potlatch, and Lenhard and Hodge of Colfax.

Floyd Fox of Silvertown, Oregon and Roy Taylor of Robinson Illinois are both coming with a carload of sheep. D. F. Burge of Albany, Oregon; Henry Merritt of Rosalia; R. C. McCroskey of Garfield, W. M. Divine of Elberton, and Chas. Sawyer of Palouse are among the leading horsemen who have made large entries. The swine division is larger than ever before with Kammerzell & Son of Colfax, A. P. Johnson & Son of Palouse, Chas. Sawyer of Palouse, W. F. Wilhelm of Colfax, Joe Hodge of Colfax, and Earl Harper of Johnson, entering their herds. "Pills" Dix, who has a national reputation in the poultry world, states that the poultry division has more outside entries than ever before. Something of the artistic will be in evidence at the flower show according to Mr. T. S. Herman. Geo. Arland, Manager of the speed department reports more than 40 race horses entered for the daily racing program.

Zerado's Circus Revue has been contracted from the Ringling Bros. Circus to furnish free grand stand attractions daily in addition to the Lavett-Brown-Huggins carnival show that will be on the grounds the entire time. The Fair pavilion will be open each evening for dancing.

## Open New Barber Shop

Earl Kulick has rented the room next to the postoffice and will open a barber shop the last of this week or the first of next. The building is being refinished inside and will be put in first class condition.

## Death of Dave Rowlands

Word was received here yesterday afternoon that Dave Rowlands of Sandpoint had passed away at the Deaconess hospital in Spokane yesterday morning. Funeral services will be held in Coeur d'Alene Saturday morning at 10 o'clock. A Masonic funeral will be held at the grave.

Mr. Rowlands was well known in this community having conducted a furniture store here in the early days for many years. He left Kendrick about 15 years ago.

Mr. Rowlands is survived by his widow, a son and daughter. Both children are now in Honolulu.

## Big Bear Ridge News

Mr. and Mrs. A. W. Jones and daughter, Miss Agnes, were called to Spokane by the illness of Miss Dorothy, who is at the Edgecliff Sanitarium.

Robert and Grant Clemenhagen have gone to Agawam, Montana, for the harvest season.

Mr. and Mrs. Wallace Emmett and sons, Roy and Homer, drove to Greer, Idaho, to visit with Mrs. Emmett's brother, Frank Gilkey and family.

Mrs. Ole Lien returned home Wednesday from the Potlatch hospital and is recovering from her recent operation.

The Deary and Bear Ridge Lutheran Sunday schools will hold their annual joint Sunday school picnic at Bear Creek near Deary, Sunday, August 26th. A cordial invitation is extended to all.

Mr. and Mrs. Thorvald Nelson and Mrs. Peter Hesby drove to Coeur d'Alene and spent the week end with Mrs. Nelson's aunt, Marit Vognild. Miss Christine Torstad of Spokane accompanied them home for a visit.

Mr. and Mrs. Pete Halseth and children of Deary were Sunday visitors at the Ed Halseth home.

## Entertained at Bridge

Mrs. George Leith entertained at a bridge party Thursday afternoon at two o'clock. The living room was attractively ablossom with summer garden flowers. The guests enjoyed several hours of playing, after which the hostess, assisted by her daughters, served dainty refreshments.

## Suspended Animation

Practically all threshing crews of this section will be tied up for the next ten days to two weeks awaiting the ripening of the spring grain, most of which is still too green to be cut. Practically all of the fall grain has been taken care of in this immediate section of the country and the general yield has run from 25 to 35 bushels per acre, most of which is of an excellent quality. Some yields running as high as 50 bushels to the acre.

The spring grain is as yet an unknown quantity. — Genesee News.

## Entertained at Bridge

Mr. and Mrs. Walter Thomas entertained at a four table bridge party Saturday evening last. The guests were Mesdames and Messrs. Morehead, Carroll, Herres, Ramey, H. Thomas, Barnes, Leith and G. P. Anderson of Potlatch. After several hours spent playing bridge the hostess served a delicious two-course luncheon. Later the scores were totaled and it was found that the Carrolls held high honors.

## Expensive Water Melons

It is reported that three Kendrick youths drove to a melon patch below Juliaetta one night this week. After securing 35 or 40 melons they were about ready to return home when the owner of the patch appeared on the scene. The situation reeked with tragedy. They were caught red handed with not an alibi in sight.

The owner of the melons was very reasonable. He allowed the young men to pay for the melons, fixing the price at \$45. A few more like incidents will make melon stealing an unpopular pastime.

## Fined for Killing Grouse

C. H. Wright, who lives below Juliaetta, was fined \$25 and had his double barreled shotgun confiscated by E. C. Collins, deputy state game warden for Latah county. He was brought before Judge Hull in Kendrick, charged with killing a grouse in Latah county. He pleaded guilty to the charge and was given the minimum fine with costs amounting to \$1.25. The season is closed on grouse in Latah county.

## Crescent Clippings

Mrs. Andrew Dorendorf and grandsons, Ted and Floyd, and Mrs. Alfred Swanson visited Wednesday with Mrs. Bill Dorendorf.

Sue Robeson returned home Saturday from a visit with her sister, Mrs. Arthur Anderson of Agatha.

Alice Cramer returned Monday evening from a short stay with her sister, Mrs. LeRoy Southwick of Cream ridge.

Bert Lesa left Tuesday for Portland after a short visit at the Axel Ekman home and at his homestead on Three Bear.

Visitors at the Wm. Dorendorf home Monday were Mrs. Mike Forest and daughter, Ida; and Mrs. Axel Swanson and daughters, Esther and Gloria.

Mr. and Mrs. Edw. Darby and family visited at the John Darby home Sunday afternoon.

Mr. Harris of Kendrick is working on the Crescent school house this week. He will put on new shingles and paint the building.

Mr. and Mrs. Walter Thomas have rented a residence in Lewiston for the winter and moved their household goods there this week.

## THE STATE WE LIVE IN

By Byron Defenbach

### Rivers

"Rivers that move in majesty, and the complaining brooks that make the meadows green."

(Bryant's "Thanatopsis")

### Clark's Fork of The Columbia

Formed by the junction of the Flathead and Missoula Rivers in western Montana, the Clark's Fork has its original sources on the western slope of the continental divide; it drains the western portion of the Glacier National Park, and the Bitter Root valley. Its current is harnessed at Thompson Falls and generates power for use of the Milwaukee railroad.

Shortly after entering Idaho near the town of Clark's Fork, the river swells out into Lake Pend O'Reille. This lake is Idaho's greatest body of water; it is the second largest fresh-water lake in the Rocky Mountain system, being exceeded only by its own tributary, Lake Flathead, in Montana.

The channel leaves the lake at Sandpoint, after passing under the longest wooden bridge in the world. From here on the river is known as the "Pend O'Reille." It sports dangerous rapids at the mouth of Priest River, and has a short drop at Albeni Falls, after which it passes through eastern Washington into the Columbia. In normal volume, Clark's Fork is about one-half the size of Snake River.

### The Salmon and The Clearwater

These beautiful mountain streams, tributaries of the Snake, have an interesting distinction. They are respectively the longest rivers in the United States whose channels are entirely within one state. That should be worth remembering.

The Salmon rises in the Sawtooth Mountains. It is occasionally navigated downstream by specially constructed boats, and passes through remote regions. It is usually considered the dividing line between "Nothern" and "Southern" Idaho.

The Clearwater has great historic interest. Its valley formed one of the routes of the Lewis & Clark expedition and of the famous march of Chief Joseph in the Nez Perce War of 1877. This route, following the Clearwater and its tributaries to the summit of the Bitter Roots, thence down Lolo Creek to its mouth near Missoula, Montana, is known as the "Lolo Trail."

### Death of Harvey Roberts

Harvey Roberts, son of Mr. and Mrs. John Roberts, former residents of American ridge, passed away at the Sacred Heart hospital in Spokane, Wednesday evening, according to a report received here yesterday. He is survived by his wife, his father and mother and two sisters.

### Auction Sale Sept. 4

Walter McCall, who is farming near Leland, stated yesterday that he would hold a public auction at his place September 4. He will sell off his livestock and farm equipment.

### Let Him Shoot

A keen-eyed mountaineer led his overgrown son into a county school-house. "This here boys arter larnin'," he announced. "Whats yer bill o'fare?" "Our curriculum, sir, embraces geography, arithmetic, trigonometry," "That'll do. Load him up well with the triggerometry. He is the only poor shot in the family."

### Their Mistake

"What on earth are you two fellows doing walking so slowly up these steps?" asked a woman. "Why we're working lady," replied one of the men. "We are carrying this desk into the house." "What," gasped the woman. "I don't see any desk." "Well, my gosh, fellow," ejaculated the man turning to his helper. "We have forgotten the desk."—Ex.

#### Cameron News

Mr. and Mrs. Chas. McCoy and daughter were Wednesday evening visitors at the F. W. Newman home.

Dr. VanWert papered the parsonage this week.

Geo. Finke is staying with his sister, Mrs. Geo. Wilken.

Mrs. Tietz and son, Paul, and daughter, Martha, and their families returned to Mullan after spending several weeks visiting with relatives.

Mr. and Mrs. F. W. Newman and Bernard Hartung were Cavendish visitors Sunday evening.

Mr. and Mrs. A. W. Schultz and daughters drove to Lewiston and back Tuesday.

Henry Schmidt, Walker Palin and Mr. Miller drove down from St. Maries Sunday and spent the day with relatives.

Mr. and Mrs. Harry Thompson and children of Lewiston, Mr. and Mrs. Chas. McCoy and daughter and Mr. and Mrs. Fred Schoeffler and children were Sunday visitors at the Wm. McCoy home.

Mr. and Mrs. Fred Mielke and sons, Mr. and Mrs. F. W. Newman, Mrs. Stoneburner, Miss Emma Hartung and Miss Louise Schmidt spent Sunday at the John Schwarz home.

Henry and Bill Bleck spent Sunday at Lewiston with their mother.

Fred Mielke and Fred Silflow drove to Juliaetta Sunday. They returned with a load of watermelons.

Marie Schwarz spent Tuesday and Wednesday with Mrs. F. W. Newman.

Hilga Ehlers spent several days last week with Mrs. A. W. Schultz and with Mrs. Charley Schultz.

Mr. and Mrs. A. O. Wegner spent Sunday with Mr. and Mrs. Fred Silflow, Sr.

Louise Schmidt stayed with Selma Hartung several days this week.

#### Linden News

Mr. and Mrs. Joe Perry and children of Troy and Mr. and Mrs. W. M. Sadler and daughters were picnicking near Orofino, Sunday.

George Smith left Saturday for Canada to work in the harvest fields.

Cleve McPhee and Fred Zimmerman, who are loading lumber in Kendrick, spent Saturday evening and Sunday with home folks.

The party given at the Community hall, Saturday evening, in honor of Miss Sarah Sweeney, was enjoyed by all present. After playing games in which parents and former pupils participated refreshments of ice cream and cake were served.

Mrs. Edgar Bohn and Mrs. George Garner called on their mother Monday afternoon.

Mrs. Carr spent Sunday with Annie Morrison.

Mertie Stone and daughter, Evelyn, spent Tuesday at the Smith home.

Reading that a popular bathing suit at the Barritz is composed of "charming bright blue shorts with a white silk top," Ben Hibbs explains in the Arkansas City Traveler that shorts are worn at the Barritz but elsewhere they are eaten by cows. Presumably the "White silk top" keeps them from getting down to the calves.

Customer: I want a pair of spec-rimmed hornicles—I mean sporn-rimmed hectacles—confound—I mean heck-rimmed spornacles. Shopwalker: I know what you mean, sir. Mr. Perkes, show this gentleman a pair of rim-sporned hectacles. —Tacoma New Herald.

#### So Upset

Puffing like a steam engine, cursing his folly in allowing himself to grow fat, an old gentleman ran wildly thru a pasture. He was trying to get his life over the fence from the infuriated bull which was chasing him. At first it seemed that the old gentleman would never be able to make it, but with a last burst of speed he got to the edge of the pasture and tumbled over the gate in the nick of time as the bull pawed the ground on his side of the fence. For a few

minutes the old gentleman sat still, gasped for his breath, shook his fist at the thwarted animal. "You brute," he sputtered apologetically, "I've been a vegetarian all my life."—Ex.

M. E. Church Notice  
L. E. Taber, Pastor  
Rev. Weatherby will preach Sunday evening at 8 p. m. You are welcome.

## DAIRY FACTS

### DAIRYMEN SHOULD DIVERSIFY FARMS

In a study of dairy farms in the Chenango Valley region of New York state, it is proved that it is dangerous for dairymen "to carry all their eggs in one basket," said J. C. Neethling of the agricultural economic department at the New York State College of Agriculture.

"Farmers who rely on dairying alone make smaller labor incomes than farmers receiving part of their incomes from crops and poultry. Cash crops may cause losses in years of unfavorable yields or low prices, but over a five-year period farms growing cash crops gained by it. Farmers deriving less than 10 per cent of their income from crops made a labor income of \$233. Those deriving more than 25 per cent from crops made \$1,447 labor income.

"It is important also to get a large quantity of milk from each cow. The higher, the production the lower the cost of milk and the better the labor income. Pure-bred herds produced better than grade herds but the cost of maintaining them were higher and the labor incomes therefore were smaller.

"Whatever business a person follows, he usually has the impression that the other man does better in another business," Mr. Neethling said. "However, a comparison with fruit farms in Niagara county shows that the Chenango valley farmers receive a labor income averaging \$585 while the labor income on fruit farms was \$286. Comparing again 121 up-state poultry farms and 114 Chenango valley farms tilled in 1925, it was found that dairymen made \$1,099 labor income and poultrymen \$1,654."

### Silage Most Succulent Feed for Dairy Cattle

Silage is the best succulent feed for dairy cattle. Silage makes possible the feeding of a relatively cheap succulent feed which can be furnished during any period of the year.

The high moisture content of silage causes it to be relatively low in food value, and low in protein content, but is a good carbohydrate feed. Silage is equal to roots and green crops as a feed, and is much cheaper because it requires less labor. One of the most important essentials of silage is its effect on the digestion of the cow, which can be said to be excellent, and it does not harm the teeth of the cow. The average cow should receive 30 to 40 pounds of good silage each day.

Legume silage including alfalfa, sweet clover, soy beans, field peas, etc., is of fair quality. It is usually best to cure the legumes for hay, but if the weather does not permit of this, or if no other crops is available for silage, the legumes may be used to good advantage.

### Right Richness of Cream Secured From Separator

Adjust the cream screw of the separator so as to secure cream testing about 35 to 45 per cent fat. Low-testing cream sours and spoils more rapidly than high-testing cream, so that by the time it reaches the creamery it is often in condition unfit to be made into good butter. In the spoiled and curdy condition, it also makes difficult accurate sampling and testing. It is undesirable further, because it diminishes the amount of skim milk available for the feeding of calves and pigs; it increases the cost of transportation for every pound of butterfat shipped; it makes impracticable the use of a reasonable amount of starter in the creamery, and starter is essential for the production of the best quality of butter; it does not churn out exhaustively and yields an excessive amount of buttermilk, augmenting the loss of fat and thereby reducing the churn yield.

### Dairy Notes

Feeding the dairy calf requires care and judgment, especially the first month of its life.

The robber cow—the unsuspected bandit of the herd—is the dairyman's most serious competitor.

Dairymen who feed high protein feeds may add more fertility to the soil through manure than is taken out by crops.

Is your cream separator losing money for you? The best way to answer this question is to have a sample of the skim milk tested for butterfat at your local creamery or cream station.

### Sunlight Tonic

A good and cheap tonic is a glass of water which has been exposed to the sun for ten minutes. You will be drinking sunlight absorbed by the water.

### Ancestral Pride Justified

It is the highest of earthly honors to be descended from the great and good. They alone cry out against a noble ancestry who have none of their own.—Ben Jonson.

#### Good for Goldfish

Water in the goldfish bowl will remain fresh and healthful for three months or so by placing a chunk of special chemical rock at the bottom, says Popular Mechanics Magazine. About half a pound to a gallon of water, is the proper proportion. The rock absorbs various impurities and produces the effect of an attractive grotto in the bowl.

#### Remember This

Every law that is too stern defeats itself. It is the nature of man to stuff himself in proportion as he has been kept empty.—Los Angeles Times.

#### Radio Used by Surveyors

The radio has been used recently in various surveying work, notably in Alaska. In order to determine the longitude of a place it was formerly necessary for a surveyor to have an accurate chronometer, from which he knew the standard time. Now, if he has a radio set he can pick up the time signals from the larger radio stations, especially the Arlington signals.

#### Picture Wires

Pictures should be hung by two wires hanging vertically from the outside edges. A triangular hanging detracts from the picture.

# The DAIRY

## AVERAGE OHIO COW PAYS SMALL MONEY

Owners of average Ohio milk cows are accepting a net profit of 45 cents a year or less, on each cow, whereas they might as well be receiving at least \$84.80 a year. The dairy husbandry department of the Ohio State university estimates the average annual butterfat production for all the cows in the state at between 100 and 180 pounds. Records of costs and profits from several hundred members of cow testing associations of the state show that the average cow giving 200 pounds of butterfat during the year returns her owner a net profit of about 49 cents.

If the owners of these cows adopted improved and practicable methods of feeding, management, culling, and breeding, their returns might as well average \$84.80 a cow—the figure for the cow which produces 400 pounds of butterfat a year. It would mean more money spent for feed and upkeep, but would return a greater net profit, to adopt these practices, it is shown in the records from the cow testing associations. The average 200-pound cow in the association cost \$73.77 for feed, and \$132.46 for her entire upkeep. The average 400-pound cow cost \$95.14 for feed and \$173.04 for upkeep total, which included feed cost. But the 200-pound cow's product was worth only \$132.95 and the value of the product from the 400-pound cow was \$257.84. Hence the difference.

General farm conditions, under which the average yield of butterfat

for the state is less than 200 pounds per cow, are perfectly suitable for the cow which will give 400 pounds of butterfat, according to members of the dairy husbandry department of the university, and the practices and methods which will bring about the increased yield are perfectly practicable.

There were 2,431 cows in the cow testing associations of the state in 1927. The records kept by the owners in the associations show that the cow which gave only 150 pounds of butterfat during the year cost her owner \$28.40 instead of returning any profit at all. The cow which gave 250 pounds of butterfat returned a profit of \$20.37; the 300-pound cow paid \$44.22; the 350-pound cow paid \$63.15; the 400-pound cow paid \$84.80; the 450-pound cow paid \$110.90; the 500-pound cow paid \$121.88, and the 550-pound cow paid \$135.17.

Of the 2,431 cows whose records were kept and analyzed, 3.16 per cent were in the 150-pound class; 9.6 per cent were in the 200-pound class; 16.4 per cent in the 250-pound class; 23.2 per cent in the 300-pound class; 21.8 per cent in the 350-pound class; 12.8 per cent in the 400-pound class; 7.9 per cent in the 450-pound class; 2.7 per cent in the 500-pound class; 1.6 per cent in the 550-pound class.

The 300-pound group, which was the largest, paid \$44.22 a year on their board bill, and the 350-pound group, which was the next largest, paid \$63.15. These two groups included 45 per cent of all the cows in the association herds. For the 300-pound group the feed cost was \$80.86 for the year, the total cost of upkeep was \$150.11, the value of the product was \$194.33.

In all groups the cost of feed and the total upkeep cost rose with the increased production, but the value of the product rose more rapidly than these factors, with the result that the more money spent on feed and upkeep returned a greater proportional net profit at the end of the year.

### Dairy Hints

The small or delicate calf should be fed the smaller amount and if the milk is of high test less is required.

Overfeeding is one of the worst dangers in rearing calves. This can be avoided if the calf is kept just a little hungry.

Hand feeding usually starts when the calf is two to four days old, the amount fed varying from six to ten pounds daily.

A four-week-old calf will eat a little grain and nibble at hay, making it possible to start the change from whole milk to skim milk. The change should be gradual, requiring at least a week.

If a herd bull is a scrub he represents 100 per cent of the inheritance of the calf crop, for all his calves will be scrubs.

Sometimes milk will appear to be poor in fat due to a difference in the coloring matter, but if tested, it will be found all right.

## Garden Tractors Found Excellent

### Great Labor-Saving Machine, Displacing Man and Horse Labor.

The garden tractor is a thoroughly trustworthy and intensely practical machine, and deserves the attention of vegetable growers who are looking for a way to cut production costs. That is the way D. B. Lucas of the agricultural engineering department, New Jersey state college of agriculture, Rutgers university, evaluates the device which has been on the market but comparatively few years.

#### Great Labor Saver.

In a statement for New Jersey farmers he says that the garden tractor is a great labor saving machine which displaces both man and horse labor, for it will do much of the work that is now done by hand and will also work nicely in vegetable crops where horses cannot be conveniently used. Also, where short working seasons make it undesirable to keep horses, the garden tractor is an immense boon.

Only an exceptional horse will work in row widths of 15 inches or less. This has led to much hand cultivation where intense production necessitates rows as narrow as 10 or 12 inches. One wheel or two-wheel garden tractors may now be had which are adapted to almost any practical condition. From one to three rows can be cultivated at one time. Shallow plowing may also be done by some of the light cultivators, but it is usually a good practice to use a standard plow and do a thorough plowing job every few years.

#### Cost is Important.

The cost is an important consideration in the purchase of a garden tractor, especially when it will be used only for a small home garden. Good machines with cultivating attachments may be had for two hundred dollars and up. A thorough demonstration, in which the buyer himself handles the machine, is important in making a satisfactory selection.

### Warn Shippers Against Altering Certificates

Cautioning shippers of hay against altering shipping point inspection certificates issued under the federal-state hay inspection service, either by erasure or addition, or in any other manner, the United States Department of Agriculture has just published the following facts in a recent case of this kind.

A federal-states inspector inspected a lot of about twelve tons of hay on a farm for which he issued a certificate, grading the hay U. S. No. 2 Timothy. The shipper subsequently shipped a carload of hay to Chicago, and inserted on the inspection certificate the number of the car, thus making it appear that the hay had been inspected in the car.

Examination of the hay upon arrival at destination disclosed that it graded variously U. S. No. 3 Timothy Clover

Mixed; U. S. No. 2 Timothy; Threshed Timothy (not hay), and U. S. Sample grade Timothy (badly stained, musty). This seemed to indicate that there was some hay in the barn which had not been inspected and had been either negligently or improperly mixed with the inspected lot and loaded in the car.

In any case, the department points out, the addition of the car number on the certificate was improper as it imported that the hay had been inspected in the car, which was not the fact.

### Soil Best Adapted for Growing Soy Bean Crop

If soy beans are planted on clean soil and broadcast at the rate of two bushels per acre, one can expect to get from two to three tons of hay per acre. Soil that will produce good corn will usually raise soy beans satisfactorily. Soil that is too acid to raise alfalfa or sweet clover will usually produce a satisfactory crop of soy beans if other conditions are good.

The ground which is sown to soy beans should be carefully worked before the beans are sown. Frequent harrowing is necessary to keep out the foxtail and similar grasses until the beans get a good start.

### Agricultural Squibs

Dig a few dandelions out for your chickens. Green feed is good for them.

Limestone and inoculation are two requirements for success with sweet clover.

It requires about the same preparation to make a good lawn as it does a worthwhile vegetable garden.

The larger second growth of red clover is of particular advantage as it comes at a time when pasture is badly needed.

Anyone who has hauled manure mixed with long corn stalks knows how much trouble the stalks are. With the silo there is no such waste.

In preparing hay for market or use on the farm, a much higher percentage of the valuable leaves can be saved if the hay is baled, as the loss of leaves by successive handlings of the loose hay is avoided.

#### Happiness

Perhaps the philosophy of happiness might be put in one word: Modestation.

## Scientific Child Care Now Simplified Easily

### Mother Finds Way To Reduce Food Problem.

By Louise Leale, Home Economist, Electric Refrigeration Bureau

She was a new comer to our little community, and had stirred up quite a bit of talk—particularly because she was exceptionally pretty and well dressed, but chiefly because of her two wonderful children. Proud as we are of our own off-spring, we had to admit that the two little Allen youngsters were in a class by themselves. The first time we called on her the conversation turned to children—as when won't it when two proud and fond mothers are talking together—and eagerly we asked her to tell us how she had obtained such extraordinary results with her children.

Follow the Doctor's Orders!

"There's no secret about it," she said. "To tell you the truth, I had a lot of trouble with Jane when she first arrived. I was totally ignorant of children, being an only child myself and never having come in contact with babies at all. After foun-dering around for a few months I decided that motherhood wasn't as instinctive a matter as it was cracked up to be, and I took Jane to a child's specialist. He laid down a few simple rules which I followed to the letter, and which were promptly applied to Jack when he came along.

"The rules involved an absolutely regular routine, with plenty of the proper food, lots of sunshine and fresh air and plenty of sleep. Maintaining such a routine has involved some inconvenience and considerable effort, but we quickly became adjusted to it, and feel that the results more than justify any trouble we may have been put to.

Food the Biggest Problem.

"The food end of the business presented quite a sizable problem, because our doctor believes in feeding

babies vegetables, meats, cereals and so on at a very early age. Before we bought the electric refrigerator I had to prepare everything fresh every single day, but now I can prepare enough for the following day. This cuts the work about in half and, because the temperature of the electric refrigerator is so very low, I can do it with a clear conscience. I should never have dared it with an ordinary box, though, for the bacterial increase in even a few hours at a higher, or fluctuating temperature, is something astounding.

Typical Meals for a Day.

"This will give you an idea of what my youngsters eat. For breakfast they have hot cereal, milk, a piece of toast, and a piece or two of bacon or an egg. In mid-morning they have orange juice. At noon they have either meat, chicken, or fish, potato, two other vegetables, bread, and pudding or stewed fruit. In mid-afternoon they have an apple, a pear or a banana. For supper they have a different hot cereal, milk, a saltine with cream cheese on it and dessert. Of course they have cod liver oil after each meal.

"You can see that preparing all this food daily would be an endless task, and that being able to make things for today and tomorrow, at once, means a whole lot to me.

They Love Soup.

"Sometimes, instead of the noon meal I just described, they have soup, bread and dessert. The soup is made out of beef and marrow bones, several vegetables and barley. I make enough for two days in advance, boiling it for ten minutes on the second and third day before serving it. This soup is wonderfully good for them, and they just love it. But without the electric refrigerator where I feel I can keep it safely for two days, I fear I should not have the ambition to make it so often."

We went on to discuss the various phases to child training and feeding, and when it came time to leave the impression had been very firmly implanted in our mind that an electric refrigerator in the home not only safeguards the children's foods, but makes the mother's tasks so much easier that she is left more time to study and enjoy her children—an object of paramount importance in itself.

## VARIOUS PLANS TO STEAL TIME AND MONEY FROM THE UNWARY

Bankers Association Official Tells How Young People Are Fleeced in "Hokum Pokum" Movie Schemes—The Investor Loses Savings by Listening to Messrs. Slick and Smooth.

By W. R. MOREHOUSE

Public Relations Commission, American Bankers Association

THE fabulous salaries paid stars of the first magnitude, and the publicity of the "movies" naturally create longing in the breasts of thousands of our young Americans to get into motion pictures. Because so many are ready to leave home, and risk everything on a fling at motion pictures, unscrupulous persons have devised ways of fleecing these ambitious young people out of their savings. "Hokum-pokum" schemes of various kinds are used with great success. Fake courses in the art of acting before the camera, fake courses on how to make-up, fake registration gags and screen tests, are among the schemes used to separate these thousands of young people from their cash.

W. R. MOREHOUSE

The pilgrimage to the motion pictures centers by thousands of novices usually ends disastrously for the pilgrims. Naturally a few are successful, but only a very, very few, the ninety and nine meeting with disappointment. The truth is, the number of persons who seek to "break into" the movies exceed the number of available positions by one hundred to one, while in the realm of popular stars it is thousands to one.

Don't be misled by the promises of promoters of hokum-pokum schemes that there is room for all, because this last year over 100,000 young people knocked at the door for admission and were turned away because there was no room on the inside for them. Consult your banker or address the National Better Business Bureau, New York City, for information or advice regarding any enterprise that seeks to gain possession of your money. They will give disinterested counsel before it is too late.

Also let every investor approached by either Mr. Slick or Mr. Smooth with a proposition yielding big dividends remember that such assurances always spell financial danger ahead. To every investor who is inexperienced in making investments, in other words perhaps just a little green and perhaps a little too easy, any offer coming from this source should be like a red flag warning to come to a complete stop.

Such investments as Mr. Slick or Mr. Smooth offer are too good to be true and therefore they are not true. Slick, Smooth and Company are not miracle workers although from their sales talk you would infer that they could make you rich as if by magic. No, they are not miracle workers—just slick and smooth.

### The Estate Gag

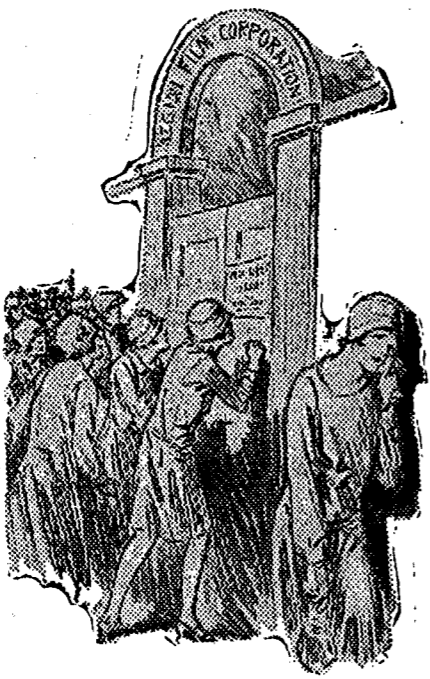

Twenty-four "estates" representing 6 1/2 billions of dollars have been used as bait to interest a lot of savers and finally bleed them of their savings. The scheme is built around a supposed search for the heirs to certain phantom estates. At all costs these heirs must be found. Every person who can by any hook or crook, figure it out that he is in anyway related to the deceased are urged by some shyster lawyer or genealogist to send in their names and their life history.

Soon they receive glad tidings telling them that their family tree can be traced back to the deceased, in fact, they are a direct descendant and an heir at law.

Like fake raffles everybody who responds to the search is found to be a winner—in other words an "heir." Here is where the rainbow chaser gets trimmed. Before his claim to the mythical thousands can be pressed so as to insure success a demand is made on him to advance attorney's fees and pay the expense of tracing through his genealogy.

Not surmising that he is being trapped and seeing only the big inheritance which he is led to believe he will soon receive, he draws the amount necessary from his savings account and sends it on, not knowing he is actually throwing it away. But he is, for like thousands and thousands of other rainbow chasers, he parts with it for the last time.

So-called estate schemes which have produced thousands of "heirs" and at a

The Pilgrimage to the Movies

heavy loss to them have been worked under the following names:

Baker	\$ 250,000,000
Chadwick	37,000,000
Edwards	90,000,000
Ingraham	500,000,000
Hyde	360,000,000
Jennings	400,000,000
Hedges	250,000,000
Kern	200,000,000
Leak	100,000,000
Shepherd	175,000,000
Trotter	200,000,000
Chase	1,800,000,000
Townley	500,000,000
Webber	50,000,000
Welse	20,000,000

Again, before parting with your money in any scheme you do not know all about consult your banker or a Better Business Bureau.

## DAIRY FACTS

### DRY SKIM MILK USED IN FEEDING

Calf raising experiments at Pennsylvania State college show excellent results using dry skim milk, remixed with water, from the second to fifth weeks, and fed dry with grains from then to the end of four months. The experiment station's fourth annual report summarizes the work by Professor Bechdel as follows:

"It has been known and appreciated for some time that skim milk powder of good quality, reconstituted with water to a total solids content of 9 per cent, has a value equivalent to fresh liquid skim milk.

"An investigation was started during the past year to determine the advisability of feeding milk powder in the dry rather than in the liquid form. Thirty-five grade Holstein calves were fed experimentally in three groups. They were weaned to a dry ration when thirty-four days old.

"The oldest group of 12 calves, on which data are now available, made an average daily gain of 1.36 pounds up to six months and were 95.7 per cent normal in size. The milk powder was discontinued when they were one hundred and fifteen days old. These calves consumed a total of 105 pounds of milk powder, on the average, in ad-

dition to 120 pounds of whole milk. The feeding of milk powder in the dry rather than the liquid form affords many advantages in labor-saving. Less equipment is needed, also, and the precautionary measures for sanitation are reduced to the minimum. The results of this work to date prompt the advice that the calves be changed to the dry ration at six weeks of age after feeding the powder in the reconstituted form up to that time. The dry mixture, at first, should contain not over 45 per cent milk powder, and preferably not over 40 per cent. The percentage of powder should be reduced then as the calves grow older and consume more concentrates."

### Dairyman Appreciates Big Value of Legumes

When one studies the differences shown in the profit columns of different dairy farms one quickly appreciates the value of legumes as a factor in profitable dairying. Legumes bring about a greater production by furnishing a better balanced ration, as well as saving in feeds purchased by reducing the needs for as large an amount of high protein feeds.

In addition to the benefit as shown directly by increased dairy returns on account of lessened expenditures for high protein feed, there is also a resulting profit due to the use of legumes through increased production from the soil. Surveys of dairy farms show distinctly that farm profits come not only from good rations and high production of cows, but also from high production of farms as well.

Large production per acre and large

production per cow should be made the watchwords of good dairy farms as they usually mean increased profits. In developing a scheme of this kind, legumes are essential.

### Most of Milk Produced Stored in Cow's Udder

Discarding the old theory that little milk is stored in the udder but that most of it is secreted during milking, the Missouri College of Agriculture has found with dairy cattle slaughtered at the college that the udder is capable of holding all or nearly all of the milk that is produced at one milking. When the udders were removed from the animals and then milked out, the amount and quality of the milk approximated the normal milkings. They indicated that milk secretion is a continuous rather than a periodic process.

### Develop Thrifty Calves Without Using Skim Milk

Developing thrifty calves is more of a problem when skim milk is not available. Under such conditions whole milk should be fed a little longer and then gradually substituted with gruel consisting of high quality concentrates mixed with warm water. Several good ready-mixed calf meals appear on the market or if the materials are available it can be home mixed. A suitable one consists of 250 pounds each of cornmeal, ground barley and wheat middlings or red dog flour, 150 pounds of linseed oilmeal, 100 pounds of blood flour, 20 pounds of steamed bonemeal and 10 pounds of salt.

Dry skim milk is finding favor also. This material is dissolved in warm water and fed like skim milk. Improved methods of manufacturing have decreased its cost as well as increased the supply and its use as a calf feed in whole milk regions is likely to increase.

### Good Dairy Practice to Cull Unprofitable Cows

While it is always sound dairying practice to cull the unprofitable cows instead of letting them drag down the profits of the entire herd, present conditions make it an exceptionally good time to get rid of the boarders, low producers and blemished cows. It is pointed out by C. S. Rhode, University of Illinois.

"Beef prices are high at the present time and the farmer therefore can sell his cull, inefficient cows for meat at good prices. Furthermore, the feed supply runs low on many farms at this time of the year and herd owners have a tendency to underfeed; a bad practice. It would be better to cull a few of the poorer cows and take better care of the others. A third reason for culling out the poor cows now is that the efficiency of the herd will be built up and a higher price realized for the feeds that are sold through the cows," he says.

### Better Milk Notes

1. Don't mix warm and cold milk together. Never mix any milk together

without first thoroughly "stirring" the same.

2. Use a stiff brush, a good dairy washing powder and plenty of hot water in washing all milk utensils, at least once a day.

3. Cool your milk before clamping the lids down tightly.

4. Wash your cans as soon as possible.

5. Don't feed silage, hay or any feed that may transmit an odor into the milk, directly before milking time.

6. Keep your milk in the milkhouse—and not in the barn.

7. Keep your barn whitewashed the year around.

8. Keep manure piles out of paths of the cows.

9. Deliver milk every day.

10. Groom your cows daily.—Pittsburgh Dairy Council.

### Best Seller of All

Book dealers say that the New Testament is always the best seller among all best sellers.

### Snail Avoids Sunlight

However, thick his shell, the snail fears the sunlight. In the hot days of summer he draws deep into his refuge. If the ground is arid and stony, he hores a hole in the rock chosen by him as best suited to his needs. His work is slow and very hard, but it is very dear to him, and while he travels a long way to find the food that he craves, he always crawls back to his refuge, no matter how far it may be.

Dated at Kendrick, Idaho, July 21, 1928. 30-5

### SUMMONS

In the District Court, Second Judicial District of the State of Idaho, in and for the County of Latah

ROSE E. WILSON, Plaintiff,

vs.

WILLIAM WILSON, Defendant.

The State of Idaho Sends Greetings to William Wilson, the above named defendant.

You are hereby notified that a complaint has been filed against you in the District Court of the Second Judicial District of the State of Idaho, in and for the County of Latah, by the above named plaintiff of the nature in general terms as follows:

That plaintiff and you, the defendant, are husband and wife, that you, the defendant, deserted and abandoned plaintiff in October, 1925, that by cruel and inhuman treatment you have caused plaintiff grievous mental suffering and anguish and prays judgement against you that the bonds of matrimony heretofore and now existing between you, the defendant, and plaintiff be dissolved.

And you are hereby directed to appear and answer the said complaint within 20 days of the services of this summons, if served within said Judicial District, and within forty days if served elsewhere. And you are further notified that unless you so appear and answer said complaint within the time herein specified, the plaintiff will take judgment against you as prayed in said complaint.

Witness my hand and the seal of the District Court of the Second Judicial District of the State of Idaho, in and for Latah County, this 9th day of April A. D., 1927.  
(Seal, District Court)

Harry A. Thatcher, Clerk.  
By Adrian Nelson, Deputy.

## DADDY THE DAIRY

### PURE-BRED SIRES AID SCRUB HERD

The purchase of a proved sire which will increase the scrub herd average production 1,000 pounds, at a value of \$23.25 a head, is sound business, say dairy specialists at the New Jersey State College of Agriculture.

Almost any pure-bred bull will improve the condition of the scrub herd. With the increase in herd production, however, replacement bulls must be chosen more and more carefully in order that the herd production may continue to increase. The dairyman, therefore, either must buy a bull calf from proved antecedents or he must buy a proved sire. The purchase of proved sires is the safest method from a financial standpoint, because records are available of what the bull has done.

The management of an old bull, which may be unruly and treacherous, is greatly simplified by the construction of a strong, safe, well-arranged bull pen.

For replacements, the majority of breeders choose bull calves from proved ancestors. A great chance is thus run, for the particular individual purchased may not transmit the desired characteristics for which he was purchased.

"The good that bulls do lives after them," is a true statement, but the good is often limited to a few of their descendants, and in many cases the bulls have gone to the shambles before their daughters have proved that they are an improvement over their dams.

### Care for Cream

As long as creameries receive an inferior quality of cream, they are forced to pay inferior prices for nutter fat. Cream that is sweet and clean in flavor is the type of cream that will command the best prices. One of the most important steps in the production of such cream is to cool it in cold water immediately after separation. The cost of cooling tanks for this purpose is very small. Such an investment is a profit maker for the dairyman.

Wedding announcements and invitations printed at the Gazette office. 26-1

## Harvest Checks

This year, as in years past, it will be our pleasure to cash many harvest checks.

We cordially invite you to use this service. Or better still, deposit part of this year's harvest check as a nest egg for a growing Savings account—

And place the remainder in a Checking account, thus enabling you to make payments conveniently by check.

"Your Home Bank"  
KENDRICK, IDAHO

### Ancient Use of Stucco

The ancient Greeks used lime and stucco extensively and imparted their secrets to the Etruscans of middle Italy, from whom the Romans in turn gained their knowledge.

### Poor Ladder to Climb On

"Popular nothing!" exclaimed a young actress who was discussing a rival player with a friend. "Why the longest run she ever had was in her stocking."

### Razor Skids on Curve

An electrically-operated razor with a blade which oscillates sideways while the user draws the razor down his face has been developed.

### "Our Lady of the Snow"

Over the doors of the Houses of Parliament appear the words "Our Lady of the Snow." "The wholesome sea is at her gates both East and West."

LOCAL NEWS

Mr. and Mrs. R. D. Newton of Chney, Wash., Mrs. Harvey Smith of Moscow and W. D. McGregor of Troy spent Tuesday in Kendrick with friends. Mr. and Mrs. Newton are nicely located in Cheney where Mr. Newton recently purchased a drug store. Mr. McGregor will teach the seventh and eighth grades in the Troy schools again this year.

Guests at the home of Mr. and Mrs. Louis Malnarich last Sunday were Messrs and Mesdames Carl Brown, Ira Crandall, Mr. Martin, all of Pullman, and Mr. Urielo of Genesee, Alma Swanson of Crescent.

Mr. and Mrs. L. J. Herres were Lewiston visitors Tuesday evening.

Mrs. Edgar Dammarell and baby daughter returned Saturday evening from a two week's stay with her sister, Mrs. James Benjamin, near Troy.

Mrs. John F. Waide of Deary is spending the week here with her sisters, Mrs. Wm. Watts and Miss Rilla Davidson.

Mr. and Mrs. E. H. Dammarell visited at the home of Rev. and Mrs. C. D. Bell in Moscow last Sunday.

Mrs. G. W. McKeev and little daughter, Paula, are visiting relatives and friends in Spokane.

Mr. and Mrs. Hamey of Spokane arrived the first of the week to look after property interests here. Mr. Hamley was at one time postmaster of Kendrick, having served for two terms.

C. F. Byrne returned Wednesday afternoon from a business trip to Moscow.

John Reid returned Wednesday afternoon from Elma, Wash., where he attended the funeral of his brother, Ed, who died last week from the result of an accident in the woods where he was working.

Mr. and Mrs. Lloyd Kuykendahl visited relatives here last week. They were returning to Wallace from Red Bluffs, Cal., where they visited Mrs. Kuykendahl's parents, Mr. and Mrs. Herman Koepf for several months.

Joe McComb, postmaster of Troy, was a Kendrick visitor last Friday.

Tom Long purchased a new Chevrolet coach from Stewart Compton of Orofino, who is agent for the Chevrolet.

Miss Alice Bell, daughter of Rev. and Mrs. C. D. Bell of Moscow, visited friends in Kendrick this week.

Mr. and Mrs. Follett of Genesee spent the week end in Kendrick with their daughter, Mrs. Jack Barnes.

Mr. and Mrs. Wayne Herres and baby of Lewiston visited at the home of Wayne's parents, Tuesday of this week.

Art Hartinger of Palo Alto, Cal., arrived last Friday to spend a week with his brother, Wesley at Leland.

Mrs. Clara Triplett, Mr. and Mrs. Mac West, and Miss Maxine West of Seattle spent the first of the week at the home of Mr. and Mrs. M. O. Raby, returning home Wednesday.

Mr. and Mrs. Harry McKeever of Coeur d' Aene visited friends in Kendrick yesterday afternoon.

E. H. Dammarell was unable to be at his place of business this week on account of illness.

G. F. Walker transacted business in Lewiston yesterday.

E. H. Emery and N. E. Walker attended the republican convention at Moscow Tuesday as delegates from Kendrick precinct.

John Florance of Clarkston Heights was a Kendrick visitor yesterday. Mr. Florance was associated with Mr. Dammarell in the Kendrick Store Co. a number of years ago.

Jack Pickerd of Troy was a Kendrick visitor yesterday afternoon.

Ben Davis and two little daughters of Culesac was transacting business in Kendrick, Thursday.

Miss Mable Taber returned last week from coast points where she spent the summer with relatives.

Mr. and Mrs. Cull and children of Spokane are visiting at the

home of Mrs. Cull's sister, Mrs. W. J. Carroll.

Frank Nesbit made a business trip to Moscow yesterday.

Miss Bell, Mr. and Mrs. E. Kempton, and Ed Rauschke of Seattle arrived Thursday to visit at the home of Mr. and Mrs. Wm. Freytag. They expect to return home Monday morning.

"What ruined your business?" asked a friend of a man who had just been declared bankrupt. "Advertising," replied the latter. "Why, how was that?" said the friend. "Let my competitors do it all," answered the down-and-outer."—Ex.

Julietta News

Mr. and Mrs. S. T. Rector and Earl Rector and wife of Potlatch, visited with Mrs. Garrison a few days last week.

Mrs. Sophia Taylor, who has been gone for some time, is home again.

Mr. and Mrs. Clausen who have been visiting Mrs. M. Nutt, went to Clarkston, Sunday, to visit relatives.

Mrs. Chas. Talbott and sons, who have been visiting relatives here, has returned to her home at Potlatch.

Claude Clark and Cecil Gruell motored to Lewiston, Monday.

Mr. and Mrs. M. S. Gruell and sons spent Sunday with home folks at Juliatta.

The Rev. Pearson preached at the U. B. church Sunday morning and evening.

Chas. Noble was a Lewiston visitor Tuesday.

A number of the friends of Mr. and Mrs. Philip Johns gave them a shower Saturday night.

Miss Amsel Green left Thursday. She will teach school again this year in the southern part of the state.

Mr. Arnold Behrens went to Grangeville Tuesday evening. Word came to him that Mrs. Behren's mother had passed away.

In a letter received from Donald Gruell, who is on the fire patrol, he stated the fire was very bad. One covers about eight or ten thousand acres and two or three hundred in another. He has been transferred from Canyon Ranger Station to the Bungalow. He states that from twenty-five to fifty men are coming in each day. Says it sure keeps the packers busy getting in equipment and food for them. He had a hike of thirty miles to make in one day, so fire fighting

is not all play.

Edgar and Eugene Taylor who have been harvesting, are home again, just in time to help harvest some of the grain here.

The cannery has opened up for a two-day run this week. There has been some doubt as to whether it would open at all. The cannery is surely a great help to the people of Juliatta, and its whistle will surely be a most welcome sound.

Mrs. M. Nutt and daughter made a business trip to Lewiston, Tuesday. Mrs. Everett Custer, Cecil Gruell and Mrs. Gruell accompanied them.

Tuesday seemed to be the day that Juliatta citizens chose to visit Lewiston, as Mr. and Mrs. Frank Spray and daughter, Thelma, Mr. and Mrs. Ira Fix, Claude Clark, and Mr. and Mrs. Leland Houck also visited the city.

Still Crying Sales

Shepherd is still at Troy and still in the auctioneering game and wants to cry your sale. If you contemplate having a sale this fall be sure to figure with Shep. Shepherd has been in the sales game in Latah county longer than any other auctioneer and still going strong. His past record in the sales game is well known along with his ability to conduct a sale. His judgment as to values entitles him to your earnest consideration. He is always on the job. You can find him any time. He pays all phone calls and solicits your business. Call N. R. Shepherd the Auctioneer, Troy, Idaho. 31-4

Talking About Oneself

Speech of a man's self ought to be seldom and well chosen. I know one was wont to say in scorn, "He must needs be a wise man, he speaks so much of himself"; and there is but one case wherein a man may commend himself with good grace, and that is in commending virtue in another, especially if it be such a virtue whereunto himself pretendeth.—Bacon.

Bell 700 Years Old

A church bell 700 years old is still in use in a church in Vestergoeland, a province of Sweden. On it is this inscription in quaint medieval Swedish: "When I was made, then was one thousand two hundred twenty winters and eight from God's birth."

Something Worth While

The friend who shot the man whose feet looked to him like rabbits, should go hunting with a policeman and get some big game.—Pitt (Mich.) Journal

Tonight & Saturday

Frank Lloyd presents WINDS OF CHANCE

By Rex Beach

Featuring, Anna Q. Nilsson, Viola Dana, Ben Lyon, Victor McLaglen, Dorothy Sebastian, Hobart Bosworth, Claud Gillingwater, and Philo McCullough.

One of the most virile and fascinating stories ever written by Rex Beach. A mighty epic of one of America's most stirring periods—the gold rush in the Klondike. A thrilling tale of stirring deeds in the land of everlasting snows—where but to live is a constant battle with tempestuous elements, wild beasts and treacherous men.
