Moral Awakening

"It is high time," said the reformer, "that we had a moral awakening. Let us arise in our might. Let us gird our loins. Let us take off our coats. Let us bare our arms. Let us—"

"Hold on," exclaimed a tall, thin woman near the platform "If this is to be a moral awakening, don't you dare to take off another thing."—Ex.

In The Garden of Eden

When Adam in bliss,
Asked Eve for a kiss,
She puckered her lips, with a coo;
With looks quite ecstatic,
She answered emphatic
"I do't care, Adam, if I do!"
—Ex.

Card of Thanks

We wish to thank our many friends and neighbors and the members of the Fraternal Order of Oddfellows for their kindness and services rendered during the illness and bereavement of our husband and father.
Mrs. Bertha Eichner and family.

Presbyterian Church Notice

Sunday school at 10 o'clock. We are still pulling for the 100 mark and we need every scholar present with someone with them. Let us make this a rally day and everybody go to church.

Morning worship at 11 o'clock. The pastor will deliver a Thanksgiving sermon and we cordially invite the public to attend this service.

At 6:30 p. m. the Christian Endeavor, just newly organized, will hold their first services and we are anxious that the young people get a good start. The public is invited to come out and help make this, their first service, a great success.
N. E. Franklin, Pastor.

fund. The other picture is entitled "We". It was given to them with a year's subscription to the Youth's Companion. It is a picture of Lindbergh crossing the Atlantic in his plane.

"Chuckler"

Mrs. Jarvis: "What three words are most commonly used in high school?"
Edwin: "I don't know."
Mrs. Jarvis: "You are correct."

Mr. Beardsley: "Can you give me an example of wasted energy?"
Ivan C.: "Yes, sir,—telling a hair-raising story to a bald-headed man."

Miss Ledbetter: "This word is miss—pelled."

Claud Woody: "Well, that shows I knew enough about it that I didn't have to look it up in the dictionary."

Miss Ledbetter: "Now I want you to tell me which of those words are singular and which are plural: Carl, you take the first, 'trousers'."

Carl D.: "Singular at the top and plural at the bottom."

Helen C.: "Don't you think Emma Wegner would make an economical wife?"

Donald: "Absolutely. She has the habit of turning off the living room lights every time a man comes to the house."

Miss Ledbetter: (in English) "I have went. That's wrong, isn't it?"

Hugh: "Yes ma'am."
Miss L.: "Why is it wrong?"
Hugh: "Because you ain't went yet."

Mrs. Jarvis: "Use the word 'Gruesome' in a sentence."

Jack: "The boy went to camp and when he returned his mother found he had grew some."

Mr. Beardsley in biology class: "For your next lesson take page 189 to the barn swallows."

Father: "If you had a little more spunk in you, Earnest, you'd stand farther up in your classes. Do you know what spunk is?"

Earnest: "Yes, sir, Past Participle of spunk."

Miss Ledbetter: "Spell ferment and give its definition."
Charles E.: "F-e-r-m-e-n-t—to work."

Miss L.: "Now use it in a sentence so I may be sure you understand it."

Charles: "In nice weather I would rather play football out-of-doors than ferment in the schoolhouse."

Mrs. Jarvis: (instructing pupils in use of the hyphen) "Walter, name a hyphenated word."

Walter: "Bird-eye."
Mrs. J.: "Splendid! Now tell us why there is a hyphen in bird-eye."

Walter: "It's for the bird to sit on."

Husband (reading aloud a newspaper report of a fire): "One woman escaped down a waterpipe at the back of the house."
Wife: "How lovely to be as slim as that!"—Ex.

FACTS— Not Dreams

§ WITHIN the last few years the electric service companies of the nation have turned their attention to the electrification of farms.

§ ENGINEERS have tackled farm problems right on the farm—and they have developed many ways in which electricity can make farming pay greater dividends—both in producing efficiency and in new living comfort.

§ THIS is a real contribution to the solution of the farmer's problem—a solution that has been worked out not in idle theories but by the earnest consideration of cold facts and the desire to bring to the attention of the farmer the vast possibilities of electricity wherever it can be economically utilized.

To The People of Kendrick

Your schools are nearly one third over for this school year. Is your child getting what he should out of his schooling? Have you shown his teacher and him that you were interested in the place and surroundings where over one half of his wakeful hours are spent?

Have you given any inspiration to him and his teacher? Why not try it and see what effect it may have. All of us are human.

A visitor at the school the other day offered this criticism, "I see one serious thing wrong with your school." To an anxious inquiry this reply was made: "The people of Kendrick are not visiting the schools as they ought and by so doing showing their interest and giving inspiration to their children."

During National Education week we had about ten visitors. Come in and inspect your plant for developing efficient manhood and womanhood.

Come and see us at work and at play.

Come and enjoy the use of your library and periodicals.

Come and discover our faults and our weaknesses and talk them over with us.

Come and assist us in solving your and our problems.

Come anyway and any time but come.

You need to know your school and its needs.

Five reasons why I ought to visit the schools:

1. I need to cooperate with the school and its needs.
2. I need to cooperate with the school in order that my child may get the most out of his schooling.
3. The teacher and children need the inspiration that an occasional visit will give them.

Junior Program

Wednesday afternoon the Juniors gave the regular six weeks program. The program consisted of: A Turkey song by the class. A short exercise "Be Thankful"; "Thanksgiving Day", a song by the class. (In these three selections the class was dressed up as small children.) Dialogue, "Grandma's Soliloquy" Helen Emmett. Song, "I'm the Kid that Built the Pyramid" by the Junior boys. Dialogue, "A Cheerful Caller", Marjorie Davidson. Piano solo, Doris Emery.

Party Postponed

The all high school party to be given by the Sophomores and Freshmen has been postponed until next week because of the examinations being given this week; making it impossible for the students to plan for it.

Faculty's Thanksgiving

The teachers as well as the students expect to have a good time during Thanksgiving vacation. Miss Ledbetter and Miss Dille will visit with Nannie and Mary Weaver at their home near Lenore; Mr. and Mrs. Knepper will visit the Hoyt family in Spokane; Mr. and Mrs. Jarvis will go to McCall; and Mr. Beardsley will remain at home with his family.

4. I owe it to myself to know how the money for schools is being expended and how the school property is being kept up.

5. The greater part of my child's mental, moral and physical nature is developed at school. I am interested that his development be along right lines.

Against going—None.
We appreciate the visits of those who have visited us.

Busy High School

As Thanksgiving vacation is the last two days of this week the examinations were given the first three days.

First and Second Grades

Those neither tardy nor absent during the past six weeks' period are: Wallace Fraser, Leslie Scott, John Brewster Thompson, Gayle Bolon, Lucille Humphrey, Barbara Long, Irene McNeal and Marie Sloan of the first grade and Eileen Benjamin, Ethel Fraser, Doris Garoutte, Helen Gardner, Myrtle Humphrey, Dick Carlson and Harry McNeal of the second grade.

Please Keep in mind the date for the Primary grade program—December 12, at the New Kendrick Theatre. The program will be published in next week's paper. Save that date—Dec. 12.

The first primary is planning on a play and rhythm band, while the second primary, or third and fourth grades, are planning on a Kiddies Karnival, with characters from Holland, Scotland and Ireland who have volunteered their services for the carnival. There will be songs, dances, recitations, etc. If you are a pessimist come, because there will be a smile in every line.

Seventh and Eighth Grades

This week only the second six weeks of school and one third of the school year. Six weeks exams are being given.

The seventh and eighth grades have two new pictures to add to their walls as soon as they are framed. One is Phillips' "At the River". The members of the room paid for it with their gum

The DAIRY

SELL CORN HIGH TO DAIRY COWS

It is unusual for a farmer to get \$4.40 a bushel for his corn in North Carolina but there is a way to do it and Tom Morrow of Iredell county has learned the method. Grind it into meal and feed the meal along with other home-grown grains to dairy cattle.

"It takes good cows on a good pasture to pay such returns but the records kept on Mr. Morrow's herd by the tester of the Iredell Cowtesting association show this to be a fact," says John A. Arey, dairy extension specialist at the North Carolina State college. "An individual record is kept of every cow in Mr. Morrow's herd. During May, the eleven cows composing this herd, produced 811.3 pounds of butterfat which sold for 42 cents a pound and brought in \$130.75. The skim milk left on the farm after the cream was sold had a feed value of \$29.57, making the total income amount to \$160.32."

Mr. Arey states that these eleven cows were fed 2,269 pounds of a home-grown grain mixture made by mixing together 200 pounds of corn meal, 100 pounds of cottonseed meal and 100 pounds of crushed oats, which was valued at \$46 a ton or \$52.10 for the amount fed. The animals also consumed oat straw valued at \$6.80 and were grazed on a grass and clover pasture for which a charge of \$2 per head was made. The total feed bill was thus \$80.90, leaving a net income of \$79.33.

On this basis, states Mr. Arey, the cows paid \$9.21 each for their pasture. The cows consumed 23.6 bushels of corn in the form of meal and allowing all charges for the feedstuffs, the animals paid \$4.46 a bushel for the corn. This does not take into account the manure left on the place.

Therefore, states Mr. Arey, the man who has cows above the average, a good pasture and will grow his hay and grain mixtures at home can make money selling cream. The dairy cow, in his opinion, is one of the very best markets for the surplus feedstuffs produced on the average farm.

Use Cartons for Butter for Sanitary Reasons

The increased use of cartons for sanitary reasons in packing butter for retail sale is considered advisable by health officials in 106 of 117 cities, according to a special survey being made by the bureau of agricultural economics, United States Department of Agriculture.

These officials declared that cartons lessen the likelihood of contamination both in the home and in the retail store, and are a means of checking the absorption of undesirable odors.

The department's inquiry is part of a general survey dealing with the merchandising of farm products by cooperative marketing organizations. Various merchandising methods are being studied with a view to emphasizing practices in the interests of both producers and consumers.

Daily Portion of Skim Milk for Young Calves

The young calf usually will take about six to ten pounds of skim milk daily, which is increased gradually to sixteen to twenty pounds by the time the calf is four months old. In addition, a little grain and some good alfalfa or other legume hay is provided.

During this time, cleanliness of feed and surroundings are of great importance. If it is possible to have each calf tied separately, the amount of feed can be regulated better and the feeder can watch the condition of each calf more easily. The most practical plan is to provide a row of simple stanchions in which the calves may be held at feeding time. At all other times they should be left free to run in their pen or lot.

Dairy Hints

A much larger percentage of dairy farms could use silage economically in their plan of feeding dairy cattle.

Poor producing cows should be eliminated from the dairy herd by careful culling. The best method of doing this is to join a cow-testing association.

Poor, emaciated, hungry, gaunt, antipating cows never produce largely or profitably, no matter how well bred they may be or how well they are cared for otherwise.

Cream is a highly perishable product. Like other similar products it is best when fresh and should therefore be marketed as early as possible. Age will deteriorate cream under any condition.

There are many cases of depraved appetites in cows that are called "bone chews" on some of our ranges in this country similar to such as reported from South Africa, where, in certain regions, there is a phosphorus deficiency in the soil and, therefore, in the grasses grown on this soil.

Inoculation of Suckling Pigs

More Care Is Required Than When Same Treatment Is Given Older Hogs.

(Prepared by the United States Department of Agriculture.)

Advisability and economy of immunization of suckling pigs against hog cholera and the discrimination required in inoculation of young pigs form part of the new material included in the revised edition of Farmers' Bulletin 834-F, Hog Cholera, which the United States Department of Agriculture has just published.

"Although it has been repeatedly shown that very young pigs can be given lasting immunity by the simultaneous inoculation with antihog cholera serum and hog cholera virus," say the authors, M. Dorset and U. G. Houck of the bureau of animal industry, "it is probably also true that more careful discrimination is required than when the same treatment is applied to older hogs. This is because of the fact that young pigs are susceptible to many diseases and are more easily affected by adverse conditions than older hogs. In administering the simultaneous inoculation to young pigs it is, therefore, especially important to be sure that they are in good health at the time of inoculation. If pigs are unthrifty from parasitic infection, or, in fact, from any cause, if they show signs of thumps or other abnormal conditions, the simultaneous inoculation should be postponed until they are restored to complete health. In urgent cases in which pigs must be immunized immediately, it is better to use serum alone if the pigs are not in good condition at the time. They can be given the simultaneous inoculation at a later date.

Pigs Protected Sooner.
"The immunization of suckling pigs has much to recommend it in the way of decreased cost and increased protection. By immunizing early, less serum is required, and the pigs are protected sooner. Since the successful immunization of suckling pigs does not necessitate the reduction of feed, it is possible that the practice would enable farmers to market their pigs somewhat earlier than if the immunization were carried out after weaning."

Also new in the revised edition is the paragraph on the period of incubation, reporting tests conducted by the bureau of animal industry. Virus was injected into 171 sows and the time noted until the appearance of visible symptoms, the shortest time being 3 days and the longest 7 days with 95 per cent of the experimental animals showing symptoms on the fourth, fifth or sixth day.

Other tests have added evidence that no breed of hogs is immune to cholera, although there is a considerable difference in the degree of susceptibility, in individuals.

The bulletin gives careful descriptions of the symptoms of cholera, together with mention that some other diseases may have somewhat similar symptoms. Coupled with this is the warning that "owners should remember that cholera spreads rapidly through a herd and no time should be lost in calling a veterinarian to diagnose the disease and administer proper treatment. If the disease is cholera heavy losses can be averted only by prompt immunization of the herd." In case of doubt it is well to kill a sick hog and check up with the effects on the internal organs which are described in detail.

Source of Infection.
A stream running through a hog lot is recognized as a valuable source of water supply, but also as a dangerous source of infection. "Therefore," the authors say, "swine confined to lots or pastures with streams running through them should be immunized."

Farmers' Bulletin 834-F, in the revised edition, gives recent statistics of the losses from hog cholera, which have averaged not less than \$30,000,000 a year for forty years, explains the cause, describes the symptoms, and differentiates between symptoms of other diseases, describes some of the ways in which cholera is spread, recommends sanitary preventives, and prevention by immunization. It explains briefly the manufacture of the serum and the virus, and their administration to individual pigs and to herds, and the aftercare of immunized animals. Several new paragraphs discuss what is known of "breaks" in immunity. Experimental figures are cited to indicate that fear of an injurious effect by the serum on the fertility of sows is groundless, and that the danger of causing abortion in pregnant sows is inconsiderable, except when farrowing time is near. Suggestions for restocking a farm after an outbreak of cholera are given in detail, and farmers are warned against so-called "drug remedies" to cure or prevent cholera. None of these has proved useful or effective.

Farmers' Bulletin No. 834-F may be obtained free on application to the Department of Agriculture, Washington, D. C.

Fertility Problem
Weed control is largely a fertility problem. Weeds usually become troublesome in pastures when the conditions are not favorable to the growth of desirable plants. On the other hand, when conditions are kept favorable for the growth of bluegrass and white clover, the weeds are seldom a serious problem.

COMING For FOUR DAYS

THURSDAY, FRIDAY, SATURDAY, DEC. 6, 7, 8 and SUNDAY AFTERNOON, DEC. 9th at 3 o'clock p. m.

The Peak of All Picture Entertainment!

Never before has any picture been planned with greater thought of your enjoyment; never before has a motion picture been produced calculated to sweep you to such heights of exultation! *It's here at last—this lavish, thrilling, death-defying spectacle of love and romance.*

BEN-HUR is a picture that brings to your door the realms of beauty and magnificence never before conceived by man; it unfolds before your eyes scenes so awe-inspiring in their grandeur, so poignant and breath-taking in their tremendous action that it will enthrall you from beginning to end. You must see it.

The Most Stupendous Spectacular Romance of all Time

Doors open at 7:30 sharp each evening. Come early if you want to get a seat, as hundreds of people are planning to see this marvelous picture!

Admission: Adults 50c, Children under 12 years, 25c

The NEW KENDRICK THEATRE

Egg-Laying Difficulty Is Very Easily Cured

It often happens that a hen has difficulty in laying an egg—probably a particularly large double-yolked one. Such a bird is easily detected. Not only is she to be seen visiting the nest again and again without effect, but she is visibly ill at ease, crouching about with tail down and a generally woe-begone appearance. The quickest way to relieve her is to give her two teaspoonfuls of castor oil (by means of a clean fountain-pen filler), and immediately after to pour into the vent two teaspoonfuls of olive oil. This will inevitably result in the egg being passed within an hour or so.

Like Old Roosts

Pullets learn to like their roosts in the colony houses and fruit trees. After they have been housed for several weeks the weather may be warm and sunny, and there is a great temptation to turn out the flock for a few more days of exercise on the range. If this is done, and the pul-

lets have any way of returning to their old roosts, they are apt to leave the laying house some evening, and it is a most discouraging job picking them from the trees.

Corn Is Important

Good yellow corn is very important in mash and scratch feed. Difficulties experienced with coarsely cracked grains have caused some people to not use it as much as would otherwise be the case. When corn is cracked, it should be sifted and the finer parts put into the mash. The remainder should then be used as scratch grain. If fine parts of cracked grain are not fed in the mash, it will not be eaten and will mold on the floors and other damp places.

Altruistic Position

We should eat more raw carrots and fewer rare beefsteaks, says a dietitian, and just to prove our unselfishness we are ready to turn over all our raw carrots to him in exchange for his rare steaks—Springfield Union.

BETWEEN MEALS

Pep up with CANDY

Quick energy—that's what candy is. Along about 10 A. M. or 3:30 P. M., half way between meals, how it pep you up to last till meal time. Good for you, too—we'll say! All your favorite candies are here.

DAIRY POULTRY

SUBSTITUTE FOR GOOD SKIM MILK

A report just received from the Massachusetts Agricultural college says that under present conditions dry skim milk fed in accordance with their experimental schedule "offers the best substitute for liquid skim milk in the rearing of young calves." This confirms the work of Prof. C. H. Eckles of Minnesota, who says "There is no substitute for milk in raising good milk producers." The latest feeding experiment is reported by Dr. J. B. Lindsey and Prof. J. G. Archibald as follows:

For several years the experiment station at Amherst has carried on extensive feeding trials on the value of different feeds for raising young calves. Experiments with calf meals and preliminary trials with skim milk powder were reported in Bulletin No. 223. The powdered skim milk offered the most fruitful field for further study and during the past three years a large number of calves, mostly high grade Holsteins, have been raised on it. Although a little more expensive than liquid skim milk, the powder has the advantage of being in a form that will keep for a long period of time. It can usually be obtained when liquid skim milk cannot be, and is much cheaper than whole milk.

In the early experiments the maximum amount of skim milk powder (3 1/2 ounces of the dry powder—9 quarts of liquid) was fed daily until the calves were four months old.

During the past year calves have been reared on much smaller quantities of the powder, the object being to cut the cost.

The procedure has been similar to what was followed in our earlier work except that when the calves were two months of age their daily allowance of skim milk powder was cut to 21 ounces (6 quarts of liquid) and at three months was again cut to 10 1/2 ounces (3 quarts of liquid), and a special effort was made all through the experiment to induce the calves to eat heartily of the dry grain mixture and rowen.

The calves made an average daily gain of 1.4 pounds, at a cost of 18.2c a pound, about 125 pounds of the dry milk being fed to each calf. Growth was practically the same as when the larger quantity of powder was fed and the cost was lessened appreciably. It is probable that delicate calves will require rather more skim milk powder than the amount mentioned above.

Under present conditions, dried skim milk fed as above suggested offers the best substitute for liquid skim milk in the rearing of young calves. Calf meals are fairly satisfactory but are apt to cause digestive disturbances and do not promote as rapid growth.

Not Many Ohio Families Are Making Own Butter

Making butter for the use of the family is by no means a unanimous practice in Ohio farm homes. This fact has been developed in an analysis of accounts for 48 farm homes, kept with the assistance of home demonstration agents from the extension service of the Ohio State university.

Only 38 of the 48 families made butter for themselves during the year, and not all made enough to satisfy the requirements on their own farms, as indicated in the report that 40 of the 48 families bought butter during the year, some of them in order to supplement the supply from the home churns.

In all, 59.9 per cent of the butter used on these farms was produced on the farms where it was used.

As regards whole milk, the situation was very different, since 47 of the 48 families produced and used whole milk during the year. One family produced no milk, and eight did not produce enough for their own needs so bought extra milk. Of the milk used by all 48 families, however, 9.6 per cent was produced on the farms where it was used.

Soiling Crops for Cows

In Iowa trials it was found that cows fed 37 pounds of soiling crops a head daily, in addition to limited pasture and a reasonable allowance of concentrates, produced no more milk or butterfat than others fed only 22 pounds of corn silage in place of the 37 pounds of soiling crops. This higher value of corn silage, pound for pound, in comparison with soiling crops, is due to that fact that good corn silage contains a much higher percentage of dry matter than most soiling crops.

Clean Dairy Utensils

Scrupulous cleanliness of all dairy utensils is conducive to health of humans and young animals fed dairy products. This may be accomplished by the use of steam or boiling water. Pouring from vessel to vessel is not efficient. Steam sterilization not being practical because of the cost of proper equipment, utensils for home use, where one or several cows are kept, may be effectively sterilized with a solution of calcium or sodium hypochlorite.

WELL-BRED HENS PROVE CHEAPEST

Hens with good breeding often produce two dollars worth of eggs in a year more than hens with poor breeding, aside from their increased value as breeders, according to experiments on the Cornell poultry farm at the college of agriculture at Ithaca, N. Y. This means that if a poultryman can get low-bred chicks for nothing he could afford to pay one dollar a chick for high-line birds, and still make \$1 more a year on each bird than from the low-line birds.

Poultrymen at Cornell point to these facts as evidence that a baby chick costing ten cents may be dear, while a chick costing fifty cents may be a good investment, if the higher priced chick comes from consistent high-producing stock. Trap nesting, pedigree hatching, and progeny testing must be used to obtain consistent high records.

The records of the hens range from 175 to 302 eggs. Seventy-five per cent of the pedigreed flock laid more than 200 eggs in one year. The males are from hens with pedigrees of 225 eggs to 302 eggs. One pen of 35 pullets on the experiment farm averaged 86 eggs a bird during the four winter months to March 1, or about 22 eggs a bird a month. These eggs were produced during the season of high prices, which is not true of birds that do not have good breeding, the department says. The number of birds that have laid 200 eggs has increased from 38 in 1921 to 179 in 1927.

Cheap but Ideal Floor Favored for Henhouse

A cheap but ideal floor can be put in a chicken house by filling in about eight inches of cinders, gravel, or crushed rock and covering it with about two inches of rich cement. The porous material under the cement will break up the soil capillarity and tend to keep the floor dry. The filling should be tamped until it forms a solid base for the concrete.

Hollow tile forms a more satisfactory base for the concrete and only one-half an inch of cement is needed to cover it. Tile is more expensive than the other filler, however, and sometimes much harder to get. It should be laid in a layer of sand so the surface of the tile can be made as smooth as possible before the cement covering is put on.

A slope of four inches in twenty feet from the back to the front of the house will tend to keep the litter evenly distributed over the floor. This slope will practically eliminate the disagreeable task of scratching the litter out from under the dropping boards of the ordinary house. There is no better time of the year to put a floor in the chicken house than just before the pullets are put into their winter quarters.

Profit on Goslings Is Made During Holidays

The best profit on market goslings (young geese) is made on those marketed at Christmas and New Years, as a general rule. Turkeys have the call at Thanksgiving. It will not do, however, to neglect the young geese and unless they are kept growing at top speed they will not be large enough to be most profitable when they are wanted for the holiday tables.

Sometimes we read that these young geese will obtain all the food they need in the fields and that they will live and grow if they have nothing but grass and whatever else they can find among nature's stores.

Give Clean Water

Clean and fresh water is as necessary to the success of egg production as is a correctly balanced ration. The man who goes to a lot of trouble with his feeding but is just indifferent with his watering, may expect trouble. Water is one of the chief constituents of an egg and it is required by the hen just as much as a human being requires water to drink. It should be given several times each day, especially in summer.

Must Have Feed

The Purdue university poultry department summarizes the general treatment of the farm hen as follows: "Hens won't live on hopes and prospects. They must have feed, and plenty of it. The hen does not get enough to eat in summer. The fields, barnyards and feed lots will furnish the hen little else but grass and green food. These alone and in their present insufficient quantities will not be sufficient to produce good egg production."

Culling Nonproducers

An easy and efficient method of culling the nonproducers out of the new hatch of pullets can be accomplished in the following manner, if each hatch has been housed separately: Keep the first 75 per cent of the pullets that come into production and sell the other one-fourth, or those that are last to start producing. By following this practice, few nonproducers will be carried through the winter on high-priced feed, taking up room needed for layers.

"A car for every purse and purpose"

No matter what you plan to pay for your next car, you can have General Motors' quality and value. General Motors makes a car for every purse and purpose; it offers a choice of suitable models in every price class; and each General Motors car—whether its price is a few hundreds or thousands of dollars—has shared in General Motors' purchasing economies, has benefited from its Research Laboratories and Proving Ground, and is equipped with a strong and luxurious Fisher body.

See what General Motors offers for the price you want to pay, and remember that the model you want can be purchased conveniently on the low cost GMAC Payment Plan.

\$525 to \$725

Seven models of the Outstanding Chevrolet of Chevrolet History. A "six" in the price range of the "four". Powerful new 6-cylinder valve-in-head engine. Beautiful new Fisher Bodies. New colors. New 4-wheel brakes. Also: Delivery sedan; Light delivery chassis. 1 1/4-ton chassis and 1 1/4-ton chassis with cab, both with four speeds forward.

\$745 to \$875

Seven models of today's PONTIAC—Further improved from radiator to tail-light. More powerful 6-cylinder engine. Greater operating economy. Quicker acceleration. The striking Bodies by Fisher express the vogue of the hour.

\$925 to \$1,085

Seven models of the New OLDSMOBILE—"The Fine Car at Low Price." Completely redesigned and improved by General Motors. More powerful. 4-wheel brakes. Longer, roomier Fisher Bodies. Also five De Luxe models, \$1,145 to \$1,235.

\$1,145 to \$1,375

Seven models of the new Oakland All American Six, recently announced. Distinctively new original appearance. Splendid new performance. Luxurious appointments, in new bodies by Fisher. A car you'll be proud to own.

\$1,195 to \$2,145

Eighteen models of the BUICK—The Silver Anniversary Buick, recently presented. 3 wheel-bases. Lightning flash getaway. Masterpiece bodies by Fisher. Comfort and luxury in every mile. Power for the steepest hill and the longest run.

\$2,295 to \$2,875

Thirteen models of the LASALLE—Companion car to Cadillac. Smart Continental lines. 90-degree V-type 8 cylinder engine. Beautiful bodies by Fisher. Striking color combinations.

\$3,295 to \$7,000

Twenty-six models of the CADILLAC—The standard of the world. Famous 90-degree V-type 8 cylinder engine. Luxurious bodies by Fisher and Fleetwood. An extensive range of color and upholstery combinations.

(ALL PRICES FOB FACTORIES)

ALSO

Color Abnormality May Be Caused by Bacteria.

Red milk is an occasional abnormality and may be caused by bacteria getting into sour milk or cream, sometimes by way of the air. A ruptured blood vessel in the udder of the cow will often result in blood getting into the milk in sufficient quantities to color it red.

Scalding of all equipment coming into contact with milk is a practical control measure in combating color abnormalities caused by the growth of bacteria.

With bacteria, the problems is to keep them out, a job that may or may not be easy. Pasteurization will in most cases, if done soon enough, eliminate the trouble from the milk, but will not stop the trouble from occurring again in the next milking. On the other hand, if the color is due to causes other than bacteria, feed, physical ailments of the cow, etc., it will be necessary to meet the problem from another angle.

Silage Is Economical as Dairy Cattle Feed

Dairymen who have had silage that could be used in feeding dairy cattle this fall have not only secured higher returns during the fall months, but are likely to secure better returns during the winter. When cows are allowed to slacken up in their production during the fall months, it is often impossible to get them to respond satisfactorily to better feeding during the winter months.

R. R. Gillingham, tester for the Cedar County Cow Testing association.

reports that during the dry weather last fall there was an average drop of 4.5 pounds of butterfat per month per cow in herds which did not have silage, while the cows that were given silage showed very little reduction during the same period. Silage should be considered more than a winter feed.

Feed and Abundance

Cows cannot produce milk unless they have sufficient feed. The heavy producing cow cannot eat enough grass to supply her needs. She must have some additional dry feed. When the pastures get dry all the cows should be given some additional feed. Silage, alfalfa hay, or grain may be used or any combination of these. The fellow with the reputation of being a good feeder is usually an abundant feeder, and he is well repaid by the heavier milk flow obtained.

Chickens appreciate good shade and fresh water this time of the year.

Sweet or sour skim milk brings big returns when fed to either young or old poultry.

Feed mash to hens right through the summer. It will increase the egg production and profit.

Answered

Professor: "Can you give me an example of a commercial appliance used in ancient times?"

Student: "Yes, sir, the loose leaf system used in the Garden of Eden."—Ex.

Crescent Clippings

Mrs. Wm. Kauder and Eva Slatter visited at the A. Dorendorf home Sunday afternoon.

Why She Was Upset

What's the matter with Mrs. Upson? She was going merrily ahead with her vacation plans, but now she seems all upset?"

"A couple of children just came back from boarding school that she'd forgotten she had."—Judge.

More Sand

One balmy night recently a beautiful young girl sat on the sands at the bathing beach. Her bashful swain was by her side. She cuddled close to him and laid her head on his stalwart shoulder, but it brought no result, except that he stealthily kissed her hair, of which she was unaware. She sighed wistfully and looking up at him with soulful eyes whispered in a voice husky with emotion, "kiss me."

"I can't," he managed to articulate, "some sand got into my mouth."

"Then swallow it," she snapped. "If anybody ever needed sand you certainly are the guy."—Ex.

Success at Tailing

Don't call a man a failure unless you know what he was trying to do. Maybe his ambition was to get by without working—San Francisco Chronicle.

Growth of Habit

In our habits we are only masters of the beginning; their growth by gradual stages is imperceptible, like the growth of disease—Aristotle.

Oysters Top List

Oysters are more valuable than any other single product of the fisheries.

LOCAL NEWS

W. F. Behrens missed his calling. He should be manufacturing mechanical toys. There are two all-metal airplanes in the window of the Washington Water Power Co., that were made by him. They are operated by an electric current and are attracting a great deal of attention in town.

Mr. and Mrs. Jack Beehtol of Lewiston spent Sunday at the home of Mr. Beehtol's mother. Mrs. Beehtol left for Moscow this week where she will spend the winter. She has rented her house to Mr. and Mrs. Scott.

Rev. Franklin went to Dayton, Wash. the first of the week to spend his Thanksgiving vacation with his family.

Jesse Collins of Lewiston has been making extensive improvements in the brick house west of the John Waide property. The Jack Barnes family will occupy the house after the first of December.

Mr. and Mrs. Frank White received a telegram this week announcing the death of their youngest son, Stanley, who passed away at Savannah, Georgia. The funeral will be held at Savannah. No particulars were received concerning his death.

Mr. and Mrs. W. F. Albright and son, Fred, of Juliaetta, left Wednesday in their car for Portland. From there Mr. and Mrs. Albright will go to California to spend the winter.

Tom Fisher of Crescent left Tuesday in his car for Ashland, Oregon. After visiting a time there he expects to go to Southern California to spend the winter.

T. O. Green of Juliaetta was transacting business in Kendrick, Wednesday.

The bible class of the Presbyterian Sunday school held a very enjoyable party in the church basement last Friday evening. A large crowd was present and spent the evening playing games after which refreshments were served.

Mr. and Mrs. Otto Schupfer and family went to Lewiston last Sunday to visit Herman Schupfer, who is recovering from an operation at St. Joseph's hospital. Reports are that Herman is getting along very well.

R. E. Densow, cashier of the First National Bank of Lewiston, was transacting business in Kendrick the first of the week.

Mr. and Mrs. G. F. Walker spent the week end at Endicott, Wash.

Mr. and Mrs. Kester Dammarell and family moved to Craigmont this week where Mr. Dammarell has a position as assistant cashier of the bank at that place. He was formerly assistant cashier of the Farmers Bank of Kendrick. Mr. and Mrs. Dammarell have lived here for a good many years and have a large circle of friends who are reluctant to have them leave. They have been active in social affairs and will be missed here.

Mr. and Mrs. Ralph Knepper and family spent Thanksgiving day at the home of Dr. and Mrs. Hoyt in Spokane.

The Gazette went to press a day early this week on account of Thanksgiving falling on the regular press day.

Frank Chamberlain and his sister arrived last week from Chico, Calif., to look after property interests here. They expect to return to Chico soon where Mr. Chamberlain has purchased 40 acres of land and is improving it.

Order your Christmas cards at the Gazette office. Don't wait too long to place your order. 48-2

Cameron News

Mr. and Mrs. George Wilkens were in Lewiston, Monday of this week.

Mr. and Mrs. Fred Silflow drove to Mullan the first part of the week to visit with relatives. They will return the first part of next week.

George Ehlers was a business visitor in Lewiston, Monday and Tuesday.

Friends from far and near gathered at the home of George Ehlers for a surprise farewell party. The party was sponsored by the Ladies Aid. The guests

numbering upwards from sixty-five enjoyed the evening playing cards and games. A beautiful fountain pen was presented Mr. Ehlers, by Mrs. A. F. Wegner for the Ladies Aid, as a token of friendship. After enjoying a midnight supper, the guests departed. A wonderful time was had by all. We will all miss Mr. and Mrs. Ehlers, but wish them the best of luck in their future place of abode.

Mr. and Mrs. Gus Kruger and daughter, Rosalie, were in Lewiston, Tuesday.

Mrs. Ida Stoneburner, Miss Emma Hartung and Mr. Cridlebaugh were dinner guests at the home of Jake Berriman, Saturday evening. After dinner the evening was spent in playing pinochle.

Bill McCoy and family, and Frank and Arther Schoeffler, were guests at the home of W. H. Weyen, Sunday.

A. O. Wegner and wife were visitors in Lewiston, Tuesday.

Don't forget the play, "A Fortunate Calamity" to be presented by the P. T. A. the evening of December 7th at the Cameron school, at 8:00 o'clock sharp. This is a comedy-drama in three acts. A small admission will be charged. Adults 30c and children of school age, 15c.

Grandma Meyer spent a few days last week with Grandma Brammer.

Mrs. Ferdinand Silflow has been staying with the F. W. Silflow children the past week, while Mr. and Mrs. Silflow are in Mullan.

Mr. and Mrs. Jake Berriman were Lewiston visitors Tuesday.

Herman Ehlers of Deary visited with his brother, George, the past week.

George Ehlers and family will leave Cameron today, to take up their residence in Lewiston.

Dave Schoeffler left last Friday to work in the mines near Spokane. The two children, Frank and Arthur are going to stay with Wm. McCoy during his absence.

Leland News

The Woman's Missionary Society will meet all day Thursday, December 6th at the parsonage for their monthly business and devotional meeting. Mrs. Powell and Mrs. K. M. Smith will assist the hostess, Mrs. Walbeck, in serving.

The Woman's Missionary Society will have charge of the eleven o'clock service, Sunday, December 2. A program along missionary lines will be given.

Special effort is being made to make this a very interesting service. All are invited to attend.

BEN HUR TO BE SHOWN AT NEW KENDRICK THEATRE FOUR DAYS NEXT WEEK

The Greatest Motion Picture Ever Produced — Cost \$4,000,000

THREE YEARS TO MAKE IT!

Starting next Thursday evening, December 6th, the people of Kendrick and surrounding community will have the rare opportunity of seeing the greatest motion picture ever produced—"BEN HUR", which will appear at the New Kendrick Theatre for four days, Thursday, Friday and Saturday evenings, December 6, 7, and 8, and Sunday afternoon, December 9, at 3:00 o'clock.

Kathleen Key

The world's greatest show is coming here at last! Think of it—It took three years to make this mighty spectacle and cost over \$4,000,000, with a cast of 150,000 people! See the death-daring chariot race! See the thrilling sea battle! See the wonder of a thousand and one glamorous, breath-taking, stupendous scenes. Nothing like it ever before—and perhaps never again. This is one time that it will be hard to get a seat if you come late, so be one of the early ones and be sure of your seat. See large advertisement on page three of this issue for further particulars. —Adv.
