

# Ready For Grand Celebration

## CAVENDISH BOY SHOTS HIS FATHER

### Then Attempts Suicide With The Same Weapon.

Tribune: Raymond Mathews deliberately planned to kill his father, Lee Mathews, prominent Cavendish farmer, he admitted in a lengthy confession obtained Wednesday afternoon during a four hours' grilling by county officials. He said he "made up his mind suddenly" Monday evening after dinner while lying on the couch in the parlor at the family farm home.

A partial confession, obtained without great effort on the part of officials, was offered Monday morning when County Physician J. M. Lyle and sheriff Harry Dent were in Raymond's cell tending his wounds which he inflicted after he shot his father. From 11 a. m. to 3 p. m. yesterday, the prosecuting attorney and officials took from the boy his complete story.

The story told Wednesday was the third version of the killing as told by the 20-year-old farm lad, who at first maintained that he did not see his father on the porch until after he looked up after the gun was accidentally fired and "seen him quiver."

At first the boy told a story of having been shot by the same bullet that drilled a clean hole in the back of the father's skull between the ears. Told by Coroner E. M. Brower that this could not have happened, he admitted shooting twice, the second time trying to slay himself after accidentally killing the man.

The second admission came only after a coroner's jury had been summoned at 4 a. m. Monday morning from Southwick to hear the story, but still the boy claimed that it was an accident and that he did not even know the porch was occupied.

Finally, Wednesday, while the doctor was dressing his wounds he brought out in his conversation that he killed the aged man and a copy of his confession was hastily begun after assembling officials.

The detailed story of the killing shows, according to Prosecutor R. E. Durham, a preconceived plan to slay his father and upon those grounds a murder charge will probably be filed, Durham said.

Raymond told of having spent the afternoon of Monday shooting squirrels and "just roasting around" the country about Cavendish. After the family had eaten their evening meal, Raymond laid down to rest upon the couch while his father went to the porch to sit in his chair and read a magazine.

Raymond said he "suddenly decided to kill him." He got up from the couch, went to his room where he kept the gun and obtained a cartridge from a fresh box of shells. He inserted the bullet and, while his left hand steadied the barrel of the gun, he sighted the muzzle for his father's head just between the ears. When the bullet struck Mr. Mathews he merely slumped forward in the chair, Raymond said.

After killing his father, Raymond then decided to do away with his own life, he said, and placing another bullet in the gun he fired a second time, the muzzle only about an inch and one-half from his body. He broke the gun stock in falling upon it, he told the officers.

At the time Coroner E. M. Brower and Sheriff Harry Dent arrived on the scene of the killing, they requested Raymond to show them the box from which the shells were taken. It is believed that their conviction of the two missing shells as being the two that took effect, finally broke down the boy's resistance at the coroner's inquiry before a

## Shipping Cedar Poles

The pole yard at the east end of town is a busy place these days. Cedar poles are being hauled in from the country back of Crescent and Southwick. A number of trucks are engaged to bring them in from the woods. They are then loaded here and shipped out at the rate of from 10 to 15 carloads a week. Several companies are buying poles here this year.

## Juliaetta Picking Cherries

By the first of next week, weather conditions permitting, the Juliaetta cherry harvest should be in full swing and carload shipments will soon be leaving at frequent intervals.

This year packing will be by the Northern Packing company of Lewiston and the Earl Fruit company will ship them. The Juliaetta Cherry Growers association will receive the fruit at its packing house in Juliaetta.

Nearly the entire crop from the Clearwater district will go through the Juliaetta Cherry Growers' Association.

Present estimates are that approximately 30 carloads of cherries will be handled through the Juliaetta association against 20 carloads shipped during any year preceding. The cherries will consist of Bings, Lamberts and Royal Annes.

## Advertising Celebration

Booster caravans promoting the big celebration to be held here July 3 and 4, have visited nearby towns the last three days. Gus Blum took a car full of pretty girls to Uniontown, Wednesday, to talk up the two big days here next week. Yesterday several cars with a pep band, a number of boosters and more pretty girls went to Moscow, Troy, Bovill and Deary. Today a fife and drum corps, more boosters and still more pretty girls went to Orofino and Peck.

As a result of this booster stunt the people in the towns visited will have no doubt that Kendrick is going to celebrate.

## Bad Fire at Culesac

A fire which was discovered early Monday morning in Albert Sogard's general merchandise store, damaged the stock and building to the extent of \$13,000. It is believed the blaze was caused by yeggs, as the combination of the safe had been hammered off.

A call was sent to the Lewiston fire department for their pumper, which was sent to Culesac immediately, arriving there in 35 minutes. Hooking the truck pump to the local mains, Lewiston firemen obtained 75 pounds of pressure, which was enough to reach the flames and extinguish them.

Insurance to the amount of \$3,000 was carried on the stock and \$8,000 on the building.

Margaret Broeke visited her brother, Frank, in Troy Monday.

Just after the killing, Mrs. Mathews seemed to be defending the boy. She said that at the time she was looking under the porch for some puppies when she heard the first shot. She said that she did not think she heard a second shot.

It is practically impossible, according to the officials, to engage the boy in an intelligible conversation. He is obviously in a state of excitement and fear but yesterday seemed to relax somewhat following the confession.

Dr. Lyle made an investigation with a view towards determining the boy's sanity, but made no announcement of his findings yesterday.

## Following is The Program For Both Big Days.

### Everything All Set For Big Time in Kendrick Next Wednesday And Thursday.

#### JULY THIRD

Noon ..... Concert by the Kendrick Band

1:00 P. M. Program of Sports R. H. Ramey Chairman

Judges of Events ..... Wade Keene, R. B. Parks, Ben Callison

Judges of Parade ..... Wm. Cox, R. B. Parks, Ole Lien

Dancing, rain or shine; Canvas top pavilion, good music good floor.

Picnic Grounds — Free ice — Everybody welcome.

A royal good time assured all.

## U. B. Conference at Southwick

The Idaho Annual conference of the United Brethren in Christ convened at Southwick, Idaho, June 27, at 9 a. m. Bishop F. L. Hoskins of Myrtle, Idaho, presided.

The conference was preceded by song and preaching services, which will take place each evening starting at 8 o'clock. All members are urged to be present and all others are cordially invited to attend both business and preaching services. A basket dinner will be given Sunday. S. M. Mathes, Pastor.

## Potent Medicine

A doctor left a thermometer with the wife of a patient, and told her to take her husband's temperature every hour and to call him if he got any worse. When he returned to the house in the morning, the patient was missing and the doctor asked what happened.

"I broke the thermometer," said the woman, "so I used the barometer. It registered 'very dry', so I gave him about a pint of corn liquor and I swear he got up and went out and went to plowing in the back field."—Ex.

## Genesee Plays Here Sunday

The last game of the White Pine-Latah league will be played here Sunday with Genesee. The dope is that if the breaks are even it will be a hard fought battle. Last Sunday Genesee won over Elk River by a one-score margin in the morning game and in the afternoon Kendrick did the same.

The visitors will be here with the best they've got and that means a good ball team.

Don't miss this game. Come out and help the home team win.

## May Consolidate School Districts

A petition liberally signed by residents of Bear ridge was presented to Latah county commissioners in session at Moscow, Tuesday, asking permission to hold an election to vote on the consolidation of school districts No. 38 and 55. These districts are known as Taney and Rimrock.

One of the main issues stated in the petition is that it will be more economical to operate as a consolidated district. In the event that the consolidation carries, the school house in district 55 will be abandoned.

Miss Ellen Peterson, county superintendent, has recommended that the districts be consolidated. It is said that not enough pupils are living in district 55 to make it possible to continue the school there. If the districts are consolidated only one teacher will be hired.

The commissioners appointed Wade Keene, Zack Aas and Ed Halseth, district 38, and A. W. Jones, A. Kleth and J. W. Emmett, district 55, as judges and clerks of election.

## The Hon. Banana

(Essay by a Japanese school boy)

The banana are a remarkable fruit. He are constructed in the same architectural style as Hon. Sausage. Difference being skin of sausage are habitually consumed, while it are not advisable to eat rapping of banana.

Perhaps are also intrusting the following difference between the two subjects. Banana are held aloft while consuming; sausage usually left in reclining position. Banana are first green in color, then gradual turn jallowish. Sausage start out with indifferent color (resemble terrier cotta) and retain same hue indefinitely.

Sausage depends for creation, etc., upon human being or stuffing machine, while banana are pristine product of Hon. Mother Nature. Both article resemble the other in that neither have pit or colonel of any kind.

In case of sausage, both conclusions are attached to other sausages. Hon. Banana, on other hand, are joined on one end to stem; other termination are entirely loose.

And finally, banana are entirely member of vagitable kingdom, while affiliation of sausage are often undecided.—Pathfinder.

## Bean Prospects Good

Claud Craig stated this week that he had 350 acres of beans on the Potlatch this season and they give promise of being one of the best crops he has ever raised. He planted most of them early and some fields are already in bloom. With ordinarily favorable weather conditions he should have a bumper crop.

Mr. Craig said he never saw crops in general on the Potlatch look better than they do this season.

Mr. and Mrs. Philip Asplund and family of Troy, Mr. and Mrs. Kester Dammarell and family of Reubens spent Sunday here at the home of Mr. and Mrs. E. H. Dammarell.

## KENDRICK WINS ONE MORE BALL GAME

Defeats Elk River by Score of 3 To 4.

One of the snappiest ball games played in the White Pine-Latah league this season was pulled off last Sunday at Elk River, when Kendrick held a one-run lead at the end of the ninth.

For six innings Elk River played big league ball and held the visitors to a blank, in the meantime netting 3 runs for themselves. But the seventh was a lucky period for Kendrick and when the smoke cleared away it was discovered that the score was tied 3-3.

Kendrick came to bat in the eighth and with a man on second Bill McCall stepped to the plate and smashed a line drive into right field, scoring the winning run.

In the last of the ninth, Elk River had a man on first and one down. Campbell, Elk River's chucker, hit a fast line drive just inside the first base line. McCall made a beautiful catch, touched first base and the game was over. It was one of the fastest unassisted doubles seen for many moons.

Clark, centerfield for Elk River pulled a sensational play when he ran back into the down timber and jungles and robbed McCall of a home run. It was a beautiful catch and brought the rosters to their feet with a roar. Next Sunday's game will be played here with Genesee. It promises to be a thriller.

The following gives an account of the other league games last Sunday, the games to be played this Sunday and the present league standing:

## Results Last Sunday

Potlatch 7, Troy 0.
Potlatch 21, Troy 1.
Kendrick 4, Elk River 3.
Genesee 5, Elk River 4.
Bovill 14, Genesee 13.

## Games Sunday, June 30

Genesee at Kendrick.
Potlatch at Elk River.
Open dates for Troy and Bovill.

## League Standing

	Won	Lost	PC.
Potlatch .....	6	2	.750
Bovill .....	6	3	.667
Kendrick .....	5	4	.556
Genesee .....	4	5	.444
Troy .....	3	6	.333
Elk River .....	2	6	.250

## Pavilion Dance Tonight

The first dance in George Barnum's new pavilion will be held tonight. The floor has been put in perfect condition with an electric sander. It is by far the best dance pavilion ever put up in Kendrick. A big crowd is expected to attend the dance tonight. Music will be furnished by a good orchestra. Everybody is invited to come and have a big time.

## Just Misplaced Commas

If you think it isn't important to put such an insignificant little thing as a comma in its right place, see what you can do by deliberately misplacing a few as Mrs. Mary I. Baslew, Hollywood, Ark., did in the following:

"Herbert Hoover then entered upon his head, a white hat upon his feet, large but well-polished boots upon his brow, a dark cloud in his hand, his faithful walking stick in his eye, a dark, menacing glare saying nothing. —Capper's Weekly.

Mr. and Mrs. George Crow of Honolulu and Mrs. Stanley Talbott of Lewiston visited at the home of Mr. and Mrs. H. P. Hull last Friday. This is the first time Mr. Crow has been in Kendrick since he left here some twenty years ago.

# Let This Store Fit You Out For The Fourth

#### 222 To 1

An interesting contribution to the lore of advertising results comes from a business statistician, Roger W. Babson. According to his statement in Cleveland on Monday, he broadcast an advertisement at a cost of \$3,000 and received 16 inquiries and two orders as a result. Two days later for \$3,000 he printed the advertisement in five newspapers in as many cities and received 4,000 inquiries. He figured that the radio advertisement cost \$166.66 for each reply; the newspaper advertisement 75 cents a reply.

Testimony like this may lead to challenges and tests. No concern disseminating advertising by radio is likely to contend that it produces such results as are obtainable from the use of the best newspapers, yet to find that newspaper has the better of radio advertising in the ratio of 222 to 1, as Mr. Babson's experiment indicated, is perhaps more than the radio folk will concede without further evidence.

It is plain, of course, that in advertising the printed word has a huge advantage over the spoken. The well-written and neatly typed exposition of some desirable thing is laid before the eye of the prospective customer. If he is interested he has time to study, to ponder and to decide. He need not make notes—as he must do in the case of an advertisement addressing only the ear—of names, addresses and prices. Also the type is free from the sometimes distracting mannerisms of the broadcaster.

It has been the experience of the Sun and of other dailies of high class that their advertising lineage, far from being decreased by radio advertising, has grown steadily since the radio period started. Mr. Babson's experiment offers the obvious explanation. No advertiser getting good results from newspaper advertising deserts it for a medium that produces less business, whether he finds the ratio 222 to 1, or 22 to 1, or even 2 to 1, in favor of the columns of the newspaper. —New York Sun.

#### Crescent Clippings (Too late for last week)

Mrs. Gus Farrington was quite pleasantly surprised by a crowd of neighbors Thursday afternoon, the occasion being her birthday. Ice cream and cake was served. Those present were: Mr. and Mrs. Andrew Dorendorf and grandsons, Floyd and Teddy; Mr. and Mrs. George Lenze, Mr. and Mrs. M. L. Robeson and daughter, Sue; Mr. and Mrs. Jake Berriman and daughters, Mrs. Frank Souders and sons, Marion and Marvin; Mrs. Mike Forest and daughter, Ida; Mrs. Bill Dorendorf and children, Mrs. Wm. Kauder, Alice Cramer, Mrs. George Lockhart and children, Mrs. James Farrington and son, Mrs. C. L. Trail and son, Warren; Mrs. Anna Kimbley and children, Mrs. Elizabeth Keeler, Mrs. Abe Dorendorf and sons and Mrs. John Darby and daughters.

Mr. and Mrs. George Lenze of Rockford, Wash., visited with Andrew Dorendorf family from Tuesday until Saturday. Mrs. Dorendorf and Mrs. Lenze are sisters.

Miss Eva Slatter visited at the Wm. Cowger home over the week-end.

Mr. and Mrs. C. L. Trail visited in Moscow from Friday till Monday. They returned by Lewiston and were accompanied home by Mrs. Clarence Trail and son.

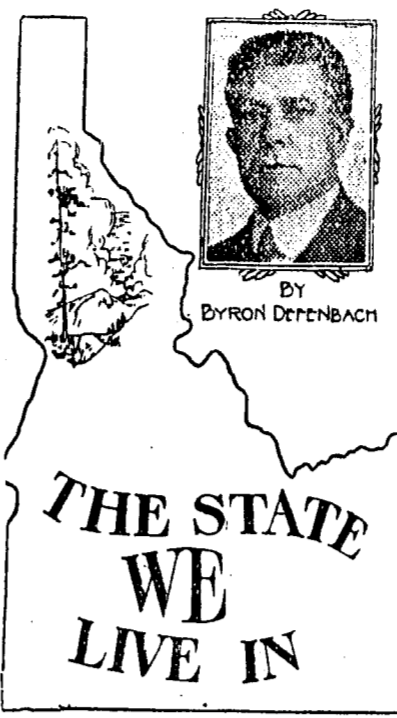

Grandma Wells returned from visiting her son, George Wells, Friday.

Ida Carey returned to her work at Gifford, Wednesday, after a short visit with her parents, Mr. and Mrs. Frank Souders.

Mr. and Mrs. John Darby and daughters and Mr. and Mrs. Wm. Kauder were Lewiston visitors, Friday.

Miss Eva Slatter and Abner Cowger visited at the M. L. Robeson home, Saturday evening.

Alice Cramer visited with

#### The Lapwai Mission

The people of Idaho have not marked or preserved historical buildings, sites or relics to the extent that has been done by other states. There are far more mementoes of Idaho's early history in the museums of Oregon than there are in Idaho. In Montana the trail of Lewis and Clark is marked everywhere.

A canoe reasonably supposed to have been built by Captain Bonneville's men is in use as a feed trough on a Salmon river ranch. An Indian at Lewiston has several iron implements unquestionably used by Lewis and Clark. In the office of attorney Frank Miller at St. Anthony is a rock engraved with an inscription dating back to 1811. It reads, "Al, the cook. Nothing to cook. 1811."

While Franklin is correctly considered the first permanent settlement in Idaho, the mission at Lapwai was established many years earlier. Henry Spaulding and wife arrived at the mouth of Lapwai Creek on the south side of the Clearwater on November 29, 1836, where they lived for some time in a buffalo skin tent. They built a small church which was used for a number of other than religious purposes, and also erected several dwelling houses.

Three years later Spaulding imported the first printing press used on the Pacific Coast. It came from Honolulu to Walla Walla, whence it was brought to Lapwai on horseback. It is an illustration of the statement with which this article begins, that this press is now in the rooms of the Oregon Historical Society at Portland.

The first child of pure white blood to be born in Idaho was Eliza Spaulding, who arrived on November 15, 1837. She died at Cataldo, Idaho, in 1919. Spaulding and his wife are both buried at Lapwai, although there was a period of over twenty years when the mission was abandoned.

But few remains of this pioneer settlement can now be located. In Spaulding's first year he brought in some apple trees from the coast, traces of which can still be identified. The Daughters of American Revolution have put up a substantial monument with bronze tablet beside the highway at Lapwai.

Among Spaulding's first converts were two Indians who, with their descendants, figured prominently in Idaho's early history.

"Timothy" later saved the Steptoe expedition from utter annihilation at the hands of hostile savages. His daughter Jane was the celebrated squaw so intimately connected with the discovery of gold at Pierce.

Joseph was a backslider and was maliciously active at the Whitman Massacre. His son and namesake was the famous "Chief Joseph" of our later history.

Grandma Wells, Saturday afternoon.

Mr. and Mrs. Wm. Kauder and Wm. Zimmerman visited at the Axel Eckman home, Monday.

#### Growth of Human Hair

The average rate of growth of human hair on the head varies from half an inch to one inch a month. The rate of growth is greatest between twelve and thirty years, and diminishes after the age of fifty.

#### Purposeful Man Wins

The man without a purpose is like a ship without a rudder—a waif, a nothing, a no man. Have a purpose in life, and having it, throw such strength of mind and muscle into your work as God has given you.—Carlyle.

**Englishman No Lover**  
A Rumanian woman who wanted to divorce her English husband gave as her reason that "Englishmen did not know how to love." The Bucharest judge agreed with the woman and commented that "as love was primarily essential to a happy marriage the Englishman's innate inability to bestow it justified the complainant's request for a divorce."

**Changes in Feed Must Be Done Quite Slowly**

Chicks should be given the starter for the first two or three weeks but as they grow they can handle a feed with more bulk to it, so mix the starter with a good growing mash, gradually changing the proportions until you are feeding the growing mash straight.

You cannot get a feed too good for young chicks as your egg yield will depend greatly on how your pullets are developed. The highest priced chick feeds on the market will cost you only about twelve cents a chick up to eight weeks of age. Chicks need sunshine, plenty of range, good ventilation, both day and night, lots of green food and clean sanitary quarters.

**Catch Weeds When Young to Improve Vegetables**

Weeds in the vegetable garden can be destroyed with least effort when

they are in the seeding stage, advises the Farm Journal. There is a great loss of ground, seed and labor every year because many gardeners lose interest when the weeds get the best of the vegetables in the garden. Such a condition need never exist if the gardener will use cultivating tools which stir the soil to a shallow depth. When weeds are even slightly disturbed in their early growth just beneath the surface of the soil, they usually die.

**Young Breeding Stock Should Not Be Fattened**

Pigs retained for breeding purposes should not be fed and handled in the same way as those to be sent to market. Young breeding stock should be grown rather than fattened. Strong feet and legs and strong backs are more essential than fat in the development of gilts for brood sows. They should be fed only enough corn to keep them in a good thrifty condition. The rest of their feed should consist of shorts or oats with sufficient tankage or skim milk to balance the ration.

**Considerable Damage Is Done Pastures by Stock**

Considerable damage may be done to pastures by turning the stock on too early in the spring. If the pastures are protected until a cow can get a good mouthful, the forage will be much more vigorous and will stand much closer grazing. A much higher yield of forage will be obtained than where stock is turned in as soon as growth starts. The ground is often very soft in the early spring, and when in this condition, damage may be done from tramping and packing the soil.

**Authentic Information Given in Seed Catalogues**

Vegetable growers, whether home garden or commercial, should consider carefully the source, quality, and variety of seed to be planted. If you have located a good source, endeavor to get seed of identical parentage for use this year. Send for catalogs of several seedsmen, but do not shop around too much. Extravagant, vague statements regarding varieties should be disregarded, but much authentic information may be obtained from reliable seed catalogs.

**Dairymen Gain by Better Ways**

**Increased Butterfat Production Brought About by Right Feeding.**

(Prepared by the United States Department of Agriculture.)

Owners of dairy cows in California have added \$64,297,051 to their income over a period of seven years by raising the average butterfat production per cow for the entire state from 183 pounds in 1920 to 239.2 pounds in 1927, says B. H. Crocherson, director of co-operative extension work in California, in a statement submitted to the United States Department of Agriculture.

**On Way to Goal.**  
At the beginning of the effort in 1920 the California extension service set up as a goal, to be reached in ten years, a state average production of 265 pounds of butterfat per cow. Seven years' concentration on a dairy improvement program, including proper feeding, breeding, and culling, has brought them well on their way to accomplishment of the goal within the time set.

During the seven years the number of cows under test in the regularly organized cow-testing or dairy-herd-improvement associations increased from 80,000 to over 70,000. The work of these associations is the basis for the improvement program. From the testing records is derived the information necessary for proper feeding, breeding, and the detection of unprofitable animals in the herd.

**Other Big Factors.**  
Other factors in bringing up the average in butterfat production have been competitions both in individual production and community records, efficiency studies of individual herds, use of better breeding stock, improvement of health of herds, provision of better facilities for care and management of herds, and the introduction of better management methods and better stock through the dairy work of boys and girls who are members of 4-H clubs. Only the sustained effort of the extension staff and dairy cattle owners on a long-time program, however, Director Crocherson believes, has made it possible to thus move forward the entire production of a state and collectively influence the average of over half a million animals.

**FARM STOCK**

**SHIPPING LOSSES MAKE LARGE ITEM**

**One of Big Faults Is Overloading Cars in Summer.**

Losses sustained by swine producers of the United States in marketing their hogs amount to the astonishing sum of more than three million dollars yearly. This tremendous waste can be charged directly to the carelessness of shippers and the negligence of transportation companies. In the language of the day, "Something ought to be done about it."

"One of the biggest factors in causing these heavy losses is the overloading of cars, especially in hot weather," says E. F. Ferrin of the division of animal husbandry of the University of Minnesota. "This fault is chargeable chiefly to the carrier which compels the shipper to pay freight on a greater weight than can be loaded without risk. Cars in need of repairs cause crippling or damage to hogs in transit. Holes in floors, nails projecting on the inside of cars, cleats on floors, and unsafe doors, are all minor causes of loss which could be remedied by the railroad company. The carriers are further at fault in delivering unclean cars for reloading, although an order of the Interstate Commerce commission expressly provides that cars must be cleaned."

"But the carriers cannot be held for all the loss. The disposition of the shipper to take a chance induces the practice of overloading, improper bedding of cars, and neglect to remedy minor defects in cars delivered to the loading station. In shipments of mixed cars of cattle and hogs, flimsy partitions which break down result in losses. Proper bedding of cars will save much loss. In hot weather sand soaked with water is by far the best material. In very cold weather losses could be prevented by tacking one width of building paper along one side of the car near the floor. This protection is necessary only on the side of the car which will be toward the north as the car is moved to market. Most of our live stock goes to market in an eastward or westward direction.

**Render Assistance to Sow When Farrowing**

At farrowing time the herdsmen should be on hand to render assistance if necessary, but should otherwise not disturb the sow. In large herds it has been found an exceedingly profitable plan to have an experienced man nearby during the night at this time to inspect the sows every three hours. The farmer with only a few sows will find that a few night trips to the hog house at farrowing time will save many a litter, and prove a most profitable investment of his time and energy.

In the case of heavy, clumsy sows, or those which are very restless at farrowing time, it is a good plan to separate the pigs from the dam by placing them in a warm box or half barrel as they are farrowed. Sows properly handled before farrowing will not usually resent such separation. When the sow has become quiet, and as quickly as possible after farrowing is over, the pigs should be, one by one, carefully replaced at a nipple and watched until their safety is assured. If the sow is very cross and irritable, it may be necessary to keep the pigs away from her for a longer time, returning them to nurse every two or three hours. A chilled pig may be revived by immersing it up to the head in water as warm as the hand will bear.

**Live Stock Facts**

Remove the ram from the flock as soon as the breeding season is over.

Ton litter methods grow hogs for market when prices of pork are most profitable.

Hogs should sell on profitable levels all through this year. Judging from the supplies available.

Good hog men put in all the time possible with their herds, and often are able to null what might be future trouble right at the outset.

Buttermilk or skim milk cannot very well be compared to barley because barley is a dry feed containing only about 10 per cent moisture while buttermilk and skim milk contain about 80 per cent of moisture.

Young pigs prefer their barley and oats ground. Usually there is nothing to gain by grinding corn.

Buttermilk that is free from dilution with wash water from the churns is practically equal pound for pound to skim milk for feeding to hogs.

The farmer who keeps 50 brood sows and averages four pigs to the litter can hardly compete with the farmer who keeps 25 sows and averages eight pigs to the litter, 200 pigs being produced in each case.

**Alfalfa Pasture Great Help in Producing Pork**  
Alfalfa pasture will produce more pork per acre on the average than any other forage crop. It is one of the earliest pasture crops to be available in the spring and if kept clipped when necessary during the summer, it will provide good forage until late in the fall. Under average conditions an acre of alfalfa will pasture from 10 to 20 sows, depending on the conditions previously mentioned. It should not be pastured too closely as it does not stand very heavy foraging. It probably would be best to pasture it in such a way as to permit the cutting of two small crops of hay during the season in addition to the pasture furnished. Alfalfa is a crop that is high in protein and mineral matter, both of which are very necessary in animal growth and which are decidedly lacking in corn, the feed that forms the basis for practically all hog rations. For this reason alfalfa is doubly valuable as a forage crop.

**Testing Seed Oats for Germination Is Advised**  
Testing of seed oats for germination is advised by L. F. Rickey, of the University of Illinois, who says that samples of seed oats received at the university have shown a great variation in germination.  
Quite a few oats were "bin-burned" in storage and the heat so generated was sufficient to destroy the life of a large part of the oats. Samples tested at the university tested as low as 9 per cent.  
A quick test of 200 or 300 kernels in soil or moist cloths may be made in the house, an assurance thus secured as to the vitality or lack of vitality of the seed before planting.

**Around the Farm**  
Clip the young pig's wolf teeth.  
Good ensilage is a long step toward economical milk production.  
Be sure you have enough room in your brooder house for your chicks. Overcrowding results in heavy losses.  
Not all plants need a "sweet" soil; some do better in a fairly high degree of acidity. It pays to know your plants.  
Male birds help to spread bacillary white diarrhea among poultry, although the disease does spread without males.  
Cultivate your orchard as soon as the ground is workable to kill the grass and weeds and to free the nitrogen supply which helps early growth.  
No stock tonic will cure abortion. Immunity to the disease develops rapidly in the bodies of infected cows. As a result of this immunity most cows will calve normally the year after an abortion.

**Alfalfa Pasture Great Help in Producing Pork**  
Alfalfa pasture will produce more pork per acre on the average than any other forage crop. It is one of the earliest pasture crops to be available in the spring and if kept clipped when necessary during the summer, it will provide good forage until late in the fall. Under average conditions an acre of alfalfa will pasture from 10 to 20 sows, depending on the conditions previously mentioned. It should not be pastured too closely as it does not stand very heavy foraging. It probably would be best to pasture it in such a way as to permit the cutting of two small crops of hay during the season in addition to the pasture furnished. Alfalfa is a crop that is high in protein and mineral matter, both of which are very necessary in animal growth and which are decidedly lacking in corn, the feed that forms the basis for practically all hog rations. For this reason alfalfa is doubly valuable as a forage crop.

Army Nurses in Graduation Ceremonies

A beautiful scene during the graduation ceremonies held at the Walter Reed hospital, Washington, when the army graduated 42 young women nurses. Miss Malvina M. Grieves, one of the graduates, was presented with the Mrs. Henry R. Rea medal which is given annually to the graduate who shows the greatest natural aptitude for her work.

Husker-Shredder Is Efficient Destroyer

Solves Problem in Corn-Borer Clean-Up Plan.

(Prepared by the United States Department of Agriculture.)

While the husker-shredder has long been recognized as a useful machine in the corn belt, its effectiveness as a destroyer of corn borers in corn fodder has given it a new significance. Shredding solves one of the most difficult problems in a corn-borer clean-up program, according to entomologists of the United States Department of Agriculture, by affording an efficient and practical means of disposing of the cornstalks that might otherwise carry the borers through the winter.

Shredding tests, they say, indicate that kills of from 98 to 100 per cent of the borers may be obtained, and that any that escape death in the machine probably perish during the process of storing or feeding the shredded material. The maximum kill is obtained when stalks are cut in lengths of one-half inch or less.

Other advantages attributed to the husker-shredder are cited by the farm management specialist of the department in Farmers' Bulletin 1589-F, The Husker-Shredder on Eastern Corn Belt Farms, just issued. This bulletin is based largely on information secured in a co-operative study of the experiences of farmers in Ohio, Michigan, Indiana and Illinois who use husker-shredders in harvesting their corn crop.

A copy of the bulletin may be obtained by writing to the United States Department of Agriculture, Washington, D. C.

Bud Grafting on Trees

Really Simple Process

Bud grafting or "budding," as it is often called, is the process of transplanting an eye or bud from one tree or shrub to another, and is really a simple process when once the operator "knows how."

There are a few essential points, however, that are frequently overlooked, and one of the principal ones of these is to have the bark of the stock so that it slides freely. Almost every man or boy from the country can remember in his earlier days the making of a whistle from small wood of the willow and how necessary it was for the bark to peel to make it properly. Now this is just the condition for the bark to be in for successful bud grafting and when the stock to be grafted upon is in this condition success is almost sure to follow. August is the season in many sections for bud-grafting of peaches, cherries, plums and other fruits and also roses and other ornamentals. One of the secrets of budding and grafting is to perform the operation quickly, before the sap of the plant gets a chance to oxidize, and as it is an old adage that "practice makes perfect" the professional grafter or budder nearly always scores more success than the amateur in this line.

Way to Clean Brooder

by Using Heavy Paper

A good way to keep the floor of a brooder clean is to cover the floor with heavy paper. Over this scatter litter or cut straw. When the paper becomes soiled, it is removed, litter and all, and burned or buried. It is much easier to replace both the paper and litter than to scrub the floors when soiled. Then, too, the brooders are always dry, whereas if they must be scrubbed often, they are liable to be damp sometimes, and then look out for roup. Dampness will bring on roup in young chicks, and is sometimes so fatal and does its work of destruction so quickly, that one has no chance to use a remedy, if one can be found. It is much more fatal to young chicks than to matured fowls.

Cultivate Everbearing

Strawberries All Year

Everbearing strawberries need lots of cultivating and hoeing. It is not necessary to keep the weeds out, but the ground should be worked frequently whether there are any weeds or not, as the everbearers do not like to be left standing in a hard soil even if there are no weeds. So keep

the ground stirred so that there is a mulch of loose soil around them at all times if you want them to do their best for you. Everbearing strawberries make a fine addition to the menu on our table in the fall of the year, helping to make that much needed variety and change which some sage has said is "spice of life."

Cutting Forests

Where forests are cut down with no provision for immediate regrowth, the economic effects reach out far beyond the lumber business. Industries move away, wages are reduced, bank deposits decrease, farmers lose their markets, railroad revenues shrink, schools deteriorate, good roads are fewer, tax burdens pile up, and abandoned farms abound.

Control Cutworms

Cutworms are among the most troublesome insects with which the gardener and the farmer have to deal. Their principal damage is done in the spring when they cut off young plants at or near the surface of the ground. Cutworms are not difficult to control. The most effective and the most practical method is to poison them with poisoned bran mash.

Some Distance

A parsec, astronomical measuring term, is equal to 3.26 "light years," or about 20,000,000,000,000 miles.

Broccoli Is Kin to Cauliflower

Excellent Flavored Vegetable Is Good Source of Calcium and Iron.

(Prepared by the United States Department of Agriculture.)

Broccoli is not a newly discovered vegetable, but until lately it was not well known or widely grown. Of European origin, it has long been familiar to the French and Italian household, and it was doubtless introduced to Americans through these nationalities. Recently broccoli of the sprouting type has been produced extensively in Texas and California, and has become very popular. It is now possible to obtain this excellent flavored green vegetable in the stalls of most large city markets.

From Cabbage Family.

Broccoli is one of the forms of the large brassica or cabbage family. Cauliflower, cabbage, brussels sprouts, kale, and kohlrabi are its nearest relatives, botanically speaking. Of these it is most like cauliflower. The flower head of sprouting broccoli unlike that of cauliflower, is not white, but deep green, as is the rest of the part that is cut for food. The stalk is long, leafy, and branching. Because of this long stalk, some people have

thought that sprouting broccoli must be a cross between asparagus and cauliflower, but horticulturists of the United States Department of Agriculture say this is not the case. When a first crop of flower heads has been cut from the plants, a second growth may be obtained.

The flower heads and the more tender parts of the stalk are eaten. The lower end of the stalk is trimmed off, so that sometimes there may be considerable waste in preparing broccoli for the table. Like any other green vegetable, it is cooked in lightly salted boiling water. The pieces are left whole and should be carefully removed from the saucepan to keep them shapeless for serving. Broccoli usually becomes tender in 20 to 25 minutes' cooking. It is then drained and served with melted butter or Hollandaise sauce.

Resembles Cauliflower.

Analyses show that sprouting broccoli is a good source of calcium, phosphorus, and iron in the diet, resembling cauliflower in this respect. About 80 per cent of the edible portion is water, and the other 11 per cent, which is solid matter, differs but slightly in protein, fat, fiber, and ash content from cauliflower. No vitamin studies have so far been made with broccoli, but probably, like other green-leaf vegetables, it is a good source of one or more vitamins.

Spirit That Wins

The job may be ever so big, but that doesn't mean a thing to an up-and-at-'em American. No task is too big for anyone, providing that one has the proper equipment. Remember, "the bigger they are the harder they fall." —Grit.

Agricultural Squibs

Oil will prolong the life of harness many years.

Watch costs and markets and profits will take care of themselves.

Early and late vegetables are usually more profitable than mid-season crops.

According to agricultural college figures, farm buildings should be repainted every three and half years.

Every crop grower and shipper should be certain he knows when and how to harvest and how to grade and pack.

Legume hays are rich in lime and bran, and the oil meals are rich in phosphorus. Feeding them helps to reduce mineral shortage.

There are several species of cutworms under several common names. The damage is similar for all species and their life history is much alike.

There should be enough cattle on a farm to consume the alfalfa, if it has to be baled and shipped the expense and work is too great to pay for the shipping and baling.

Telephoto Valuable

The telephoto system has been found particularly valuable in China, for by its means the complicated Chinese characters can be sent in a telegraphic message.

**Control of Rats  
Up to Community**

**Where Food and Shelter Are  
Lacking Rodents Are  
Chased Away.**

(Prepared by the United States Department of Agriculture.)  
Definite headway in rat control requires not the mere killing off of rats as they are encountered in markets, poultry yards, homes, or wherever they abound, but more especially the removal of those conditions that are responsible for the rats, according to the biological survey of the United States Department of Agriculture.

**Shut Off Food Supply.**

Rats require food and shelter, and where these are lacking they cannot persist. Modern building construction and sanitation, as practiced in our more progressive cities, deprive rats of suitable living and breeding places, and shut off their usual food supply. Rat-proofing clauses in local building ordinances and more strict regulations in local sanitary codes, including the proper collection and disposal of garbage and the prevention of trash and waste accumulations on private premises, will do more to bring about permanent reduction in the number of rats than any other measure.

Rat proofing of new buildings is entirely practicable and should be required in all cases. It would not be practicable, however, to require rat proofing of many of the older buildings. As long as this is true and as long as rats are able to obtain a food supply, it will be necessary to destroy them. But no real progress in rat control is possible when the destruction of these pests is left to the individual, for reinfestation from surrounding infested premises is continuous. Arrangements for thoroughly treating larger areas are essential to successful results.

**Work Together.**

A number of cities working in cooperation with and under the leadership of the biological survey are now carrying on systematic and scientific rat control with excellent results. This bureau will be glad to assist in planning and in some cases in carrying out co-operative rat-control projects. The problem of rat control is one of the community, even of the county, the state, and the nation. It is recognized as an important world problem, for not only do rats destroy millions of dollars' worth of valuable foods and property, but they carry filth-borne disease wherever they go.

**Profitable to Discard**

**Misshapen Potato Seed**

Many potato growers are finding it profitable to throw out the long, slender, or badly misshapen tubers from their seed. These tubers carry the virus of the spindle tuber disease. The yield from them is practically nothing. When buying seed, avoid any lot of seed which carries a large number of these "run-out" potatoes. Remember when buying seed potatoes, you are not buying a bushel of potatoes but rather you are making an investment in a crop. It may be a profitable one or it may be unprofitable. Good seed is worth more money, for it yields a higher return on the investment.

**Good in All Weathers**

There is something good in all weather. If it doesn't happen to be good for my work today it's good for some other man's day and will come around for me tomorrow.—Charles Dickens.

**Success Explained**

"Why Singers Succeed" is an interesting article, every reason being presented except the chance that they can sing.—Boston Evening Transcript

**Big Bear Ridge News**

Miss Bertina Forest returned home from Spokane where she has spent several months.

Mrs. Ida Comstock is enjoying a visit with her sister from California.

Mr. and Mrs. Wallace Emmett and sons, Roy and Homer, were Spokane visitors last week.

Mrs. L. Meyers of Lewiston spent the week end with her daughter, Mrs. Claude Jones.

The Lutheran Ladies Aid met at the home of Mrs. Thorvald Nelson Wednesday afternoon.

Mrs. John Halseth and daughters, Marjorie and Doris of Spokane are visiting her sister, Mrs. Herbert Slocum and other relatives here.

Johnnie Jones underwent a mastoid operation at a Lewiston hospital last week, and is getting along nicely.

Chas. Bower returned home from Spokane last week and we are glad to hear he is improving.

Mr. and Mrs. Ole Lien spent Monday with their daughter, Mrs. Einar Bruseth in Clarkston.

Miss Neva Ware is spending the week with relatives in Clarkston.

Mr. and Mrs. Gust Lucken of Kendrick were visiting friends here Sunday.

Mrs. Leif Field and children have returned to their home at Colton.

Misses Alma and Martha Aas entertained the Luther League at their home last Friday evening. Games were played on the lawn beside the bonfire. A nice lunch was served by Mrs. Aas and daughters.

Mrs. Ed Halseth and twin boys, Harold and Gerald, spent Monday with her sister, Mrs. Pete Halseth near Deary.

The Girls 4-H Club met at the hall Tuesday afternoon.

Mr. and Mrs. Oscar D. Reinemer of Dishman, Wash., were visiting Mrs. Reinemer's parents, Mr. and Mrs. O. V. Morey, and sister, Mrs. Ed Galloway, last week.

Miss Emma Weber, daughter of Mr. and Mrs. Chas. Weber was married to Russel Snyder at Moscow, June 5th by Rev. Clifford M. Drury. They will make their home at Helmer, where the groom is employed by the Potlatch Lumber Co.

Mr. Herbert Slocum has been ill during the past week at her home on upper Bear ridge. She is somewhat improved at this writing.

Those who drove to LaCrosse, Wash., for the church dedication last Sunday were: Ole, Hans, Evan and Henry Lien, Zack Aas and family, Mr. and Mrs. Ed Lien and daughter, Miss Margaret (Mr. and Mrs. Halvor Lien, Mr. and Mrs. Thorvald Nelson and Osear Slind.

You are cordially invited to attend the ice cream social and supper given by the Lutheran Ladies Aid at the Community hall, Saturday evening, June 29. Candy will be sold. Come and bring your friends.

Luther League will be held in the Lutheran church, Sunday evening at 7:30. Everyone welcome.

**Crescent Clippings**

The John Darby family were dinner guests at the Wm. Kauder home Sunday.

Ernest Loeser returned home Thursday from Weippe, Idaho, near where he has been working in the sheep camp.

Grandma Keeler and the Chas. Keeler family were Sunday visitors at the Gus Farrington home, Sunday.

Walter Dorendorf visited his sister, Mrs. Wm. Riley of Texas ridge, Sunday.

Mr. and Mrs. Mike Forest and daughters, and Mrs. Anna Kimbley and children were Sunday dinner guests at the Bill Dorendorf home.

Bertha and Mary Loeser visited with their aunt, Mrs. Elmer Hudson, Saturday and Sunday, and with the Wm. Kauder family, Monday night.

Mr. and Mrs. Wm. Kauder and Mr. and Mrs. John Darby and daughters spent Sunday afternoon at the Edw. Darby home at Linden.

Mr. and Mrs. Nels Longeteig and family and Mr. and Mrs. Albert Mabry visited with Tony Shumaker at the Gus Farrington home, Sunday afternoon.

**Idaho Special 4-Row Bean Cultivator**

Built by W. F. Behrens

Mr. Farmer, did you ever stop to think what a saving in hoeing expense can be made? These cultivators, pushed by a Cletrac, will cultivate nearly as much as 10 men can do in one day with horses and think the many weary miles of walking it will save you. That is not all. All those who own one of these cultivators will enjoy the pleasure of cutting four rows of beans at a time with this same cultivator by simply taking off the teeth and fastening cutter blades in place on the same frame.

**Two Machines in One**

We are now at work building these cutters. Within a short time one complete 4-Row Bean Cutter will be on display. Come and see it— We will sell these machines at a very reasonable price.

All you owe me is a visit. Bring your car, your tractor, sewing machine, alarm clock—We fix 'em. If we can't, it costs you nothing.

**We Have on Hand**

One used 30 Cletrac, one 12-20 Cletrac, one 12-20 Twin City, one Fordson, one Holt 20, one Cletrac 20—real buys.

**Kendrick Machinery Company**

"Hit-and-miss" cultivation is little better than no cultivation at all. Be ready to get all the weeds this year with a

**John Deere KC Cultivator**

The KC works all the soil and cuts out the weeds. Its beams are always parallel, even when dodging on crooked rows—its sweepers shovels always point straight ahead and cut out full width and are held level—cut at same depth under all conditions. The ground is left level and weed-free.

Drop in and see the KC next time you are in town.
