KENDRICK, LATAH COUNTY, IDAHO, FRIDAY, JUNE 21, 1929

No. 25

Celebrate July 3, 4, at Kendrick

DIVIDED HONORS IN FAST DOUBLE HEADER

Two Games Played Here Last Sunday in The Mud.

Kendrick divided honors with Bovill here last Sunday in the double header played in the afternoon. The attendance at the game was rather small, owing to the disagreeable weather. The games were played on a wet field and it was necessary to scatter shavings over the infield in order to partly cover the mud.

Both games were limited to seven innings, by agreement on the part of the managers. The first was won by the visitors 5 to 3. Infield errors on the part of the locals were responsible for the loss of the game. Riggs, tho not having his usual perfect control, pitched a good game but lacked support at critical periods. Many of these errors were excusable as it was a bad field on which to expect air tight baseball. Grabner, U. of I. chucker pitched a good game for Bovill but was weakening in the last two innings.

The second game went to the locals with a score of 3 to 2. In the last of the seventh the visitors narrowly missed tying the score. There were three men on bases and nobody down. In an attempt to steal home Jacoby was thrown out at home by Tony Eichner. The second out was made on a forced run to third and the last man flew out to Dammarell in left field.

Chilton pitched a dandy game for Bovill and Griffith for Kendrick was invincible for five innings. Types for Kendrick cut off three runs at home plate during the two games by some spectacular work.

Following are the high spots of the game in detail:

Details of First Game

BUILDING PAVILION FOR CELEBRATION

On Vacant Lot Across From The City Park.

G. P. Barnum started work the first of the week on the big dancing pavilion which will be used for the celebration here July 3 and 4. The dances will be in charge of Mr. Barnum. He has rented a canvas top and this has already been put up to protect the floor. The lumber is on the ground and everything in readiness to rush the construction work. The pavilion will be finished in ample time for the celebration.

Mr. Barnum has engaged the services of a Lewiston orchestra for the dances.

Remodeling Front

The Kendrick Machinery Co. is remodeling the front of its place of business this week. New Shelving for show window displays is being installed and the doors widened to make it possible to drive in from the front. The front is also to be given a new coat of paint.

Mr. Behrens has been busy the past month making new tractor-cultivators. He has a call for a number of these machines from a dealer in South Idaho.

Kulik for Boyd in 6th.

Japanese Women Try to Rid Tokyo of Graft

Japanese women prominent in the society of Tokyo have organized to free that city of grafters. The photograph shows some of them talking in the campaign against the corruptionists.

Latah County Officers Here

Sheriff Charles Summerfield and Deputy Sheriff Moody were in Kendrick, Tuesday, on business. In commenting on the capture of the five bandits near Juliaetta last Friday morning Mr. Summerfield said that Deputy Sheriff Miles Pierce, constable of Juliaetta, deserved a large share of the credit of rounding up the gang. It was he who captured the first three members of the outlaws and it was his action that led to the capture of the other two men by Constable Davis a few hours later.

Mr. Summerfield said he wished the people of this community to know that he appreciated the spirit of cooperation which the Latah county officers had received here and in Juliaetta during their search for the bandits.

Garage Front Nearly Finished

By the end of this week the new drive-in service station front of the Kendrick Garage Co. will be practically finished. A new gas and oil pump is being installed this week. Customers can be served with oil or gas right at the pump, which will be a saving in time. The new pump will be equipped with air pressure. This is a big improvement in the business of this enterprising firm.

Resolution

The following resolution was adopted at the last meeting of the Kendrick Commercial Club: "Whereas, at the March meeting, J. G. Gardner launched a movement for a Predatory Wild Bird Egg Gathering Contest, of which the club became sponsor under the direction of Mr. Gardner, initial funds for the contest were provided, the matter of prizes being left to the purses of the local sportsmen, the contest to terminate June 10, 1929. The prizes having been distributed to the boys this evening, and the endeavor being regarded as a highly successful one in every way, therefore be it

"Resolved, That the Club by rising vote express its appreciation for the good work done by the boys engaged in the contest, to the committee for their untiring zeal for success of the campaign, to the donors of prizes for their public spiritedness for the advance of true sportsmanship.

"On motion duly seconded the resolutions were adopted.

Mr. and Mrs. Theo Hansen of Troy spent the week end here at the home of Mr. and Mrs. George Leith.

WEDDING BELLS RING AT JULIAETTA SUNDAY

Ceremony at The Manford Nutt Home.

The home of Mr. and Mrs. Manford Nutt was the scene of a pretty five o'clock wedding, which was solemnized last Sunday evening, when Miss Crystall May Ottosen became the bride of Mr. Cecil Gruell.

Mrs. E. V. Adams sang "Oh, Promise Me" and "Always", before the ceremony and "I Love You Truly" at the close. She was accompanied by Mrs. B. W. McLorinan, who also played Mendelssohn's Wedding March. Rev. Haskell Tudor read the impressive ring ceremony.

The bride, who was given in marriage by her brother, Godfrey, was dressed in white satin and lace and wore a beautiful tulle and lace veil. She carried white American Beauty roses. Miss Lucille Gruell, acting as bridesmaid, wore an old rose taffeta dress and carried pink roses and snap dragons. The groom was attended by his brother, Albert. Louis Ottosen acted as ring-bearer and Leona Gruell and Donna Gene Lowery carried baskets of dainty flowers. Elaine McLarinan and Dorothy May Lowery acted as train bearers.

At the close of the ceremony, a reception followed and ice cream, cake, wafers and coffee were served.

Those who attended were: Mr. and Mrs. George Clausen of Troy, Oregon; Mrs. Francis Clausen, Miss Catherine Wilson, Mr. and Mrs. D. E. Buckallew of Clarkston, Wash.; Mr. and Mrs. Marion Gruell and sons of Astoria, Wash.; Miss Lucille Gruell of Lewiston; Mr. and Mrs. G. C. Ottosen and son, Mr. Chas. Barber, of Seattle, Wash.; Mrs. B. W. McLorinan and daughter of Tacoma, Wash.; Mrs. Hartley and daughters, Mr. L. D. Brown of Yuba City, Calif.; Rev. and Mrs. H. Tudor of Boulder, Mont.; Mrs. E. L. Lowery and children of Pocatello, Idaho; Mrs. Sam Gruell and children, Albert, Harold, Earl and Gertrude, Mr. and Mrs. Everett Custer and Leona; Mr. and Mrs. Henry Irwin and son, Lee; Mesdames, Groseclose, Adams, Baume, Alexander, McGlynn, and Mr. and Mrs. Manford Nutt. Mr. and Mrs. Gruell left that evening for Lewiston.

Bot Dairy Truck

John Kite, proprietor of the Home Dairy, this week purchased a covered delivery truck to be used on his milk route. This is one more added improvement to his dairy business.

Celebrate Golden Wedding

The home of Mr. and Mrs. Florian Schupfer of Juliaetta was the scene of a delightful occasion when a number of friends and relatives gathered there last Sunday to celebrate the golden wedding of this fine old couple. A big dinner was served at six o'clock by Mrs. Wm. Behrens and Mrs. Mike Hedler, daughters of Mr. and Mrs. Schupfer. A large wedding cake on which was the number "50", served as a centerpiece.

Rev. Ehlen made a very pleasing talk and congratulated the "bride and groom" on thus happily reaching the fiftieth milestone of their married life.

Those present were: Mr. and Mrs. Mike Hedler, Mr. and Mrs. Wm. Behrens and family, Rev. Otto Schupfer and family, Mr. and Mrs. Dave Denmar and family, Mrs. Kate Keller and daughter, Miss Hazel Talbot, Mrs. A. Schupfer, Mr. and Mrs. Herman Schupfer, Mr. Baker of Pomeroy, Mr. and Mrs. Marvin Long and Mr. and Mrs. Florian Schupfer.

Remodeling Brown's Hall

J. F. Brown has a crew of men at work remodeling the interior of his old theatre building. He is converting it into a dance hall, increasing the floor space by removing the stage at the rear end. Windows are being cut in the east wall for the purpose of furnishing better ventilation. Mr. Brown expects to give dances at regular intervals when the interior work is finished.

Both Legs? O. K.

They were standing at the front gate. "Won't you come into the parlor and sit a little while, Charles, dear?" "No, I guess not," said Charlie, hesitatingly. "I wish you would. It's awfully lonesome. Mother has gone out and father is upstairs groaning with rheumatism in his legs." "Both legs?" asked Charlie. "Yes, both legs." "Then I'll come in a little while."—Ex.

Couldn't Tell

A man drove hurriedly up to the station, bot a ticket, then as the train pulled in asked the agent: "Will I have time to go out to the car, say goodbye to my wife?" "How should I know," responded that functionary. "Depends on how long you've been married."—Ex.

P. G. Candler and family of Lewiston visited here Sunday.

WALDO W. SKUSE IS W. P. CO. AGRICULTURIST

To Advise With Farmers on Farm Electrification.

The appointment of Waldo W. Skuse as agriculturist for The Washington Water Power Company to advise with farmers on farm electrification, is announced by Lewis A. Lewis, Assistant General Manager in charge of sales. Mr. Skuse will work thru-out the territory served by the electric service company in eastern Washington and northern Idaho, and his work will relate to all types of farming to which electricity can be profitably applied.

Mr. Skuse is a graduate of the Washington State College in civil engineering and agriculture. Upon graduation he became Assistant County Agent at Spokane. Later he was County Agent at Helena, Montana, for three years and County Agent at Lewiston, Idaho for five years. During the last five years he has been engaged in the farm equipment business in Lewiston and Walla Walla.

"Mr. Skuse's familiarity with the various kinds of farm equipment, his educational training and his contact with farming problems in three districts of the Northwest have resulted in his selection as a man eminently fitted to study farm electrification on the system of The Washington Water Power Company," states Mr. Lewis. "The appointment of Mr. Skuse as agriculturist for this company is an outgrowth of the work of the Washington Committee on the Relation of Electricity to Agriculture which was begun four years ago. The company has always been among the leaders in studying farm problems and the application of electricity to them and the appointment of Mr. Skuse places it among the first utilities in the West to employ a man especially for this type of work."

National Guard at Boise

More than 800 Idaho national guardsmen are training at Camp Raymond C. Hill at Boise barracks in the annual two weeks' encampment allotted to national guardsmen by the war department. Daily reports show the division of officers and men to be about 86 officers and 805 men.

The units are given two weeks of intensive training in field maneuvers and in the use of the equipment with which they are furnished. The field artillery pieces have been firing in the hills back of the camp for several days and all Boise and the surrounding country knows the camp is in progress. Olive drab uniforms are frequent sights on the streets.

Guardsmen are there from all parts of Idaho. Three branches of the service are included in Idaho's units—engineers, cavalry and artillery. The following Idaho towns have soldiers in camp: Rigby, Pocatello, Gooding, Twin Falls, Buhl, Kimberly, Nampa, Boise, Caldwell, Payette, Weiser, Wilder, Coeur d'Alene and Lewiston.

Play at Elk River Sunday

The Kendrick ball team will go to Elk River, Sunday to play that hard hitting aggregation a return game. Kendrick will then have but one game left on the schedule and that will be here a week from Sunday with Genesee.

Installed Refrigerator Show Case

Morgans Grocery Market recently installed a refrigeration plant in the store the better to preserve perishable products. A gassed-in show case equipped with frosted pipes has been placed in the front of the store room.

Greenhorn Exposed By Campfire He Builds.

You can almost always identify a tenderfoot in the woods by looking at his camp," says a forester of the United States department of agriculture. "The experienced woodsman does not build a fire that has any of the three faults often found in the tenderfoot's fire."

"The tenderfoot often builds a fire too big for his need or for his convenience. He often builds it where it is likely to spread—either in dry grass or shrubbery, or against a dead log that may smoulder after his party leaves and then cause a destructive forest fire.

"The tenderfoot's fire often does not ignite easily or burn satisfactorily because he has used poor judgment in selecting kindling material and fuel.

A good camp fire for cooking is not so large that it cooks the cook too. A bed of hot coals is usually preferable to a blaze for cooking. The wise camper collects a few dry leaves and dead twigs and starts his fire small, adding larger sticks only as the fire will kindle them promptly. If the woods are wet it is usually possible to provide fuel by chopping off the surface of a dead log.

Never build a fire against a dead stump or log that may hold fire after the need for fire has passed. Build it away from tree and on bare ground or rocks. Dry grass, needles or leaves should be scraped away within a radius of 5 feet or so of the fire-place. It is often well to dig a shallow pit for the fire.

Above all, the wise camper knows how to put out his fire, and makes certain it is completely extinguished before he leaves. Pour water on the embers and stir them to make sure no sparks can rise. Then for additional safety toss on a few shovelfuls of dirt.

In the last year for which the forest service has records more than 2,500 forest fires were traceable to careless campers, and of course, many others could not be traced.

**GIRL, 18, MAY HAVE
BEAU, COURT RULES**

Great Modern Question Is Settled by Judge.

New York.—The weighty legal opinion involved that great modern question:

Might a girl of eighteen have a beau—or mightn't she?

All girlhood's future was at stake as pretty Josephine Pupica of Yonkers faced the bar of justice in Yonkers before Judge C. W. Boote.

Josephine had been hailed to court by her mother for running away to a relative's home because she would not live up to the parent's rules of never associating with boys, handing over all her weekly wages, never staying out later than 10 p. m. and never visiting girls at night.

The girl's lips quivered and she told the stern court:

"I had to run away, your honor. Listen to those rules."

So the judge listened and then he pondered. It may be that he thought of the time when he used to have an occasional date with a pretty brunette like Josephine.

"I will lay down some new rules," he declared.

"You may remain out later than 10 o'clock. Say 11 or thereabouts.

"You may keep some of your earnings for yourself and also you may visit other girls at night.

"You may select your own clothes."

"But," exclaimed the defendant, "er, how about a boy fr—"

The court interposed, a twinkle in his eye.

"Oh, yes," he remarked. "You may accept the attentions of a respectable young man."

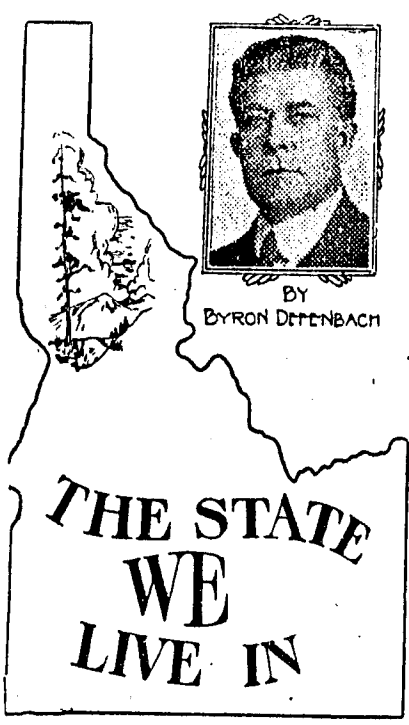

Josephine smiled. Girlhood had been freed from bondage!

Valley in Ocean

One of the deepest known spots in all the oceans is Nero Deep in the vicinity of Guam. Waters have been sounded to a depth of 30,000 feet with out finding bottom.

Keeps the Cattle Away.

Cattle will not allow young hazel, oak and most other trees and shrubs to survive in a pasture, says the American Forestry Magazine of Washington, but the thorn-armed bushes will flourish because their sharp thorns keep away the browsing cattle.

CEDAR POLES

In the corridors of the capitol at Boise, there has recently been installed a striking exhibit of the timber products of Idaho. Among the items is a miniature carload of Idaho cedar poles with the statement that a half million pieces of this commodity are shipped annually out of the state. Those of our people who live in the potato growing section may be inclined to dispute the statement here made, that the Idaho Red Cedar Pole is one of the state's most distinctive products.

Idaho produces about one-third of the total output of the entire western cedar-producing belt, which includes the section west of the Rocky Mountains north of central Oregon and well up into British Columbia. The town of Sandpoint, in Bonner county, is one of the largest shipping points in the country.

It is estimated that the production of this material employs 600 men 250 days a year, exclusive of labor used in treating and shipping.

Our cedar poles reach a very wide market, the bulk of them being used in the northern half of the United States in a field extending from coast to coast. They are also sold thruout Canada; occasional shipments are made to Mexico, Hawaii, and South America, and at this time large quantities are going to Alaska.

The qualities which make the Idaho products so much superior are extreme slenderness and small taper, light weight, and extraordinary durability.

The typical pole decreases in diameter toward the top at the rate of about one inch in seven feet. In other words, a pole seventy feet long, eight inches in diameter may be under eighteen inches across at the base.

At the town of Clarksfork there was formerly a cedar flagpole, over one hundred feet high, perfectly straight, with a base diameter under twenty inches.

Weight of the wood varies in different parts of the pole and is also affected by humidity and other external conditions. Cedar under normal conditions will lose thirty-five per cent of its weight in drying, and while other varieties of wood weigh up to or in excess of forty-eight pounds per cubic foot, the weight of thoroly dried cedar is about one-half this amount.

The durability of the wood is due partly to the fact that it is non-porous. Its construction is fibrous, and while it dries very rapidly it does not readily absorb moisture. Of recent years the practice of chemically treating the base of the pole has become almost universal.

A standard size will serve to illustrate interesting facts. A pole having a top diameter of eight inches and a length of forty feet is designated as an "8 inch 40". It is estimated that a cedar tree will reach this size at an age of ninety years, a fact to consider in any study of the problem of reforestation. When first cut it will weight 1200 pounds; when setsoned for shipment, 800 pounds.

Such a pole is worth about \$6.00 on the car at point of production, of which \$4.50 is labor and \$1.50 stumpage value. It will sell for \$14.50 wholesale in New York City, of which amount \$7.00 will be freight.

A Gazette "for sale" ad will get results. Try one.

Economical Transportation is the Reason

**Fire and Hail
Insurance**

Only a gamble of some sort can reduce a man from prosperity to poverty overnight.

Growing grain and beans without adequate fire and hail insurance is a gamble.

The surest guarantee against loss from the above uncontrollable causes is FIRE and HAIL INSURANCE.

All one can possibly "win" by non-insurance is in saving of a little premium-money. Oftentimes the uninsured man is actually risking several hundred dollars' worth of property for every dollar he thus retains.

Let us help you determine the right coverage for your holdings and provide you with sound economical insurance, thereby relieving you of any worry, anxiety or sleepless nights.

SULTAN OF SULU NOW AIR MINDED

Potentate Has Plane Ride and Enjoys It.

Washington.—The sultan of Sulu, one of the few Filipino potentates still ruling under the protection of the United States, has become air minded.

According to advices reaching the War department, the sultan was taken on his first airplane ride recently in an army machine and liked it.

A few years ago tribesmen in the Philippines were overcome with fear when the "giant birds" of the army soared overhead. They could not understand the roaring machines driven by army airmen on cross-country flights across the island and often the planes spread fear and consternation.

Then the sultan of Sulu visited Manila. He was invited for a short flight. Capt. Donald Wilson piloted the sultan 5,000 feet above the city.

The potentate's retinue waited with quaking hearts until the sultan landed safely and grinning over his novel experience. In short excited sentences he explained the sensations of flying to his aides. They immediately beseeched the army flyers to be taken up.

The pilots obligingly consented and others in the sultan's staff learned of the joys of soaring through boundless spaces far above the earth. News of their flights spread and the presidents of Bontoc expressed the desire for a short hop. Other members of the non-Christian tribes of the Philippine archipelago were flown and the news spread still further until the army air corps station in the islands was flooded with requests for flights in the "giant birds."

Teacher Urges "50-50 Dates" for Young Folks

Columbia, Mo.—Fifty-fifty dates for young men and women in college are advocated by Miss Nellie Lee Holt, instructor in religious education at Stephens college here.

Such dates are not only an economic necessity of the younger generation, Miss Holt believes, but are in keeping with the spirit of modern times.

Romantic Victorian love is dead, she points out, and in its place has grown a love based on "friendship, understanding and willingness on the part of the girl and boy to share responsibilities."

"Boys and girls should learn to share," said Miss Holt. "That is the reason I have become such a strong exponent of the 'Dutch' date. Generally speaking, girls receive as much allowance as boys. Then why shouldn't they pay for what they eat, for the show they attend and for the costly entertainment they enjoy?"

Girls of today, Miss Holt characterizes as "sound thinkers who do things in a wholesome and understanding way."

"Guardian Angel" Aids Travelers to Safety

Pilgrim Springs, Alaska.—One northwest Alaska trail has a strange guardian angel, according to a weird tale by travelers returning from a region over the Sawtooth mountains. In a valley across the range, they say, storms occur every day. The best dog teams are often bewildered. But when the visibility is exceptionally bad, so goes the story, drivers and their passengers are guided safely along the way by some well-outfitted form, resembling a hooded monk, who is always accompanied by a huge dog. Old-timers claim the monk is an apparition or mirage encountered as the temperatures in various attitudes change, but it is difficult to convince those who have encountered the mystic trail blazer.

NO LONGER DEPEND ON MIDNIGHT SUN

Electric Lights Installed by Eskimo in Arctic.

Edmonton, Alta.—No longer will the midnight sun reign supreme in the far reaches of the Arctic circle, according to word reaching here from officers of the Canadian Royal Mounted police whose duty it is to patrol that territory.

The story told illustrates the advance of modernism. The icy igloo associated with the Eskimo has gone. The kayak is still used for traveling on the water for short distances but gasoline motors and sturdier boats are also used. The marriage customs remain practically the same, but the exchange of wives is rapidly passing into the limbo of forgotten things.

More than all this, however, is the forsaking of the old seal-oil lamp for electricity.

According to the Mounties, Pavoo Polluk, Eskimo, whose home is up near Akalvik, within the Arctic circle, came out as far as a mission post. There he saw a lighting plant similar to those used on farms, in operation. He inquired the price. With the proceeds of his trapping and fishing he found he had sufficient cash to purchase one and did.

Loading it on sleighs he started back to his shack home, miles away. All the way he thought of the superior position the possession of such magic would give him, and the way seemed short. Arriving at his home he installed the plant according to directions and issued invitations to a house warming.

Eskimos from miles around came and when they were assembled Pavoo turned a switch. Shouts of surprise resounded as the bulbs burst into light. The guests were astounded.

Pavoo showed them how the switches worked, and then, one after the other, the visitors turned lights off and on. This lasted for hours until Pavoo had fed them all and sent them home.

Hypnosis Shows Anxiety Plays Havoc With Body

Atlanta, Ga.—New evidence that anxiety can play havoc with the body no less than with the mind has been obtained by use of hypnosis. The tests were made by Dr. J. C. Whitehorn, Dr. Helge Lundholm and G. E. Gardner of McLean hospital, Waverley, Mass., and were reported before the American Psychiatric association here.

The experiments indicate that when an individual becomes extremely anxious and fearful his body engine may race like a motor under pressure and strain. On the other hand, moods of depression, elation, or irritability do not appear to produce any certain increase in the metabolic rate, that is, the rate at which the body engine converts food into tissues and energy.

Obtaining data on bodily processes during an emotional state is difficult because an excited individual is not likely to remain sufficiently quiet to permit the making of accurate tests with apparatus. A psychologist who consented to be hypnotized was used for the tests.

Rebels' Tractor-Tanks Are Returned to Farms

Mexico City.—Farm tractors in Mexico led us hectic a life during the recent military rebellion as some of the participants themselves.

Among the "spoils of war" captured by the federals after the rebel retreat in Chihuahua were several farm tractors which had been commandeered from private ranches, armored by rebel blacksmiths and turned into war tanks.

The Mexicans dubbed them "Cochinitas" (little pigs) when they waddled up to the firing line for the first time. Several which have been brought here are now being de-armored and will be put back to their former peaceful pursuits.

Madrid Women Are Not Old-Fashioned

Madrid.—The women of "old Madrid" are by no means old-fashioned these days. Twenty-year-old Senorita Pilar Croaga, pretty student at the school of engineers in the capital, recently drove the Madrid-Gljon express train over 350 miles of winding and dangerous road.

Wants Burglars to Pay Rent for Tools

Butte, Mont.—Tired of having his place robbed of chisels and hammers, Al McLeod, Butte blacksmith, posted a prominent sign, "Burglar Tools for Rent." In his shop, hoping that prospective burglars will be thoughtful enough to pay him a small fee for the use of his tools in the future.

McLeod's shop has been broken into numerous times. Hammers and cold chisels were the only articles taken. On one occasion the thieves returned the stolen articles the night after they gained access to his shop, but other prospective burglars were not so thoughtful.

The "Burglar Tools for Rent" sign will be illuminated at night.

BANDED B'RD FLIES OVER SEA TO AFRICA

Route Followed Mystifying as Feat Itself.

Washington.—The finding of a dead bird on a bench in South Africa may unlock a secret which has long puzzled American naturalists.

The bird, an Arctic tern, carried a small metal band on one leg with the number 548,138 and, in abbreviated form, the address of the bureau of biological survey, United States Department of Agriculture.

O. L. Austin banded the tern at Turnevik bay, Labrador, on July 28, 1928. Four months later it was found in South Africa.

Scientists have recognized the Arctic tern as the Lindbergh of the bird world. It makes the longest migration of any bird, summering in the Arctic and wintering in the Antarctic. Eleven thousand miles to a winter resort is an all-time record.

What Route Is Mystery.

By what route does the Arctic tern fly from the North pole to the Antarctic? That has been the question. H. J. S. Heather of Durban, Natal, has communicated to the National Geographic society the circumstances of the important find, which may answer the question.

"The tern was picked up by Mr. Wackrill of Johannesburg, a few miles south of Port Shepstone. His discovery, the biological survey wrote the finder, was the most remarkable case that has been reported in any country. It suggests that the Arctic tern leaves the northern reaches of North America, flies to Portugal, crosses the length of Africa and then 'hops' to the Antarctic continent."

The new evidence adds about 2,000 miles to the previous 11,000 miles estimated airline flight of the species. The Arctic tern enjoys more daylight than any other living creature because it lives in regions where the sun never sets and only experiences night on its semiannual journeys across the equator.

Terns and other shore birds travel more widely than any other feathered creatures. The golden plover raises a brood in Ungava or northern Labrador and in the fall wings out over the ocean, never stopping until it reaches Bermuda. On it flies, pausing perhaps at the Bahamas, or the Lesser Antilles on the way to South America. The first of the golden plovers have been reported arriving in Paraguay before the last have left the breeding grounds. They "winter" on the Argentine pampas where the summer sun makes food plentiful.

Even unadventurous appearing warblers travel far to escape the cold breath of winter. Of our American species and subspecies twenty-two winter in the West Indies, forty-four go to Mexico, thirty-seven push on to Central America, while twenty-two reach South America. It is a fact for never ceasing wonder that some warblers and other small birds fly 500 miles across the Caribbean sea without resting.

Probably the most remarkable non-stop overseas flights are those of the Pacific golden plover. Coming south from Alaska it touches at the Aleutians and then takes off for Hawaii. It crosses 2,800 miles of open ocean. How plovers are able to locate the Hawaiian Islands in the middle of the Pacific is a mystery of nature.

Remarkable Flight Records.

Birds that nest in the southern hemisphere also have remarkable records for travel. The slender-billed shearwater makes a circuit of the Pacific ocean. It breeds in southern Australia, flies north along the Asia coast and returns south by the American coast.

Promotion of bird-banding has revealed many unknown and unsuspected facts of bird migrations and habits. Teltate bands have shown the male wren to be an extremely inconstant fellow who ought to be paying heavy worm alimony and have also supplied facts on which practical plans for the conservation of birds life can be made.

"At present nearly 1,200 banding stations are in operation in all parts of the country," writes E. V. Nelson, formerly head of the bureau of biological survey, in the National Geographic Magazine.

"The operators send the data regarding each individual bird banded to the bureau, which has established an indexed card file of such records. Widespread interest is expressed in reports of the capture of banded birds, of which 13,734, representing about two hundred species, have been taken, either alive or dead."

Farmer Catches Muskrat, Then State Exacts Fine

Billings, Mont.—Just because he caught a muskrat by the tail and impounded him in a box with the idea of starting a muskrat farm, F. G. Kell was fined \$25 for possessing a fur-bearing animal without having obtained the proper permit or license for its capture. The muskrat was running around in Kell's barn when the capture was made.

Sights Whale School

Eureka, Calif.—One of the largest school of whales seen off the coast near here in recent years was reported by Capt. Willard Cousins. Cousins said there appeared to be about fifty of the marine monsters in the school. The spouts thrown up by the whales, according to Cousins, resembled a field of geysers.

GARB DOESN'T MAKE THE MAN IN RUSSIA

Sheer Necessity Forces Outlawry of Style.

Moscow.—In the Soviet capital, at least, clothes do not make the man; nor the woman, for that matter. Style is among the antiquated "bourgeois" notions thrown into discard by the Bolshevik revolution.

Sheer necessity—the lack of textiles and of cash—had more to do with outlawing style than did Communist principles. In the bitter years of civil strife and famine people were happy enough to have their bodies covered without bothering about the cut or color of the covering. While conditions are incomparably better, those who can afford to worry about the hang of their trousers or their skirts are still a small minority.

Many men, of course, throw off the yoke of a tailored jacket for the freedom of a peasant blouse out of revolutionary ardor; but the overwhelming majority did so because their jackets had fallen to pieces and they could not buy a new one.

The Russian Flapper.
A generation of Russian girls adopted rough boyish attire and scoffed at female finery. One may be pardoned for guessing, however, that many of them were making a virtue of necessity. Certainly the first sign of easier economic conditions here, as in the rest of the world, was the better-dressed young woman. The Russian "flapper"—a boy's cap pulled rakishly over her close-cropped head and a man's overcoat over her nondescript dress—is definitely on the decline.

Between poverty and principle, however, style has fared badly enough. Anything but stark nakedness (and the rigors of Russian climate discourage that) passes muster. Moscow undoubtedly holds the world record for diversity of costume. The queerest sartorial combinations will attract not the slightest attention on Moscow streets. The most grotesque patch-work passes unnoticed.

Can't Judge by Clothes.
Another result of the discarding of style is that one can no longer judge anyone's social status from his or her clothes. The fellow you bump into on the stairway may be the commissar or the humblest of his clerks—you can't tell from his apparel. Indeed, if he shows a tendency towards elegant European dress he is most likely to be the clerk.

Foreigners who have visited Moscow over a period of years agree that in general people here are enormously better dressed than a few years ago, although the standard is still far below western Europe, or even a city like Warsaw. Smartly dressed women are more in evidence and the popularity of "Modes," a pitiful little magazine devoted to the Paris fashions, may be a sign of the times.

Fruit Growers Profit From Europe's Winter

Lindsay, Calif.—The "It's an ill wind—" adage was borne out literally in Europe this year, with California orange growers reaping the benefit of the suffering of European growers.

The most severe European winter in 230 years caused great damage to the Spanish citrus crop, next largest in the world to that of California.

One result was that the California Fruit Growers' exchange has already moved its first shipment of oranges to Europe, docking in London the latter part of April. Others are being loaded, and before the season ends it is estimated California citrus growers will have benefited to the extent of marketing 2,500 carloads of their product that never would have been able to compete with European growers under ordinary circumstances.

The extra market proved extremely fortuitous to California growers, burdened with an unusually large Valencia crop. It is estimated more than 1,600,000 boxes of oranges will go to Europe this season at prices that will net the grower from \$2 to \$4 a box.

New Hampshire Man Has Wagon 113 Years Old

Franklin, N. H.—Frank H. Gerlach says he owns a wagon one hundred and thirteen years old and in perfect running condition. It has original

tires and paint, he says, and he has absolute proof as to its age.

It is said to be one of the very first wagons that Abbott Downing, the famous builder of the Concord coach, constructed. It has no springs similar to the leaf springs in use on wagons and automobiles today, but it nevertheless rides like a cradle. In place of springs there are leather straps running from the front to the rear axles and the body of the wagon is suspended upon these similar to the manner in which the stage coaches were constructed.

At the places on the leather where the front wheels hit when the wagon is turned there is a protection in the shape of steel plates to prevent the tires from wearing out the leather.

Orders Dress for Maid Tattooed on Tar's Arm

Lynn, Mass.—Gordon Smith wanted to join the navy. He passed the mental and physical examinations, but during the latter process, recruiting officers discovered the tattooed figure of a nude woman on his arm. Before approving his enlistment papers they forced him to have a dress tattooed on the offending picture.

Fish Worm Ranching Is New Western Industry

Los Angeles, Calif.—The Flapper Fish Worm ranch is located in the small town of Bishop at the eastern base of the Sierra Nevada in southern California, the proprietor of which, says John L. Von Blon, writing in "Field and Stream," is a sunny-haired high school student of seventeen.

Working on the sagacious principle as stated by herself—"any poor fish from the common human sucker to the golden aristocrats of the trout family will fall for a flapper"—she has developed an industry which turned out 20,000 worms for the opening-day sales.

"Ten acres is the whole extent of the ranch. Through it all the earthworms may burrow but the plot actually devoted to them comprises but 2,000 square feet. It is a patch of straw, hay, corn fodder and other decomposed materials about a foot in depth, with a pit four feet square in the center, where is sunk a bottomless box in which the breeding processes are carried on. As a protection against poultry, shrews, moles and other creatures of which the worms are natural prey and food, there is a screen cover.

"This nest is kept damp. Sour milk, cheese and bread crumbs, cornmeal, eggs and all sorts of table

scraps are thrown into the box. The continuous propagating results are astonishing.

"Tiny worms emerge by millions from the cocoons in which the eggs have been laid. Soon they begin to make their blind ways to the outer edges—blind, because they have no eyes, but are guided by primitive, light-detecting organs. In due course they are dug up from the muck and placed where they can be packed for market on short notice."

Reform School Lads Needn't Learn to Sew

Sacramento, Calif.—Sewing was ordered removed from the list of subjects taught incorrigible youths at the Preston reform school at lone by E. E. Jensen, state director of institutions.

All the sewing equipment is to be transferred from the reformatory to the woman's ward at San Quentin prison, where, Jensen believes, it will be put to better use.

"The boys never did take to sewing," remarked the director, "they don't see any future in it for them."

Narcotic Addicts Turn to Use of Chloroform

Butte, Mont.—Increased obstacles placed in the paths of drug addicts have turned many narcotic users to chloroform, a veteran Butte physician declared. It is the practice in many Butte homes, he said, to use a few drops of chloroform to ease excitement and quiet nerves after a party.

Locate Iron Messenger of Space in Africa

Bloemfontein, South Africa.—Again chance has led to the discovery of one of those mysterious messengers that bear evidence that space is not empty. This time the news comes from the far northeastern corner of southwest Africa.

In the Grootfontein district a meteor lies in a tomb of limestone, a great, massive block of iron. There is nothing dramatic in its appearance—a lone block of metal in the veldt, but if one tries to visualize its arrival one finds a spectacle surpassed by few.

A black mass of iron, cruising through space, invisible to all. Suddenly, as it enters the earth's atmosphere. Its great speed and the excessive friction set a blaze in a fraction of a second. An enormous fireball, white hot, it approaches the ground with an angry hiss. A terrific roar

as it crashes through layers of limestone, a shower of sparks, sand, rocks and metals, a cloud of dust—and all is quiet.

A deep pit was excavated all around it, to show the full extent of its huge mass. The whole appearance is remarkable—an almost flat, level upper surface 9 by 10 feet in size, with almost vertical sides about four to five feet deep. It is estimated that it weighs not less than 50 tons.

One specimen shown to the writer was a piece that had needed but the sawing through of a surface of two square inches, and that had required fully two hours of hard work.

11,500,000 Wed in India Under Age of Fifteen

London.—The extent of child marriage in India was shown recently by official figures which reveal that there are 8,500,000 wives and 3,000,000 husbands under fifteen years of age.

The figures are contained in a new statistical abstract for India, which the secretary of state for India has just distributed to the members of parliament.

According to these statistics, there are 110,694 husbands and 218,463 wives under five years of age, while 575,405 husbands and 2,016,687 wives are between the ages of five and ten. The total jumps still higher between the ages of ten and fifteen, with 2,334,000 husbands and 6,330,267 wives. Between fifteen and twenty there are about 4,000,000 husbands and 9,000,000 wives.

The figures also show that about 400,000 Indian girls are widows before the age of fifteen. Of these, 15,139 are baby widows under five years of

age, 102,208 between five and ten, and 279,124 between ten and fifteen.

To Show Auto Speed

Boston, Mass.—Automobiles in Massachusetts would be equipped with varicolored lights to show the speed at which the machine was traveling under the bill being considered by the state legislature.

Many Important Crops Ruined by Insect Pest

Washington.—Man's battle to master insect pests that annually destroy one-tenth of the crops in the United States is an uphill struggle which may never be wholly won, Dr. A. L. Quaintance said. Damage will be much heavier this year unless the Mediterranean fly which has just appeared in

Florida is checked.

Telling of the effects of science to reduce the damage by the insect scourge, Doctor Quaintance said many important crops could not be grown without the entomologists.

Without the checks now provided by science, insects would multiply so rapidly the world would soon be completely overrun, he said. Insects have several million descendants in the course of a year.

Coconut Economy

In the South seas coconuts have many uses—the milk is drunk; the sap of the tree, boiled and fermented, makes palm wine; the fruit is eaten, leaves make roof thatch for huts, the splints make baskets, the coconut shells are useful dishes and the oil is used for rubbing the body

DR. W. W. COOK, SPECIALIST
in Internal Medicine

Does Not Operate

will be at the
MOSCOW HOTEL
Thursday, June 27
Office hours: 9 a. m. to 3 p. m.

ONE DAY ONLY

No Charge for Consultation

Dr. W. W. Cook is a regular graduate in medicine and surgery and is licensed in the State of Idaho.

He visits professionally the more important towns and cities and offers to all who call on this trip free consultation, except the expense of treatment when desired.

According to his method of treatment, he does not operate for chronic appendicitis, gall stones, ulcers of stomach, tonsils or adenoids.

He has to his credit wonderful results in diseases of the stomach, liver, bowels, blood, skin, nerves, heart, kidney, bladder, bed wetting, catarrah, weak lungs, leg ulcers, rheumatism, sciatica, and rectal ailments.

If you have been ailing for any length of time and do not get any better, do not fail to call, as improper measures rather than disease are very often the cause of your long standing trouble.

Remember above date, that consultation on this trip will be free and that his treatment is different.

Married women must be accompanied by their husbands.
Address: 224 Bradbury Bldg., Los Angeles, California. 23-3

Poultry Houses Badly Infested With Vermin

When a poultry house becomes badly infested with mites, it is hard to control them with one application of any material. Mites may gather in the walls and around the ceiling and under the dropping boards or behind insulating material in the walls. They depend on the blood of the roosting bird as a means to live and if the perches are treated about once each week for a few weeks, all the mites in the house will eventually gather there and be killed. The nests often need considerable spraying, especially if they consist of boxes nailed on the side walls of the house.

By adding a little carbollinum to the kerosene oil or engine oil, the mixture will have greater powers for destroying mites. It may be best to paint the roosts, dropping boards, and nests with clear carbollinum. If the side walls are rough and infested with mites, it may be best to whitewash them to seal up a lot of crevices and make the surface as smooth as possible. When the roosts are protected with spray dope often enough to keep down mites, they are not so apt to become entrenched in other parts of the house.

Poultry Facts

Dirty poultry houses harbor disease.

Moldy feed or moldy litter may give the baby chicks pneumonia.

In order to secure top prices for eggs on the market, they must be of high quality.

One of the newer developments in chick raising is the use of electrically heated incubators and brooders.

Move the brooder houses to fresh ground two or three times during the season in order to keep the young birds healthy.

Feed hopper space, not too much and not too little, is a big factor in determining feed consumption and growth of chicks.

To hatch a desirable chick, hatching eggs should weigh between 24 and 26 ounces per dozen, and should be uniform in shape, size, and color.

Root vegetables, such as mangels, beets, carrots, etc., are good, but not as good for green feed as the plant that grows above the ground.

Keep things as sanitary as possible around the growing chicks. The worst enemy and best preventive of coccidiosis is clean ground, clean water, clean feed, and clean houses.

JUST IDAHO

By Guy Flenner

In Confidence There is Strength

The Idaho Bankers association will hold its annual convention at Idaho Falls on June 24-25. It is expected this convention will attract the largest attendance in the history of the association on account of fresh banking problems, some of them occasioned by new banking legislation. Some of these laws impose additional duties and responsibilities on the banks. There are provisions relating to the protection of the depositors and to the tax gathering agencies of the state that will be clarified. Banking relations to the growing industrial and commercial life of the state will be considered and further steps taken to assist in the development, protection and guidance of agriculture.

It is with these latter subjects that the public is mostly interested, although new laws with reference to inheritance taxes and the duties of banks bearing thereon, especially with reference to safety deposits, are of popular concern.

The marked growth of safety deposits, indicative of a spirit of reasonable thrift and the preference of Idaho people for safety against risk through dubious investments, is responsible for building up much of the banking reserve in this state, for strengthening all lines of business and for bringing additional responsibilities to the bankers. The public confidence in our banks is inspired by safeguards, provided not only by law but by the bankers themselves, which are discussed and decided on largely at their conventions.

The groundwork for Idaho's financial stability rests in its banking institutions, which will grow and become more and more beneficial in proportion as there is mutual interest on the part of banks and public.

So much, indeed, depends upon the integrity of the one and the cooperative spirit of the other that any serious disturbance of either is provocative of baleful conditions for every business interest and for every home in Idaho.

Spring and Advertising

Effectiveness of newspaper advertising was never more convincingly shown than during a backward spring all over the country. The public was not in a buying mood; the merchants had stocked heavily, calculating upon normal weather conditions. The goods must be moved. The public was induced to buy what it really needed, but which was being deferred, through the medium of advertising—extensively and intelligently used. The goods were moved. The power of printer's ink was again demonstrated.

Health Chief Urges Planes for Funerals

San Francisco.—Airplane funerals were advocated here recently by Dr. William C. Hassler, city health officer, as a means of solving the avowed problem of shrinking space for burial grounds. He said San Francisco's available acreage will be exhausted in another 25 years and predicted that the last resort is the Sierra ranges or the ocean. Either can be reached readily by airplane, he said, in a few hours from any part of California.

Agricultural Hints

In 1900, 45 per cent of the acreage of tame hay was devoted to timothy; whereas in 1927 only 15 per cent was timothy.

Order them on time—these baby chicks—if you want the pullets to lay next fall, and the broilers to hit the early market.

From the standpoint of cleanliness and disease prevention, it is an excellent idea to whitewash the inside of a poultry house. Lime is a good disinfectant.

Barley is a cheap feed and is often included in the scratch feed because of its variety. It seems to contain more feed value than oats but less than corn.

Peach and other tender trees shouldn't be pruned until the buds start—or even till after the blossoms fall. Then the full damage done by Jack Frost can be seen and trimmed away—and maybe no pruning at all will be needed.

Idaho Special 4-Row Bean Cultivator
Built by W. F. Behrens

Mr. Farmer, did you ever stop to think what a saving in hoeing expense can be made? These cultivators, pushed by a Cletrac, will cultivate nearly as much as 10 men can do in one day with horses and think the many weary miles of walking it will save you. That is not all. All those who own one of these cultivators will enjoy the pleasure of cutting Four rows of beans at a time with this same cultivator by simply taking off the teeth and fastening cutter blades in place on the same frame.

Two Machines in One

We are now at work building these cutters. Within a short time one complete 4-Row Bean Cutter will be on display. Come and see it. We will sell these machines at a very reasonable price.

All you owe me is a visit. Bring your car, your tractor, sewing machine, alarm clock—We fix 'em. If we can't, it costs you nothing.

We Have on Hand

One used 30 Cletrac, one 12-20 Cletrac, one 12-20 Twin City, one Fordson, one Holt 20, one Cletrac 20—real buys.

Mr. and Mrs. C. C. Jackson and daughter, arrived from Vancouver, Wash., Tuesday, to spend several days with relatives.

Snake Bite Fatal to Reptile Expert

Serum Injections Fail to Halt Deadly Poison.

New York.—For more than 30 years Charles E. Snyder, former head keeper of mammals and reptiles at the New York zoological garden in Bronx park, befriended snakes.

He fed them, made pets of some, and pointed to their comparative harmlessness and utility in public lectures.

His interest in reptiles led the veteran keeper on periodic trips to capture more of them. One morning, in the Ramapo mountains, one of them struck for the liberty of its mate, which was almost in Snyder's grasp. The former keeper died, a victim of rattlesnake poison which anti-venom serum failed to halt.

Serum Rushed to Hospital.

Dr. Raymond L. Dittmars, curator of mammals and reptiles at the Bronx zoo, had rushed serum to him at the Good Samaritan hospital in Suffern, N. Y.

Snyder, who was fifty-seven, died about 24 hours after the two poison fangs had sunk into the back of his left hand. It took him five hours to reach the hospital, a delay which was held responsible for his death, although even after such a lapse of time the failure of the serum to counteract the poison was considered unusual.

There was no trepidation in Snyder's mind as he struck into the Ramapo woods, accompanied by Paul Snyder, a friend and snake enthusiast.

They were on Little Tor mountain, pursuing separate trails 100 yards apart, when Snyder saw a rattler between four and five feet long gliding over a rock ledge near his feet.

As the snake squirmed into a crevasse Snyder ducked to catch its tail so that he might swing it out with a quick jerk into the open and pin it with a forked stick he was carrying.

Sinks Fangs In Hand.

As he stooped, another snake, apparently the mate of the first reptile, lunged from a hiding place in the grass. It sank its fangs into the hand. Snyder shrunk back calling to his friend, and the reptiles took to cover.

With his companion at his side, Snyder sucked the two wounds, sought to squeeze out the poison and used a handkerchief as a tourniquet about his arm to shut off the circulation. Hospital and serum treatment followed, but to no avail.

Alfalfa hay has a ready market now. A large increase in acreage would have to be marketed principally through live stock.

Chicks grow most rapidly the first few weeks. Since protein is needed for growth it should be fed in large amounts at first and in lesser amounts as the chicks grow older.
