## DAIRY TALK DAIRY

HERD RECORDS OF  
MUCH IMPORTANCE

Improvement Associations'  
Growth Aid to Farmers.

(Prepared by the United States Department of Agriculture.)  
Dairy farmers in the United States apparently are taking increasing interest in the bookkeeping end of their business, if the growth of the dairy-herd-improvement association movement is a fair indication.

There are now 1,090 such associations in this country, according to Dr. J. C. McDowell, of the bureau of dairy industry, United States Department of Agriculture, an increase of nearly 50 per cent in the last four years. He predicts a continued growth of the movement and cites its past history to support his view.

The idea of keeping production and cost records on the dairy herd started with one cow-testing association in 1906, Doctor McDowell recalls. By the end of 1924 there were 732 dairy-herd-improvement associations, as they are now called. During the next four years the annual growth of the movement was even greater. In 1925 there was a gain of 45 associations, or 6 per cent over the previous year; in 1926 there was a gain of 60, or 8 per cent; in 1927 a gain of 110, or 18 per cent; and in 1928 a gain of 148 associations, or 15 per cent.

Thus there were 1,090 associations on January 1, 1929, in which the members were keeping books on 405,804 cows. This represents a remarkable growth in the use of business methods on the dairy farm, says Doctor McDowell, but there are still about 21,000,000 cows being kept for milk in the United States whose owners might also profit by entering them in a dairy-herd-improvement association.

### STARTING EARLY

This is Tracy B., sixteen-month-old son of Mrs. Fanny Dunway, of St. Louis, Mo., who is an addict, at his tender age, to Lady Nicotine. He is fond of cigars but prefers his pipe. Tracy has several brothers and sisters who are immensely proud of his attainment. The Dunway family recently moved up to St. Louis from the hills of Kentucky.

### Bull Frog a Game Fish

In Idaho the lowly bullfrog has the legal status of a game fish, having an open and closed season and other legal protection such as is accorded the vivacity of the finny tribe. It is reported that in Idaho the bullfrog is seriously regarded as desirable game. It is hunted with small caliber rifles or by rod and line. It is angled for with hook and line, a piece of red flannel is used as bait. The bullfrog is taken not merely for sport but because it is a very desirable article of food, as a good sized mature bullfrog weighs over a pound and provides delicate meat equivalent to that furnished by an eight-inch trout.

In Longview, Wash., a man's car collided with another driven by his wife. Of course, you know whose fault that was.

### SOUTHWICK ITEMS

Mrs. J. T. Smith and T.B. Smith of Caldwell, mother and brother of Mrs. Wm. Couger, came in Wednesday for a visit. They left Caldwell at 4:30 and arrived about 7:30 Wednesday evening, having traveled 352 miles.

John Lettenmaier and family went to Lewiston Friday for a visit with Mrs. Lettenmaier's sister.

Cecil Hayward of Elk River spent Sunday with his parents. Fred Hassinger and family of Gifford spent Sunday with his mother, Mrs. Wm. Berriman.

Murry Benjamin and wife of Palouse are visiting with relatives here for a while.

Clarence Henderson, wife and daughter of Potlatch are spending a few days with his parents and other relatives.

Mr. and Mrs. Delbert Hayward moved Saturday to Tacoma, where he has employment.

Mr. and Mrs. Nels Longteig and son drove to Grangeville Friday, where they spent the week end with their daughter, Mrs. Bales. They returned home Monday evening.

Mr. Whitman threshed beans for Jos. Tschantz Tuesday.

Sunday guests at the home of Elton McCoy, were Wm. Henderson, wife and daughter Nellie, and Clarence Henderson and wife.

Milton Benjamin and wife drove to Palouse Saturday returning home Sunday evening.

Clinton and Earl Wright and son Virgil were the over night guests of their sister, Mrs. Geo. Christensen Saturday night.

Walter Hanks and wife of Lenore were the over night guests of her parents Monday night.

A farewell supper was held, at the Ladies' Aid Hall Monday evening in honor of the Mustoe Bros. and their wives, who left for Kellogg Tuesday morning, where they expect to make their home for some time.

Miss Binford left Monday for a visit with her parents. She expects to be gone several weeks.

A number of pupils of the school attended the fair at Culesac last Friday. We are glad to say that Southwick won first prize in the exhibit.

Mrs. Harry Smith and baby spent the day Wednesday with Mrs. Smith's parents.

Roy Douglas and Burton Sanders left Tuesday for Camas, Washington.

Mrs. Ray Triplett of Lewiston is staying at the home of her sister-in-law, Mrs. Elmer McCoy for a few weeks.

The ladies' of the Community Club met at the home of Mrs. Gordon Harris Tuesday for an all day meeting.

An Airplane landed here Friday afternoon, when it took on passengers. Several of the people around here took their first airplane ride.

Russel Baker returned home Monday evening from an elk hunt up the Oro Grande. One of the party he was with had the good luck to kill an elk.

Chas. Smith of Teakean has moved his family to town so the children could attend school.

Mr. and Mrs. Travis and son Herman left Tuesday morning for Wenatchee. They expect to be gone for about six weeks.

Grandma Bunker who has been visiting here for some time left Tuesday for her home in Kellogg.

### Keep Milker Clean and Free of All Bacteria

The most effective method of keeping a milking machine clean and free from bacteria is to stop the development of bacteria on the parts of the machine over which the fluid milk passes, according to E. G. Hastings, University of Wisconsin.

Bleaching powder is the most common germicide. It is harmless to the machine and also to the milk. By mixing 12 ounces of the powder with a gallon of water, a stock solution is obtained which is very effective in destroying bacteria.

Good results are obtained by filling the tubes with the solution then plugging the openings with a cork and letting the solution remain there until milking time, when it can be drained and the parts used without further treatment. After the milking is over, a pail of cold water should be run through the machine. This should be followed with a pail of warm water containing a tablespoonful of washing soda. After this the parts should be placed in a rack and filled with a fresh supply of the solution.

### FEDERAL TAX ON BUTTER SUBSTITUTES

In a decision rendered recently by the United States Court for the Western District of Missouri, it was held that the law imposing a federal tax upon oleomargarine applies also to dealers in a large number of so-called colored cooking or shortening compounds. The decision was based upon the similarity of these substances to butter, and their widespread sale as butter substitutes. As a result of this decision wholesale dealers in this class of cooking or shortening compounds on and after October 1, 1929, will be required to pay an annual tax of \$480.00, and retail dealers will be subjected to a tax of \$48.00 a year. The tax is payable to Collectors of Internal Revenue.

Among the many brands of these artificially colored cooking or shortening compounds are "Nut-ite" (formerly called "Nu-ine" and "Nikine"), "New Nut," "Nutlet," "Penobscot," "Danish Nut Product," "Mayflower," "Xtrafine," "Ideal," "Flavonut," "Favorit Nut," "Ever Ready," "Richnut," "Nublend," "Sunflower," "Golden Rod," "Pallas," "De Luxe," "Table Nut," "Dixie," "Magie," "Southern Nut Product," "Sonny Boy," and "Rumford."

The dairy and livestock industries of the country will watch with much interest the effect of this tax upon the manufacture and sale of a large number of substitutes now on the market which enter into direct competition with butter, lard and other similar farm products.

Penn State freshmen have organized a harmonica band, 12,000 strong, to play during football games. Football teams have survived cheer leaders, however, and there's just a chance that they'll be able to overcome this, too.

The Iowa lady who has seen more than 5,000 movies ought to be pretty well acquainted with the plot by now.

NOTHING BETTER THAN THIS

### Poultry Notes

- Keep house and yard clean.
- Build a good house or shelter.
- Provide roosts and dropping boards.
- Grow some green crop in the yard.
- Keep the hens confined to your own land and off the road.
- Don't keep a male bird. Hens lay just as well without a male.

Kamala is a good remedy for tape worms in poultry and nicotine sulphate a good remedy for other intestinal worms.

Unless eggs are produced by healthy hens under sanitary conditions, the chicks produced will be liable to the diseases of the present flock.

If you cannot get your cockerels on the market early enough to get the top broiler prices for them, emphasize some of them and see what they will bring you next spring as capons.

Bright green alfalfa is a very valuable addition to the mature ducks' ration and they will relish a little of it.

Keep the hens confined to the houses when the yards are muddy; this helps to keep the hens' feet clean. Gather eggs often.

What is a fresh egg? Strictly speaking, an egg is considered fresh until it has been in storage at a temperature of 300 degrees F. at least 30 days. However, the best prices are paid for the newly laid eggs.

### RESOLUTION

Moscow, Idaho, Tuesday, October 15, 1929.

WHEREAS, it appears that an emergency has arisen which could not reasonably have been foreseen, that it will require \$200.00 for repair and \$600.00 for expenses for the County Farm.

RESOLVED, that a public hearing upon said application be held on the 25th day of October, 1929, at 10:00 o'clock A. M. at the courthouse at Moscow, Idaho, and that due notice of said hearing be published as required by law.

BY ORDER OF THE BOARD,  
JOHN L. WOODY, Chairman

### NOTICE

NOTICE IS HEREBY GIVEN, that a public hearing will be held on the 25th day of October, 1929 at 10:00 o'clock A. M. at the courthouse at Moscow, Idaho, for the purpose of considering the granting of an emergency expenditure in the sum of \$200.00 for Repair and \$600.00 for expenses for the County Farm, at which time and place any tax payer may appear and be heard for and against the expenditure of such sums and for such alleged emergency.

Dated this 15th day of October, A. D. 1929.

HARRY A. THATCHER, Clerk of the Board of County Commissioners.

**Goodyear Blimp Lands on the Sea**

Equipped with pontoons, the Goodyear blimp Volunteer made a series of successful sea landings in the vicinity of Los Angeles harbor. Lieut. Karl Lange, pilot, said he experienced no particular difficulty. This was said to be the second time in the history of aviation that such a feat has been accomplished. About ten years ago a similar landing was made by a Goodyear ship.

**FARM STOCK**

IN MAKING AND FEEDING SILAGE

Best and Cheapest Form in Which to Store Feed.

Prepared by the United States Department of Agriculture.

Some important points to observe in the making and feeding of silage are discussed by live stock specialists of the United States Department of Agriculture in a revised edition of Farmers' Bulletin No. 578-F, "The Making and Feeding of Silage," which is now ready for distribution to interested persons.

"Silage," the authors of the bulletin say, "is the best and cheapest form in which to store succulent feed. Many forage crops can be made into silage; but corn, where it can be grown successfully, makes the best silage."

"Silage is suited for feeding to all live stock. Dairy cows, not on good pasture, need it perhaps more than other classes of animals, because the succulence it supplies is helpful in the production of large quantities of milk. It is a cheap and economical feed for beef cattle, from breeding cow to fattening steer. Sheep like it and it is well suited to their needs. Even horses and mules may be fed limited quantities of good silage with good results."

A method of making silage, known as the Ronning method, has come into use in the last few years and is considered the easiest known method of making silage. The standing corn is harvested and cut into proper lengths for the silo by a machine drawn and operated by a tractor. The cut corn is delivered to a wagon box drawn alongside. It is then hauled to the silo and pushed off into a blower which elevates it into the silo. When a pit silo is used the work of filling is still less. Making silage by the Ronning method requires approximately the same size crew as when a harvester and bundle elevator is used, but the advantage lies in saving the labor of handling the heavy bundles.

A copy of the bulletin may be obtained by writing to the United States Department of Agriculture, Washington, D. C.

Recent stock market reverses lead to the suggestion that perhaps it ought to be renamed Wailing Wall street.

**Feeding Breeding Pig for Efficient Growth**

Pigs retained for breeding purposes should not be fed and handled in the same way as those to be sent to market. Young breeding stock should be grown rather than fattened. Strong feet and legs and strong backs are more essential than fat in the development of gilts for brood sows. They should be fed only enough corn to keep them in a good thrifty condition. The rest of their feed should consist of shorts or oats with sufficient tankage or skim milk to balance the ration.

**Figuring Horse Feeds at Cost of Production**

Many farmers by figuring their horse feeds at cost of production find that they can keep a horse per year in very satisfactory manner at a feed cost of \$50 to \$60. To cover all costs of keeping a horse for a year including care, shelter and veterinary service, you would be entirely fair to the tractor side of the argument and reasonably fair to the horse by allowing a set charge of \$100 per year as the total cost under farm conditions of keeping a good work horse.

**Live Stock Facts**

It pays to summer fallow land before sowing it to alfalfa.

Sixty per cent of all pigs are born in March, April and May.

The use of self-feeders is the most satisfactory system of growing hogs.

A good pure-bred ram should never be considered an expense but as an excellent investment that will bring a high percentage of profit when properly handled.

An acre of good forage usually can be depended upon to carry from 1,000 to 2,000 pounds of hogs.

Hog cholera first appeared in the United States in Ohio in 1833. In a single year the losses of hogs by cholera have amounted to \$65,000,000.

Pure-bred rams will pay, through increased profits on market lambs, their original purchase price in one year, provided there are as many as 30 or 40 ewes in the flock in which they are used.

An Austrian woman played the violin continuously for twenty-four hours recently. What a wonderful rest for the chin!

**Cattle Grub Expensive to Many Cattle Owners**

It costs in the neighborhood of \$50,000,000 a year for cattle owners, dairymen, feeders, butchers, and tanners to support the cattle grub, yet this pest can be destroyed. Either the old method of hand extraction may be used, or the newer methods developed by the United States Department of Agriculture. The department advises the application of Derris as a wash, ointment, or powder, pyrethrum ointment, fine tobacco powder or nicotine dust, or the injection of benzol or carbon tetrachloride. A concentrated drive on the cattle grub is necessary to eradicate it from a locality. The pest is becoming more serious, says the department, owing to the spread of a second species of grub, known as the northern, or European grub.

**Staking and Pruning Is Essential for Tomatoes**

Staking and pruning truck crop tomatoes is a common practice. Advantages claimed for staking and pruning are greater uniformity and better average size.

Stakes are commonly set when the plants are from 12 to 15 inches tall and should stand three to four feet above the ground. Plants should be tied to the stakes with soft twine or rags loosely and as the plant develops additional ties should be made.

The amount of pruning varies with the desire of the grower. Many believe that heavy pruning reduces yields needlessly and experiments tend to bear this out.

If you didn't send your children through college, you wouldn't have anybody around to correct your grammar.

**Markets Discriminate Against Heifer Calves**

The market seems to discriminate against heifer calves and apparently quotes higher prices for steer calves of equal finish and quality. Very often such difference in market price results from the fact that the heifer calves have been on full feed too long. If they had been marketed 30 or 60 days sooner, they would have returned a greater profit. Heifer calves, which are full fed on grain as long as steer calves, will carry more surface fat as well as more internal fat. Their carcasses are not so desirable.

**Gluten Feed Value**

Recent experiments at the Kansas station indicate that gluten feed has a value per pound, in the steer ration, slightly greater than cottonseed meal. Linseed meal proved to be worth \$12 to \$15 a ton more than either cottonseed meal or gluten feed. However, linseed meal usually sells considerably higher than gluten feed, and so it would seem that more farmers should be feeding gluten feed than actually are to secure the greatest returns from their steers.

With proper care, bulls may give satisfactory service until fourteen or sixteen years old.

Alfalfa hay is the best to produce milk. Good clover hay comes next while timothy hay is of much less value.

Many dairymen, in seeking to increase the milk production of their cows, have acquired the habit of feeding too much concentrated grain feed, without the necessary balancing roughage.

**DID YOU KNOW?**

That eggs intended for market should not be washed because washing removes the thin gelatin like protective covering and this makes the eggs more susceptible to bacterial and mold infection?

That "teaspoonfuls" not plural of teaspoonful?

That Billy Sunday was a professional ball player before he became an evangelist?

That General Pedding's wife and his three daughters lost their lives when the Presidio Hotel at San Francisco burned in 1915?

That the early Indians, particularly on the Pacific Coast, caught and dried grasshoppers, pounded them into meal, mixed them with vegetable products and served as food?

That David Livingstone ate locusts with the natives of Africa and pronounced them superior to shrimp?

That pyorrhea was rampant among the Indians in the New World as long ago as 1500 B. C.?

That the deepest oil producing well in the United States is in the Signal Hill oil field in Southern California and is 7,600 feet deep?

That when Thomas Edison was five or six years old he started a serious fire in a barn and as punishment he was whip-

ped by the constable in the public square?

That the city of San Antonio in 1910 restored the Alamo and today it is used as a museum?

That Napoleon was only twenty-six when he ended the French Revolution?

That there are 140,000,000,000 brain cells in the pound and a half of gray matter in our skulls?

**UNIVERSITY OF IDAHO.**

Moscow, Oct.—Fall is the best time for the application of gypsum to alfalfa and clover fields of northern Idaho, advises G. R. McDole, soil technologist with the University of Idaho agricultural experiment station. The land plaster may be scattered on the ground any time before the snow flies.

Soils in northern Idaho, chiefly north of the Salmon river, need more sulphur in growing clover and alfalfa and application of gypsum supplies this need very economically.

Northern Idaho farmers who have followed the recommendations of the Idaho experiment station and applied gypsum every third year to their alfalfa stands at the rate of 200 pounds per acre have increased their hay production an average of one ton per acre per year, reports Mr. McDole.

**AUCTION SALE**

I, the undersigned, will sell at Public Auction on the Ed Ameling estate 2 1/2 miles east of Cameron and 2 1/2 miles west of Southwick on the cross-road, following described property:

**Wednesday, October 23**  
**Sale Starts at 10 O'clock Sharp**

**MACHINERY**

- One Deering Binder
- One McCormick Binder
- One 10-ft. Van Brut grain drill
- One 8-ft. disc
- One 16ft. John Deere drag harrow
- One 8ft. Acme Harrow
- One 14" P & O gang plow
- One 14" walking plow
- One 12in. gang plow
- One 8ft spring tooth harrow
- One McCormick Deering 2-horse cut.
- One side delivery
- One Parker Bean cutter
- One hack One top buggy
- One Set hobsleds One Californi rack
- One wagon and bundle rack
- One fanning mill Three Log chains
- About 30ft. of cable
- Singletrees and double trees
- One set heavy breeching harness
- One set yankee breeching harness
- One set ploy harness. One saddle

**HOUSEHOLD GOODS**

- Two dressers One library table
- Two dining tables One cupboard
- Three bedsteads and springs
- Three rocking chairs Nine dining chairs Highchair One kitchen table
- One Hollow wire light system
- telephone One Primrose cream separator linoleum
- One heater and stove pipe
- Two cream cans One oil stove
- Crocks, dishes, washing machine and other things to numerous to mention

**COWS AND HOGS**

- One roan cow 6 years giving milk now be fresh in February
- One roan heifer giving milk, be fresh in December.
- One Guernsey heifer fresh now
- One Gurnren heifer fresh now
- One coming 2 heifer bred in August
- One young calf
- One brood sow to furrow soon

**MISCELLANEOUS**

- Eight pitchforks, One scoop shovel
- Three shovels
- Some grain hay, some bean straw
- about 12 sacks of sweet corn, about one ton of pumpkins and squashes
- some potatoes
- About 50 panels of hog fencing
- About 7 cords of 16" wood
- Twelve chickens One 50 gal. barrel

**MULES AND HORSES**

- One mule, 10 wt. 1100
- One mule, 13 wt. 1250
- One mule, 4 Wt. 1150
- One bay horse, 9 wt. 1200
- One dark bay horse, 9 wt. 1300
- One black horse, 12 wt. 1250
- BLACKSMITH OUTFIT**
- One 400 blower, One 150lb anvil One vice, set of dyes hammers, tongues and other tools
