Low Temperature Right for Fruit

Important Factor in Best Storage of Many Different Products.

(Prepared by the United States Department of Agriculture.)

Temperature plays a most important part in the storage of many fruits that are shipped to market from distant areas of production. Most fruits keep well only within a rather limited range of temperature. With meats and dairy products the important thing is to keep them cold enough, but many fruits are injured seriously by a temperature only a few degrees lower than the most favorable temperature for storage.

Life Processes.
"The life processes of fruits and vegetables," says Dr. Lou A. Hawkins, of the United States Department of Agriculture, in explaining this fact, "are chemical or physical in nature and are governed by chemical and physical laws. According to Van Hof's law, the rate of a chemical reaction is doubled or trebled for each 18 degrees F. rise in temperature. The rate at which the life processes of fruits and vegetables proceed in storage increases as temperature rises."

Experience With Pears.
Doctor Hawkins illustrates the point by giving experience with Bartlett pears. "As a rule," he says, "this fruit will keep twice as long at 31 degrees as at 36 degrees twice as long at 36 degrees as at 43 degrees, and twice as long at this temperature as at 53 degrees. In other words, it will keep about eight times as long at 31 degrees as at 53 degrees. At 65 degrees, however, the fruit keeps about as long as at 53 degrees."

Secret of Making Good Silage Is to Exclude Air

The secret of making good silage is to have all the air excluded. For this reason the silage must not be too dry, and one or two men in the silo should be kept busy distributing and tramping. When filling, the material around the wall should be kept higher than the rest and thoroughly tramped. Otherwise molding around the edge is apt to result.

The preservation of silage is due to three factors—pressure, heat and acid. The pressure excludes the air. The heat, due to fermentation pasteurizes the silage, killing many of the spoiling molds. The acid is also detrimental to many of the spoiling molds.

Kill Mediterranean Fly by Cooling All Fruit

The Department of Agriculture now plans to fight the Mediterranean fruit fly by cooling fruit to a temperature of 28 degrees for five hours followed by holding it for about five days at a temperature of 30 degrees. Another treatment is to hold the fruit at 110 degrees for eight hours. Both the high and low temperatures are fatal to the eggs or larvae of the fly. It is also feasible to attain either the maximum or minimum temperatures in the existing practices of handling citrus fruits.

Cream for Churning

The best way to hold cream on the farm where ice is not available is to keep it in a water tank in a building near the well. A good way is to have a small water tank to keep the cream and then to pump the water for the stock tank through this tank. This will change the water in the cream tank often and keep it cooler. The best temperature to hold cream is between 50 and 60 degrees Fahrenheit. When it is churned it should have about one-half of 1 per cent acid.

Agricultural Hints

The earlier the plowing for wheat, the better the crop.

A shelter belt enhances the value of the entire farm property.

Proper cleaning and repairing of harness may double or treble the period of its usefulness.

For next year's clover to be seeded in wheat on sour soils, apply lime soon after the land is plowed.

It pays to grade and standardize farm products. They sell for a better price and are more in demand.

Eradication of abortion from a herd presents a difficult problem, but can be accomplished by means of the blood tests.

Trees where poultry roosts soon become infested with mites, which can't be eradicated as easily as from a shelter.

Calves which are being fattened during the winter must be well fed to be ready for market next spring or early summer.

Three points of a good silo are: strong walls, smooth inside, and tightness enough to keep the juice in and the air out.

In handling the farm gardens it is probably just as well to burn all the crop residues, rather than to turn them under.

Before Springtime Arrives Here is Your Opportunity to Own

A Complete Electric Laundry

Thos. Agitator Electric Washer Rotary Electric Ironer

BEGINNING MONDAY FEBRUARY 24th

To all the home folks of the Inland Empire who look to us for modern electrical conveniences, we now present an opportunity. It comes just before springtime—and offers you a solution to all your home laundering problems.

In one modern combination here is a fast speedy electric washer and an electric ironer that allows you to sit down and iron. The price is temporarily lowered—and the buying terms reduced to \$1.00 down and small payments with your monthly light bill.

Agitator Washer
Washes thoroughly
Washes speedily
Beautiful enamelled tub
Hot water stays hot

Rotary Ironer
Easily operated
Irons quickly
Saves hours of time
You sit down to iron

HOW THE LASH IS APPLIED IN BRITISH COLUMBIA

A released convict in British Columbia, living near Vancouver, has confided his whipping post experiences to a reporter. The lash, he said, "just knocks the evil out of you." His account shows that authorities take humane precautions not to inflict permanent injury. The convict under sentence is given an examination by the prison doctor that morning, and another just before laying on of the lash. He is blindfolded for the ordeal.

"The heavy pads of leather were strapped over my neck and over my kidneys. There was a deadly pause for a minute, and I could hear my own heart thumping. I thought I was going to faint. When the first one hit me I felt a jar, but little pain possible. It felt as if I had been better. I felt the most agonizing pain possible. It felt as if I had been cut in two. The doctor felt the pulse in my temple and made some sign to the guard. Then another one fell, right in the tracks of the first one. I heard the swish and the whine of the next one, but I never felt it, because my lights went out and I just went limp in the shackle. I came to, and they went at it again. I took ten of them, brother. When they carried me out of there I wished I was dead, and when they dumped me into the hospital bed I yelled and roared with pain. Next morning my back felt like a piece of raw meat, but that was not what hurt the most. What really hurt was the shame and humiliation of having been beaten up like a little kid."

A lashed prisoner, according to this convict, is ostracized. The other convicts avoid him. "I can't say," he told the reporter, "that I am what you would call reformed. I was always a tough youngster and I was brought up in a tough school, and I suppose at heart I am tough still. But I would not go back and take that dose again for anything on earth."—Spokesman-Review.

A little of that medicine might be a good thing to introduce to the thugs and racketeers of Chicago—and other places where their ilk are to be dealt with.

Easily Settled

Traffic Officer Patrick McGoorty—say, wot's the big idea? Wat's your name?

Motorist Israel Feingold—Patrick O'Flaherty.

Bridge Rules

1. Pick up your cards as dealt. You will be ready to bid ahead of the others.
2. If your hand is rotten, mention it. It will guide your partner in his bid and play.
3. If your partner bids first, don't hesitate to raise. He has to play it.
4. Never hurry. Try several cards on a trick until you are sure which one you prefer.
5. Occasionally ask what is trump. It will show you are interested in the game.
6. Talk about other subjects during the game. It makes for good fellowship.
7. Feel free to criticize your partner. He or she will do much better as a result.
8. Always trump your partner's tricks. Never take a chance.
9. Don't try to remember the rules. It is too confusing.
10. If it is a money game, always stop when you are ahead. It will leave a lasting impression and folks will remember you.
11. Always explain your plays, particularly when set. It shows your card knowledge.
12. Disagree with established rules and conventions. People will know you are a person of independent mind.
13. Eat chocolate caramels or other adhesive candy while playing. It keeps the cards from skidding.—Exchange.

Longview Bridge Soon Be Done

The cantilever span of the Longview bridge, joining Longview, Wash., and Rainier, Oregon, over the Columbia river, was connected February 13 when a 32-foot steel girder was swung into place on the lower cord of the downriver side. Less than 100 tons of steel remain to be erected to complete the span.

J. H. Pomeroy, head of the firm which is completing the bridge, was the first man to cross over the treacherous walk, 196 feet above the water.

The Longview bridge, when completed will be the longest cantilever span in the United States and one of the longest in the world. The cantilever span is 1200 feet long, while the total length of the structure is about 3900 feet.

The bridge, when completed, will have cost about \$5,800,000.

COUNTY COMMISSIONERS' PROCEEDINGS

Moscow, Idaho, Monday, Feb. 10, 1930. The Board met this day pursuant to adjournment, present as before. The annual financial report of Potlatch Highway district for the year 1929 was examined and approved.

Township 39 North, Range 5, W. B. M., was examined and ordered placed in the Commissioners' files. The indigency affidavit of Halvor Erickson and application for admittance to the county home, was examined and approved and aid extended as petitioned.

JOINT STATEMENT OF COUNTY AUDITOR AND COUNTY TREASURER FROM APRIL 29th, 1929, TO JANUARY 11th, 1930

Table with columns for Fund, On Hand First of Quarter, Rec'd, Journal Credit, Dis-bursed, Journal Debit, and On Hand End of Quarter. Lists various funds like Current Expense, Sheriff, Assessor, etc.

Table with columns for Fund, On Hand First of Quarter, Rec'd, Journal Credit, Dis-bursed, Journal Debit, and On Hand End of Quarter. Lists various funds like Poor Outside County Home, Sheriff's revolving fund, etc.

I, HARRY A. THATCHER, County Auditor of Latah County, State of Idaho, do hereby certify that the above and foregoing is a full, true and correct report for the quarter ending January 11, 1930, to the best of my knowledge and belief.

REPORT OF OPERATIONS IN FUNDS

Table with columns for Fund, On Hand First of Quarter, Rec'd, Journal Credit, Dis-bursed, Journal Debit, and On Hand End of Quarter. Lists various funds like Current expense, County Road, etc.

Thereby certify that the above statement is true and correct. LEOLA R. KING, County Treasurer. Subscribed and sworn to before me this 21st day of January, 1930.

The Governor Is Right To deter people from committing crimes, certainty of suitable punishment is more effective...

Meat Scraps and Meat Supply Best Minerals The most common and best source of minerals in the feeds for poultry is in the form of meat scraps and milk.

Handling Broomcorn Many broomcorn growers believe that the brush will increase in weight if left until the seed are ripe.

Farm Foreclosures Lower For the year ended March 15, 1929, the number of foreclosures on farms was lowest since 1925, according to the Department of Agriculture's Bureau of Agricultural Economics.

Was Expensive Light Records of a reception given to George Washington in 1790 show that 2000 candles illuminated the hall, at a cost of about \$10 an hour.

KEEP LIVE STOCK MORE COMFORTABLE

December Is Good Time to Eradicate Botflies.

Holiday cheer for farm live stock is one of the recommendations particularly emphasized in the December page of "A Calendar of Live Stock Parasites," issued by the United States Department of Agriculture. The author, Dr. Maurice C. Hall, says, "Strive to keep live stock comfortable, thereby favoring more profitable production."

Cull Herds Closely If Feed Supply Is Low

Farmers who are facing shortages of hay or other feeds for the coming winter should cull their flocks and herds closely, says W. L. Calvert, extension specialist in farm management, University farm, St. Paul, Minn.

Sterility of Cattle Is Most Troublesome

A most troublesome breeding disease of cattle is sterility. This is often a sequel of infectious abortion. The exact causes are not always known.

Satisfactory Results From Hog Self-Feeder

The Iowa experiment station reports excellent results from the use of the self-feeder, not only for producing market hogs, but also for raising breeding gilts and for feeding nursing sows with their litters.

Scabby Sheep

Any condition which causes the sheep to bite and scratch should be investigated at once and the cause definitely learned. Scab on parts of the sheep's body may be overlooked.

Waiting at the Curb

By ELEANOR WILMOT (Copyright.)

SADIE HANLEY answered the question promptly but briefly. The girl admitted that she had only done housework in her parents' home, but that circumstances now compelled her to undertake some remunerative task, and she had chosen this one.

Proper Care of Alfalfa Stand
Is Richest Hay When Cut Early and Produces More Gain in Stock.

(By L. E. WILLOUGHBY, Extension Crops Specialist, Kansas State Agricultural College.)
 After a stand of alfalfa is obtained, the length of time it will live depends on how it is handled. Frequent early cuttings before the bloom stage will so weaken alfalfa that weeds and grass will come into the stand in one or two years.
 At Manhattan on a two-year-old stand that was cut on an average of five times a year, with an average of 31 days between cuttings, weeds and grass came in after one year. This was cut in the bud stage. A stand that was cut in the tenth bloom stage kept the grass and weeds out for four years. When cut in the full bloom stage weeds and grass did not bother over a period of eight years. Where it is desired to maintain a strong stand of alfalfa, it seems advisable to cut alfalfa between the tenth and the full bloom stage. Where the highest quality of hay is desired, the earlier cuttings may be practiced at the expense of maintaining the stand.
 Early cut alfalfa is the richest hay and produces more gain when fed to live stock than does late cut hay. An occasional early cutting probably will not injure the vigor of an alfalfa stand. If, for any reason, it is desirable to cut one crop early, the following crops should be allowed to approach full bloom.
 Another common abuse to an alfalfa stand is to cut late in the fall. Sometimes after the third or fourth cutting a six or eight inch growth is formed. Such a growth appears to stand still as cold weather approaches. If short of hay, the grower may be tempted to cut this crop but if he does he is likely to weaken his next year's stand. There is experimental evidence to show that as winter approaches alfalfa plants attempt to build up reserve food in their roots for winter protection. Such an aftermath will offer considerable winter protection to the alfalfa plants.

Satisfactory Feed for Heifers During Winter
 What feed should be given dairy heifers in order to winter them satisfactorily for fall calving?
 a. When legume hay and corn silage are available—hay and silage at will and two pounds daily of corn, cane, or kafir grain.
 b. When legume hay but no silage is available—legume hay at will and two pounds of grain per day.
 c. When corn silage but no legume hay is available—silage at will, some dry roughage as hay or fodder, and two or three pounds of a grain mixture consisting of one part of some high protein feed as cottonseed meal, linseed meal or gluten feed, and one part of corn, oats, or bran.
 d. When neither corn silage nor legume hay are available—buy legume hay. Feed one-half legume hay, one-half non-legume roughage, and two pounds daily of a mixture of two parts corn and one part high protein feed.

Applying Limestone

Lime applied in the fall should be disked into the soil both immediately after applying and again the next spring. The extra time gives it an opportunity to become available for the young plants as soon as they germinate. If applied in the spring the applications should be larger because there is less time for the lime to dissolve in the soil. Winter applications are not as effective as fall because there is no opportunity to work the lime into the soil until spring.

Agricultural Notes

Shavings are better than straw for litter and for nest material to prevent soiled eggs.
 Too much or too little fertilization of vegetables may increase their susceptibility to disease.
 Plenty of water must be used in putting up stover silage, since the fodder itself is perfectly dry.
 Ask your county agent about the new way of protecting poultry against chicken pox by vaccination.
 Shredding cornstalks or putting corn in the silo have been found unusually effective means of corn borer control.
 Build the out-take flues for your barn ventilation system from the mow floor to the eaves while the mows are empty.
 Trouble with stringy milk may usually be overcome by thoroughly boiling and disinfecting all utensils, according to dairy experts.
 Silo filling is expensive, but in spite of the expense there is no other method of utilizing corn that gives as large returns per acre as putting it in the silo.
 Farms on which weeds are kept under control have less plant disease than farms where uncultivated areas grow up into luxuriant masses of weeds.
 A sharp nose indicates curiosity; a flat one, too much curiosity. And big ears denote generosity—of nature.

PERSONALS

Wm. Behrens went to Troy Sunday on business.
 Oscar Raby was a business visitor in Lewiston Monday.
 Miss Laura Stephenson was a passenger for Orofino Friday.
 G. N. Buckallew of Juliaetta was a Kendrick visitor Monday afternoon.
 Mr. and Mrs. L. J. Pearson and family were Clarkston visitors Sunday.
 Bob Spencer spent the week-end at the home of Mr. and Mrs. Geo. Leith.
 Everett Crocker and Henry Gallaway went to Lewiston Friday on business.
 Allie Foster spent the week-end in Southwick with her sister, Mrs. N. G. Bateman.
 W. J. Carroll was a passenger for Orofino Sunday on business, returning Monday.
 Mr. Welch of Jensen-Bird & Co., Spokane, was calling on the trade here this week.
 Frank Brocke, who is employed in the bank at Troy, spent Sunday with him folks here.
 Mr. and Mrs. N. E. Ware spent a few days in Lewiston the first of the week visiting relatives.
 Mr. Kemper of the Vollmer-Clearwater company, Lewiston, was in town Monday on business.
 Walter Thomas was up from Lewiston Wednesday looking after business connected with his store here.
 Chas. Flatt came over from Moscow and spent the week-end with his uncle, Rev. A. E. Jones, and family.
 Mrs. Seibert Hogarth of Anatone, Wash., is visiting at the home of her parents, Mr. and Mrs. Fred Crocker.
 Mr. and Mrs. Everett Crocker and Mrs. Seibert Hogarth spent Tuesday in Southwick at the Jack Travis home.
 Wm. Dysert, representing the International Harvester company of Spokane, was calling on their dealer here Tuesday.
 Miss Irma Candler arrived from Lewiston Sunday to care for her grandmother, Mrs. C. B. Candler, who is quite feeble.
 Mrs. Philip Asplund and children of Troy are spending the week at the home of her parents, Mr. and Mrs. E. H. Dammarell.
 Geo. Brocke made a trip to Cottonwood Sunday looking after the interests of the International Harvester Co., of which he is agent.
 Ray Griffith of Los Angeles, Calif., went to Spokane last Friday after a few days' visit here with his sister, Mrs. W. L. McCreary, and family.
 Miss Dammarell, primary instructor in the Genesee grade school, spent Wednesday evening at the home of her parents, Mr. and Mrs. E. H. Dammarell.
 T. J. Buckles of Lewiston was in town the first of the week. Mr. Buckles has a farm up on Fir Bluff and he says it will soon be time to go up there and get busy.
 Paul Schulze will return to Kendrick Saturday and will again take up work in the Main Street garage. Mr. Schulze has been with the Blackwell Motors at Lewiston since last fall.
 Mr. and Mrs. Harry Ameling and son, Dickey, and Mrs. Bertha Eicher and son, Harley, returned Monday afternoon from an extended visit at Santa Monica, California. They left Kendrick December 7.
 Mr. and Mrs. C. M. Blackburn returned to their home at Cavendish Saturday after spending a week here at the home of Mr. Blackburn's parents, Mr. and Mrs. C. C. Blackburn, who have been ill for the past week.
 Mr. and Mrs. Robert Emmett of Genesee came over Wednesday for a short visit with Mr. and Mrs. James Emmett and to attend the basketball game in the evening. They were accompanied by Mrs. W. D. Riddle, wife of the superintendent of the Genesee schools.

Rabbit Is Troublesome When Not Restrained

In regions where the common rabbit is unusually abundant garden and truck crops may suffer quite severely. Melons, beans, cabbage, and similar crops are usually more attractive to the young rabbits than grass or clover. Where it is not possible to protect the crop with a wire fence, some relief may be had by carefully utilizing bits of poisoned vegetable, apple, or small quantities of poisoned grain. On a small area, however, by watching just at dusk and shooting the young rabbits is perhaps a quicker and more satisfactory and safer method. Besides the young rabbits make very good eating. By spending a little time each evening after the day's work is over one can usually kill or drive away rabbits from the garden or from exposed truck patches.

Nation's Wheat Belt

The wheat belt of the United States includes Missouri, Kansas, Nebraska, Wisconsin, Minnesota, North Dakota and South Dakota.

England's Largest Forest

The New Forest in England, with its 60,000 acres, is the largest in that country.

BYRON DEFFENBACH

FOREST AND SHADE TREES FOR BEAUTIFYING FARMS

When an Idaho farmer plants forest and shade trees about his farm or residence he is creating a threefold asset. Usually the first thought in tree planting is to make the farm more attractive and this can be accomplished very cheaply, since the State Nursery at Moscow supplies tree stock to farmers of the state at half cost of production when planted to woodlots, windbreaks and roadside plantings. Over and above the aesthetic value though, the farmer is establishing a future source of forest products in the way of fence posts, poles, props, bridge timbers, wagon tongues, double trees, etc. Incidentally too the farmer is providing a protection in the way of shelterbelt for his livestock, farm buildings and field and orchard crops. Instances are on record where such plantings have considerably increased the sale value of farms.
 A recent University of Idaho bulletin lists the various forest and shade trees available from the State Nursery the coming spring and a copy may be obtained from County Agent L. B. Taylor. This bulletin designates the forest and shade trees most suitable for planting in the various counties of Idaho besides giving general information on planting and care which should be observed to give best results.
 Thirty-seven species are available from the State Nursery this spring and among the new trees added this year are the Siberian elm, red mulberry, and Siberian pea tree. The trees are grouped according to confifers and hardwoods, the former being commonly called evergreens, and the hardwoods are the broadleaved or those that shed their leaves in the fall.

Expect Increase Electrical Appliances

An optimistic outlook for the Inland Empire was reflected at the merchandising conference of thirty-five district agents of the Washington Water Power Company held at the general offices in Spokane last week. The agents represented the 88 communities of the Inland Empire served directly by the electric service company.
 "The outlook for the year is very promising, and we expect a considerable increase in merchandise volume over the previous twelve months," said John F. Farquar, general agent, in outlining the sales program for the year. The agents were also addressed by M. W. Birkeitt, vice president and general manager, J. E. E. Royer, assistant general manager, Lewis A. Lewis, assistant general manager in charge of sales and R. B. McElroy, assistant sales manager.

Farm Census for 1930

Three hundred sample general farm schedules for the 1930 crop census have been received in the county agent's office and are being mailed out to farmers through all parts of Latah county.
 These schedules are sent to the individual farmers so that they can be studied and filled in and the questions answered, which will shorten the work of the census collector at the time he comes around.
 A number of schedules will be available in the county agent's office for any farmer who is interested but has not received one of these copies.

Undergoes Tonsil Operation

Word has been received that Mrs. W. J. Carroll underwent an operation for the removal of her tonsils on Friday and that she will be able to leave the hospital the latter part of this week. It will be necessary, however, for her to remain in Spokane a short time longer to take X-ray treatments.

Not to Mention—
