The Good Old Summer Time

The good old summer-time has at last reached us and those who had forgotten just how warm it could get here in Kendrick are beginning to have their memories refreshed in a way that leaves no room for doubt. While the mercury has not gone above the 94 mark thus far, it has demonstrated that it could very easily go higher on the least provocation.

P. S. and N. B.—Since the above was put in type we have had to change our mind regarding it being "only 94" for on Wednesday thermometers registered all the way from 101 to 106 down on Main street. However, no one heard of any heat prostrations such as they have in the East, with the mercury registering from 80 to 96.

A gentle shower in the evening cooled the air nicely and everybody was happy.

It's just what the beans and grain need to bring them out. Beans are growing at the rate of several leaps a day just now and those who have them are wearing a smile that won't come off, even as they are taking care of the heavy weed crop that naturally comes along.

Don't kid about safety—you may be the goat!

Did You Ever Stop to Think
"Advertising today is an engineering job, not literature or art or anything else," George B. Dealey, publisher of the Dallas Morning News observes. "In fact, the whole American system seems to be taking on the engineering aspect."
"Perhaps it is because we have an engineer in the White House or perhaps we have the engineer as a result of the general trend. It is apparent in finance, in government, and most of all in merchandising and the marketing of our enormous production of manufactured goods."
"The day has passed, if it ever existed, when advertising will do a selling job single-handed. Those who reap the big results from advertising use it as a part of a general plan, not the plan itself. Of course, this is elementary to most merchandisers, for the science of market engineering has made enormous strides during the last few years."
"Advertising is doing a bigger job today than ever before, simply because it is being used more intelligently and because the public is un-

derstanding it better. There is no longer, among intelligent analysts any question that advertising pays. Advertising always paid when properly used, and today it pays better than ever before."
