#### Deadline October 31 Farmers and ranchers in Latah

county were reminded this week that October 31 is the deadline for carrying out farm and range conservation practices in compliances with the 1940 AAA programs. Clarence A. Jensen, member of the

county agricultural conservation committee, said that conservation practices completed after October 31 would count for compliance with the 1941 program, but that many farmers would not earn the maximum of their soil-building allowance in 1940 unless the deadline is met.

Many of the range improvements, such as dam construction and spring developments, under the range conmade in the fall months. Also many and carry out other farm improve-The early deadline for completing

fall practices will make compliance checking possible before weather sets in, and will enable the Insured farmers are principally Unemployment Compensation law are county offices to complete the 1940 payments probably before the end of the year.

#### Real Road Hazard The smooth oiled finish of Ken-

drick's Main street seems a pressing invitation to many would-be speed demons, and this presents a hazard to everyone. Especially is this true at the foot of the school house hill and adjoining intersections.

Many seem to think it imperative

that they see how far they can ascend the hill in high or intermediate gear, as the case may begun their cars and cut the corner! There have been a number of narrow escapes there recently, and one of these days there won't be any "escape."

The "school zone" sign near the J. Herres home at the foot of the incline or the "Stop" sign at the foot of the hill don't seem to mean be a mighty good investment for the by the Unemployment Compensation state police to "rescind a few licenses on violators for reckless driving. We believe this would put traffic where it belongs.

The early bird gets returns.

#### CASH · WHEAT MARKETS UNSETTLED IN NORTHWEST

Advances in wheat futures markets in important domestic markets resulted in an advance of 1c per bushel in the December option at Portland, but cash wheat was someing September 27, according to the Agricultural Marketing Service. Cash prices at Portland ranged from \$30 variation according to various classes and location.

Prices at Portland on September 27, showed soft white, western white, western red and hard red winter all at 75c per bushel, basis No. 1 grade in bulk. Wheat receipts at Puget Sound and Columbia river terminals were only moderate at 455 cars for the week. Carlot receipts at these same markets since the first of July have totaled 1,195 cars less than demnity prices on export flour held Mr. and Mrs. Edwin Mielke were at 70c to the Philippines, 85c to the Americas, and \$1.00 per barrel to China, Hong Kong and Dairen.

It was reported that sales of flour to these areas was very light during

the past week, in contrast to the daughters were Moscow and Lewis-ton visitors Sunday. Sunday evening. the total sales for recent weeks Rev. and Mrs. Meske and son left have been around 25,000 tons. Local cash wheat all during the period and with exporters and elevator operreported germinating well. In some feeds markets were about steady at Mr. and Mrs. Glen Wegner and the recent price declines.

The general wheat situation reatives in Moscow Saturday.

Mrs. Minnie Heitman and son and seeding of winter wheat made Walter of Lewiston spent Sunday slow progress from the Mississipper valley eastward, with moisture insufficient in most places for good germination. Texas seeding continued good germination. Oklahoma soil is A. O. Wegner and son Bob of in satisfactory condition in most Pullman were here on business Fri- places and recent rains will stimulate additional seeding. In Kansas with Mr. and Mrs. Walter Dennler the state and about half in the on Fix ridge. wheat has been sown because of Moscow and Lewiston visitors Mon- ka, seeding is about completed.

Argentina reports weather favor-Mr. and Mrs. Walter Koepp were ing the new wheat. F. Wegner, Herbert and needed. Trade and official sources Ernest Schwarz.

Are indicating an outturn of around Mrs. F. W. Newman and son 100 million bushels.

#### New Price-Adjustments

Newly announced provisions to be met by Latah county wheat growers in connection with the 1941 price-adjustment program are simple and clear-cut, H. F. Koster, chairman of the county agricultural conservation committee, said this week. Payments, at a rate per bushel to

be determined after the 1940 marketing figures are all in, will be made to farmers who participate in the 1941 AAA farm program; and: 1. Whose planted acreage does not exceed their 1941 wheat acreage allotments.

2. Who do not offset performance on one farm by overplanting the wheat allotment on another farm in which they are interested, either as tenants or owners. Congress has appropriated \$212,

000,000 in a special fund for 1941 parity payments. While the money is not enough to bring farmers' inservation program customarily are come from the major commodities up to the parity level, it does help farmers seed clover crops in the fall to even up the difference betwen prices farmers get and the prices they must pay for the things they buy.

#### Entertains At Bridge

Mrs. Marvin Long was hostess at a delightful bridge party in her home Tuesday afternoon, honoring her aunt Mrs. Della Ford who is her house guest this week. A dainty lunch was served at the close of the afternoon by the hostess

and prizes were awarded. Mrs. Wm. Watts received high, Mrs. Roy Ramey second high, and Mrs. Root was given a guest prize. Those present were the Mesdames Harold Thomas, Lowell Mason, Geo. Leith, Roy Ramey, Wm. Watts, E. A. Deobald, D. A. Christensen, Edgar Long, Mildred Rider, Della Root and

Canyon Is A Bower Of Green So green are the hillsides surrounding Kendrick, and the lawns and trees in the town, that were it not for the short days one could almost be made to believe that spring

. E. Key of Spokane.

had come again. The rains of the past two weeks have certainly done their part in the beautifying of this section. Almost every lawn in town needs mowing, but so soft is the ground

underfoot that a lawn mower is in grave danger of bogging down. Buy it in Kendrick. It's your home town - it merits your support.

Looked Like Armchairs

is a ladylike custom introduced in

the interests of modesty, you are

mistaken-at least according to some

stories on the origin of the custom.

One account, according to the Na-

tional Geographic society, suggests

that sidesaddles were first seen in

central Europe during the Four-

teenth century, the invention of the malformed "Ugly Duchess," Mar-garet Maultasch, of the Tyrol.

Another story has it that Anne of Bohemia, wife of England's Richard II, originated the sidesaddle as a

means of getting around, since she

was so deformed that it was impossible for her to use the saddles of

the day. Research has disclosed,

however, that Anne of Bohemia was

The earliest saddles, complete

Army Needs Men

cruits enlisting today are the finest type of young Americans.

To become a regular army soldier is both an opportunity and a privilege; an opportunity to learn a trade and to travel; and a privilege to belong to a group of virile, loyal young Americans upon whom the future security of our country may rest. They are the backbone of our national defense—the professionals who are expected not only to prove themselves model soldiers, but also to train others. If trouble should come, the trained man is an asset, the untrained man a liability.

The regular army is led by officers who are skilled in the profession of arms, men who combine the West Point ideals of "service, honor, country," with the human qualities of patience, tact and under-

standing. Adventure! Action! Travel! These color are a form of vitamin K. It is are the magnets that attract so thought that this discovery commany hundreds of thousands of uppletes the vitamin K problem, and standing, adventure-loving young that phthiocol is probably the sim-

of the men who seek service behind The United States army needs men; men of courage; men of ability and men of character. The re-The regular army offers many advantages. Every able-bodied young man of courage, ability and character would do well to investigate its opportunities. Do it now! An enlistment may pave the way for a useful and interesting career for you.

Any information concerning enlistment in the regular army may be obtained at the U.S. Army Recruiting stations located at Lewiston, Pocatello, Idaho Falls, Twin Falls, Coeur d'Alene or at the headquarters of the Army Recruiting Service for the state of Idaho, located at 416 Capital Securities Bldg., Boise.

# Tonsillectomy

### CELEBRATING KENDRICK'S 50TH ANNIVERSARY

With Annual

# KENDRICK

SATURDAY, OCT. 12, 1940

Kendrick's Sales Day will be held on Saturday, October 12, for the auctioning of farmers' livestock, implements, household goods—in fact anything of which they may have a surplus and wish to turn into cash. The sale will start at 10 a.m. sharp. All goods will be auctioned ABSOLUTELY FREE OF CHARGE! Farmers are asked to bring in their articles in sufficient time to have them listed by Ed. Long.

ENTERTAINMENT IN THE AFTERNOON

In the afternoon, starting about 1:30, there will be a program and sports for all as follows:

Music by the Kendrick High School Band. Historical Resume of Kendrick by Wade T. Keene

Sports Program

Nail Driving Contest for women (bring your hammers)
First prize \$2.00; second \$1.00

50-yard dash—boys under 12 years. First \$1.00; second 50c

50-yard dash — girls under 12 years. First \$1.00; second 50c

75-yard dash for boys under 21 years. First \$1.00; second 50c

75-yard dash for girls under 21 years. First \$1.00; second 50c

Married women's 100-yard dash — first \$2.00; second \$1.00

Pole Boxing contest for boys 8 to 12 years, \$1.00 to winner.

Pole Boxing contest, boys 12 to 14 years, \$1.00 to winner.

Pole Boxing Contest (bring your own saw)—have fun
First prize \$2.00; second \$1.00

Greased pole climbing contest, boys 8 to 12 years, \$1.00 to winner

Greased pole climbing contest — 12 to 100 years, winner \$1.00

(2-Minute Limit on each pole climbing event)

(2-Minute Limit on each pole climbing event)

#### SPECIAL PRIZES

\$1.00 for the largest table squash. \$1.00 for the largest cow pumpkin.

\$1.00 for the largest potato — any variety. .

\$1.00 for the largest ear of corn.

\$1.00 for the best bouquet of fall flowers — any variety.

\$1.00 for the best bouquet of roses

\$1.00 for the best bouquet of asters. Bring in your articles. You may not win a prize, but you'll enjoy the day visiting and comparing notes with your neighbor.

#### The Kendrick Stores Will Make Special Prices For That Day.

Any person residing in the Kendrick trade territory is eligible.

The Auction Sale will take place in or near the Kendrick Electric Company building.

All articles sold at the sale must be settled for before being removed. All articles put up at auction must postively be sold. Roy Glenn will be the auctioneer in charge.

Double Bill At Theatre

This week's offering at the Kendrick Theatre will be a double bill. The first offering will be "Dr. Cyclops," said to be one of the wierdest pictures ever screened. The story deals with a mad scientist, who by chance, discovers how to use radium to reduce full-sized human beings to tiny dolls, but 14 inches in height. This feature is in technicolor, and is said to be packed full of interest and to rival "Frankenstein," "The Werewolf of Lodon," and others of like nature.

Moon," has Gene Autrey and Smiley Burnette in the leading roles. This s another of those musical westerns that have proven so popular.

Mrs. E. L. Atkinson of Southwick underwent a tonsillectomy last Thursday afternoon, September 26.

Germ of Tuberculosis Plays Vital 'Double Role'

The germ of tuberculosis has been described by Dr. William Charles White as a "Dr. Jekyll and Mr. Hyde" of the medical world-a killer in one role, a life-saver in an-

Dr. White, chairman of the medical research committee of the National Tuberculosis association, explains that from the germ science has obtained a form of vitamin K, the anti-hemorrhagic vitamin which prevents or checks fatal bleeding in obstructive jaundice.

"There is a possibility that it also may be used to prevent bleeding in surgery," Dr. White said.

"It is surprising that good may come from tuberculosis by the discovery that the yellow crystals which give the tuberculosis germ its that phthiocol is probably the simplest member of an homologous series of anti-hemorrhagic sub-stances."

Phthiocol was first extracted from the tuberculosis germ and even made synthetically by Prof. R. J. Anderson of Yale.

87-Year-Old Deer Hunter

Eighty-seven-year-old Tom Peacock, of Saranac Lake, N. Y., went deer hunting last year as usual. He carried his own pack basket and rifle, as he has for about 75 years. He hiked into the forest with the heavy load on his back and kept apace with companions one-quarter his age. The leathery, white-thatched Adirondack guide didn't get a shot. Tom Peacock has hunted almost every kind of wild game in North America since as a boy he bowled over himself and a deer at opposite ends of a kicking flintlock musket. He likes to recall times past when he hunted elk to feed railroad work gangs in the West, moose in Canada, bear and mountain lions in the Rockies, or deer in his home country. He once killed four Colorado elk with three shots.

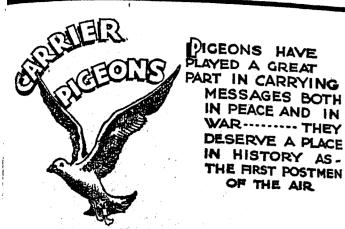

First Modern Aviator

The present widespread interest in aviation and the expansion of the United States airlines into South America recalls the fact that the first flight made in a self-propelled flying machine was the flight by Alberto Santos-Dumont, who was born in Sao Paulo, Brazil, in 1873. Records show he made a flight in Paris in an elongated balloon propelled by a gasoline engine in 1898 and, in 1906, made a flight in a machine built on the principle of the box kite. A monument to the memory of Santos-Dumont is found in the city of Sao Paulo today.

Meaning of 'Suspended'

A youthful motorist was haled blushingly, thanked the judge-and departed.

into Salt Lake police court on a charge of driving a car with faulty license plates. The defendant said the plates had just fallen and he was heading for a garage to get them fixed. The judge fined him \$5, but added: "Fine suspended." The youth started reaching in his pocket for the money. The judge suggest-ed he look up the courtroom dictionary. The defendant did, returned his hand to his pocket

### The Kendrick Gazette

#### Fluorescent Lighting

vice at Moscow has announced that due to necessary changes in the schedule of radio station KRLC, the 'Jobs For America" program will be heard at 11:30 a. m. on Fridays instead of 11:15 a. m. as heretofore. These programs were prepared by the National Broadcasting company in cooperation with Bureau of Emof tomorrow, ployment and are proving of great interest to every person, employer

and worker alike in this territory. Four programs remain to be run in the current series, as follows: National Labor Pool, September 27; Veteran's Placement Service, October 4; Placement of Physically Handicapped, October 11; Itinerant Service, October 18.

Program Hour Changed The Idaho State Employment ser-

These presentations are being made possible each Friday at 11:15 a. m. through the courtesy of radio station KRLC at Lewiston, as a community service.

Start Lifesaving Campaign Governor Bottolfsen has called apon every member of every safety committee to organize in each county and start an active campaign against needless highway tragedy.

If members of various committees in various counties meet and take counsel among themselves some definote program peculiarly fitted to cope with local traffic conditions will suggest itself.

The State Police and indeed all enforcement agencies will do all in their power to prevent accidents, but real success in a safety campaign can be attained only if the people become aroused, and really cooper-

Trade in Kendrick. Buy from men you know. Get your money's worth.

### Has 'Daytime' Effect

Fluorescent lighting, already widely used in stores, art museums. theaters and restaurants, will open up a hitherto untouched field of decorative colored lighting in the home

So prophesies a prominent United States lighting consultant.

With fluorescent lighting augmenting, but not necessarily rivaling the present type of incandescent lamps, we may look for them to go hand in hand with each other in the homes of the future to achieve that soft warm daylight effect which best brings out the shades and tints of our home furnishings. Architects and builders already are beginning to appreciate the possibilities of flu-orescent lighting in the home.

Because a daylight effect can be achieved easily with fluorescent lamps, they are especially effective for lighting bathroom mirrors, for powder rooms where makeup can be applied to look as it will look in daylight, for lighting pictures and tapestries, artificial windows, coves, niches and for unusual lighting effects in halls and living rooms. They also are proving acceptable for lighting work surfaces such as kitchen tables or desks.

Fluorescent light is achieved by transforming invisible ultra-violet rays into visible light by means of various chemicals. The chemicals are sprayed on the inside of the tubular lamps, and by the proper selection of chemicals, various colors are obtained. The lamps 'are available in the following standard colors, daylight, white, gold, red, blue, pink and green.

The new lamps are more efficient, producing white light, for example, while using one-third the electrical energy required for ordinary lamps. In such colors as blue and green, fluorescent lamps are up to 30 times as efficient as the incandescent va-

Fluorescent lamps have a longer rated life and the colors endure for the life of the bulb, but the cost of the entire installation is higher since much of the equipment has not yet entered the mass production stage and might still be classed as tailormade. The lamp itself costs approximately 10 times as much as the incandescent type does now, and each bulb must have its own operating mechanism, which sells for about \$1.50.

#### X-Rays of Old Paintings Help in Detecting Frauds

An exhibit of specialized X-ray films at Harvard university shows that several paintings, traditionally attributed to the Flemish master, Rembrandt, may really have been the work of his pupil, Ferdinand

On one disputed picture, a por-trait of "Saskia," the underpainting is weak and experts believe Bol may have done that part of the work and Rembrandt finished it. The shadowgraphs show that Bol's underpainting usually was cruder and less decisive than the master's.

Harvard has more than 3,200 Xray studies of paintings and they are expected to help in detecting forgery, determining authorship of pictures, and discovering whether

they have been touched up.
One study reveals that the "Vision of a Monk" was painted about 1700, but that years later a pillar and an angel were added. An angel also was added to the Fifteenth Century picture, "Annunciation to the Madonna of Her Approaching

The X-rays also reveal how artists change their minds while paintingrearranging figures or changing the pattern of the work-in-progress.

#### Wallpaper's Varied Uses

Wallpaper's primary use is as a covering for the walls, but there are many other functions this material may serve. Manufacturers are promoting the use of wallpaper as a ceiling covering on the basis that it substitutes decorative interest for bare white "nothingness." Rooms gain in unity and effectiveness, they say, by the use of an appropriate ceiling paper blending into the walls. The interior of cupboards offers opportunity for effective wallpaper use. Modern paper designs form excellent backgrounds for china, as well as emphasizing the character and color scheme of the dining room and kitchen. Clothes closets are now being wallpapered, either to carry on the treatment of the room or to contrast with it. Unfinished plaster closets appear bare and incongruous when closet doors are left open.

#### Historic Printing Press

Among the most interesting displays in the state house at Monterey. Mexico, is an historic printing press which several times saved the life of its owner, Samuel Bangs, the first printer in north Mexico. An itinerant printer, Bangs contracted in 1817 to print manifestos and hand bills for the small group of Mexicans who were trying to continue the revolution against Spain. When the enemy forces captured him his life was spared because he was the only man who could operate the press. He willingly went to work printing propaganda for the royal army and later was several times traded off with his press to other Mexican governors and groups of soldiers. The press he used eventually was taken to Monterey and is now carefully

#### **Building Survey Reveals** American Idea of Home

When you suggest owning a new home to the average American, he or she thinks in terms of a house costing less than \$6,000, and contemplates between 10 and 15 years to pay off the debt. And one out of every two thinks that a down payment of 25 per cent or more is advisable.

These are some of the things that the committee on trends of the United States Savings and Loan league has learned from a questionnaire on public attitudes. Surveys were made of the attitudes of people selected at random, including 5 per cent factory workers, 7 per cent proprietors of businesses, 20 per cent housewives, 16 per cent professional workers and 12 per cent salesmen and miscellaneously employed others.

The eastern seaboard, a middle western metropolis and the Rocky mountain and Pacific coast area were scenes of the questionnaire.

Results of the last six years emphasis by government agencies on the monthly repayment home mortgage, which is a century-old heritage from the savings and loan institutions, show prominently in the survey. Nine out of every 10 persons would prefer an amortized mortgage in financing their homes. The league committee points out that before the depression only those who were borrowing money from the thrift and home financing institutions-about one-third of all the mortgagors—were making steady payments to reduce their debt on the home.

#### Internal Combustion Idea Traced to 15th Century

The idea of the automobile dates back to the Fifteenth century. The scientists in Leonardo da Vinci's time did not visualize the streamlined vehicle of today, but they toyed with the idea of mixing air and fuel, igniting the mixture in an engine and using the power for driving machinery.

There were all kinds of ancient ideas about the internal combustion engine, says the American Petroleum institute. In the Seventeenth century a Dutch scientist, Christian Huyghens, proposed to manufacture a "gunpowder engine." It was not so good, but it renewed interest in the possibilities of the internal combustion engine.

In the Eighteenth century people were agog over an engine which would run on coal gas. It was built by John Barber, an Englishman. Designs were improved, development was expedited and the internal combustion engine manufacturing industry really was born. There were "double-acting" engines which used the crankshaft, connecting rods and piston assembly about the same as they are used in the modern internal combustion engine.

The German engine designer Otto adapted the principles of the first four-stroke-cycle theory advanced by the French scientist Beau de Rochas. It became the forerunner of today's four-cycle automotive gasoline engine.

#### Milwaukee's Blind Bowlers The Friday night scene at a Mil-

waukee bowling alley differs little from the ordinary night in this center of the tenpin sport, but the bowlers are blind. Each man steps surely to the racks, balances a ball carefully to be sure he has the right one, steps into position, strides forward and shoots the ball down the alley. Then the visitors notice there's no cheering for a strike until an attendant calls out: "A strike, Jim!"
Or perhaps the kegler gets a bad split, and when the numbers of the pins left standing are called there's a sympathetic moan. Bowling and other sports are helping to rebuild the confidence of the 26 members of the Milwaukee Athletic Club for the Blind. The night that Walter Wenzel bowled a 207 game, for instance, marked another triumph and gave his sightless comrades a new goal. Bowling, swimming and gymnastics are their favorite sports, but the members also have tried golf and a modified form of base-

Japanese Memorial to Premier Tokyo, Japan, will preserve the

residence of Korekijo Takahashi, once premier and many times finance minister, as a memorial park. Soon after the financierstatesman was murdered by soldiers in the outbreak of February 26, 1936, his son gave the residence to the city. The house was moved to Tama cemetery. Takahashi had a three-story warehouse on the property. In it he stored images of Buddha, picture scrolls, objects of art and many books in English. The warehouse will be made into a memorial hall.

#### **Testing Auto Drivers**

Isaac Hart, 46 years old, of Trenton, N. J., who was granted his first automobile driver's license in 1919 and has driven for 20 years with "no one knowing and evidently not caring whether I was capable of driving or not," has offered to take a physical examination to determine his fitness. In a letter to Arthur W. Magee, state motor vehicle commissioner, Hart said he hoped to "start a movement through which every driver of an automobile in the United States will be compelled to pass a periodic test proving his fitness

#### Good Postal Twine Made from Cotton

Uncle Sam as postal clerk uses carloads of twine each year for tying bundles of sorted mail. He has been using jute twine—for economy and because the cotton twine available has not had the combination of qualities most desirable for a postal twine.

For tying bundles of letters twine should be strong enough to hold despite rough usage. It should not be so fine that it cuts the bound letters, and should not be so strong and fine that it cuts the hands of the clerks when they tie the bundles and break the cord. The twine must not stretch enough to allow the bundles to loosen and the letters to scatter under rough handling.

The United States department of agriculture reports a new cotton twine developed that has proved satisfactory in preliminary tests in the actual handling of mail. Treatment of the twine with a sizing mixture containing a small amount of pinetar oil (to keep down mildew) and drying under tension removes most of the stretch and improves the strength. The twine breaks well after tying, but holds the bundle safe in the pouch.

Moreover, the new cotton twine runs about 1,350 yards to the pound, as compared with about 850 yards to the pound of jute twine-so slightly higher price for cotton twine would be offset by the increased yardage. In this work the department had the co-operation of a large twine manufacturer.

The post office advertised for several carloads of the new cotton twine, but the twine manufacturers were booked so far ahead on orders that they could not make deliveries within the required time and could not, therefore, submit bids.

#### U. S. Families on Relief Buy 'Protective' Foods

What do families on relief actually by with blue stamps issued free as a practical method for distributing foods of which there is a surplus supply? What foods do they choose when they have opportunity to select as they please from a limited list

of surplus foods? It is too early to draw general conclusions, says Milo Perkins, in charge of the United States department of agriculture food-stamp program. But for a six-week period the stamp holders spent a little more than 80 per cent of their blue stamps for "protective" foods and a little less than 20 per cent for flour, corn meal, rice and beans. Butter, eggs, and fresh fruits and vege-

tables have protective values. For this period the stamp plan was effective in five cities. There were minor differences in administrative methods to discover which variations of the basic plan seemed! to work best. In general, orangecolored stamps, which were bought by the relief family, could be used to buy any foods, and half as many blue stamps given free could be spent only for foods on the official surplus list. At that time the surplus list included butter, eggs, oranges, grapefruit, peaches, pears, cabbages, peas, tomatoes, onions, dried prunes, white flour, graham flour, corn meal, rice, and dried beans. Nutritionists do not class the last five items as "protective"

#### Blind Carpenter's Building Robert L. Grove Sr. of Pittsburgh,

Pa., is building a three-room addition to his house "by feel." Grove, a carpenter for 45 years, has been virtually blind for six years. Grove decided to build the annex because he couldn't stand idleness. He built the main dwelling of four rooms in 1929. Grove's blindness does not appear to handicap him greatly. Already he has made excavations, laid foundations, set in the sills and the building has begun to take form. The blind carpenter uses a T-square or a strip of lumber to guide him while sawing lumber, but driving nails is his biggest problem. He holds the nail until the hammer-head begins to pinch his thumb and forefinger, then lets go and sinks the nail with one or two more strokes.

Mississippi's Landmarks Along the Natchez trace in Mississippi, one of the most historic thoroughfares in the East, are such picturesque landmarks as Rocky Springs church, ruins of the Red tavern and Elizabeth Female college. This institution, the first women's college in America to confer degrees on women, was chartered in February, 1819. Audubon, the celebrated ornithologist, was a member of the faculty. Both before and after Mississippi became a state in 1817 the Natchez trace was the road followed through woods and swamps by thousands of incoming settlers.

Miracle of Glass "How far that little candle throws

his beams!" Yes, were it not for the impurities of our atmosphere it could be seen 40,000 miles by means of the giant 200-inch mirror being installed on Mount Palomar in southern California. And glass makes that mirror practicable. Thus glass in a telescope brings the distant world closer. In a microscope it makes the minute world larger. In a camera it makes the fleeting world permanent. In spectacles it makes the world clearer.

NEW DRUG AIDS WAR ON PESTS

Kills Insects Without Injury | Machinery Rated as Chief To Animals.

Government chemists have developed and proved a new drug, known as phenothiazine, which will kill insects without injury to warm-blood-

ed animals, including man.
Scientists who conducted the research said phenothiazine is "one of the most versatile chemical substances brought to light in recent years." It has not as yet been placed on the market.

As soon as manufacturers make application to the secretary of agri-culture, phenothiazine will be released as a medicine for treating certain infestations of sheep, swine and horses which heretofore have resisted medication.

As an insecticide, phenothiazine has been specifically effective in controlling such pests as the coddling moth, Mexican bean beetle and grape berry moth. It has not been effective against the boll weevil, tobacco hornworms and the Japanese beetle.

The drug has proved effective in the control of mosquitoes, but its use is somewhat limited because of the cost. But for rock garden ponds for example, enough phenothiazine to prevent mosquito breeding will not harm goldfish, nor is it harmful to wildlife that might drink at treat-

#### Flexible Farm Lease

Cuts Moving Losses More than four-fifths of the Farm Security administration tenant borrowers now have written leases. one-fourth of which are either automatically renewable or run for periods of more than one year, said Dr. Will W. Alexander, FSA administrator, in a recent report to the secretary of agriculture.

Favoring written leases is one of Farm Security's steps toward slowing down the movement of tenant farmers. In 1935 one-third of the tenant farmers — approximately 5,000,000 people—moved. Minimum cost of moving was \$50 per family, for the families involved. Landlords also suffered damage and depreciation. The nation lost by waste of soil encouraged by such tenure practices. "Oral agreements lead to disagreements and unnecessary moving," Dr. Alexander comments.

A flexible farm lease form has been prepared by the Farm Security administration which can be fitted easily to needs of farmer and land-Mords in any part of the country. It provides that the lease shall continue in effect for several years, or that it shall not be terminated by either party without written notice to the other, several months in ad-

#### Best Churning Cream

Determined by Tests The best test for cream to be churned into butter is about 29 per cent-at least from the standpoint of avoiding loss of butterfat with the buttermilk, according to trials of the Wisconsin agricultural experiment station.

Cream testing 29 per cent had a satisfactorily short churning time of less than 36 minutes. Cream with a test of 21 per cent churned in 28 minutes, and 25 per cent cream in 32 minutes, but the time and power saved with these lower testing creams did not offset the disadvantage of losing more fat in the buttermilk.

This work showed it is doubly desirable to avoid churning cream with a higher test than 33 per cent, because under such conditions there is not only a high loss of fat but also a tendency toward salvy or oily body in the butter.

All these trials were carried out with cream standardized to a desired butterfat content, pasteurized at 150 degrees Fahrenheit for 30 minutes, cooled to 45 degrees, and held for 16 hours at that temperature, and then churned at 50 degrees in motor-driven churns operating at a fixed speed.

#### Fish Meal as Feed

Two per cent of codliver oil in the chicken fattening ration or 2 per cent of best quality codliver oil plus a 15 per cent level of high-grade fish meal, fed for a six-month period up to the time of killing, was without detrimental effect on the flavor of the meat, either fresh or stored. This was the finding with Light Sussex chickens in a test reported from the school of agriculture at Cambridge, England.

#### Bang's Disease

Failure to eradicate Bang's disease in dairy herds usually is due to three factors. First, farmers D are taken out. In homogenized may fail to remove promptly all aborting cows from other cattle and A are distributed throughout the to destroy the aborted material before it has infected other cows. Second, owners may introduce into their herds cattle carrying the close intervals.

# FARM

FARM ACCIDENTS CAN BE STOPPED

Hazard to Safety.

By J. B. RICHARDSON

Safety on the farm is largely home-made. One of the reasons there are so many accidents on the farm is that farm families operate largely on their own responsibility. For city people at work or at home, there are numerous safety precautions, and someone to enforce them.

Machinery should be listed as a top hazard in farm work, despite the many improvements made on machinery in recent years. The older hazards, such as unruly bulls and kicking horses, is next.

Surveys show, however, that most accidents are caused by carelessness such as haste, the use of makeshift repairs, by taking chances, by using machinery without guards, or with guards removed.

Among the reasons why the farm is a fertile field for accidents are these: Much farm work is done by individuals at some distance from others so that an accident may be serious because help is not at hand. On the farm there are frequent changes in work and machinery used, which may mean unfamiliarity with equipment and less accuracy of movement. Under the pressure of summer work, there are often long hours in the field, and chores done in a hurry after darkboth conducive to accidents.

The suffering, the loss of time, and the actual cash cost of these accidents shows the need for avoiding them. It has been shown time and time again that the wellordered farm, with well-ordered activities, is good insurance against

But still, to a great extent the farmer must be his own safety engineer and almost entirely his own disciplinarian.

#### Insect Traps on Plane

Detect Spread of Pests By trapping insects high in the air entomologists are able to gather valuable new information on the habits, and particularly on the spread, of some of the destructive pests of farm crops. Inspection of the mixed catch of insects taken at a certain altitude is useful, for example, in indicating whether a certain type of insect makes most of its advance by flight under its own power or goes a long distance at a time by soaring high and letting the prevailing wind carry it.

P. A. Glick of the United States department of agriculture in systematic airplane flights over Louisiana and Old Mexico, and covering all seasons of several years, collected many of the important and destructive crop pests. He reports captures of boll weevils at 2,000 feet, spotted cucumber beetles at 3,000 feet, and leaf-hoppers at altitudes up to 13,000 feet. Mosquitoes, com-mon in lower layers, also were found as high as 5,000 feet. The pink bollworm moth collected, sometimes more than half a mile above the surface, showed that it can spread to our country by natural means. Some small wingless insects were frequent at very high altitudes; for example, springtails and silver fish at from 8,000 to 11,000

The insects were collected in traps specially designed for use on airplanes and controlled from the cockpit or cabin. In practice it was the rule to keep a trap section open for a certain number of minutes with the plane flying level at that altitude, then close the section and mount 500 or 1,000 feet and bag another sample while holding that altitude.

#### Agricultural News

During the past 35 years, "cow testing associations" have advanced from agencies for testing the butter fat of milk to full-fledged dairy herd improvement associations, keeping track of milk weights, feed records, and breeding for members, and providing a system of proving sires automatically through the United States bureau of dairy industry.

Top dressing grain fields with manure is a great help in securing seedings. Rates of application may vary from five to eight tons per acre. Poor land should get first treatment, and straw spread thinly can be used when manure is not

Removing cream from milk takes out most of the vitamin A content. If cream is removed from milk fortified with vitamin D, both A and milk the fat particles and vitamin

About 700,000,000 acres in the United States do not receive enough Bang's disease organism. Third, owners may neglect to have the Bang's tests made at sufficiently in this area. Of this area, 20,000,000 acres are irrigated.

SCHOOL COSTS By Glenn Balch

A long-accepted function of gov-ernment is the education of the country's youth. A literate enlightened citizenry is regarded as an important national asset, and there are few among us today who would dis-pute the fact. It is generally agreed that we should all have the education for which we can possibly

afford to pay.

A study of state expenditures reveals that the heaviest single cost to taxpayers is for our public schools. The annual figure to pro-vide the so-called minimum standard about \$4,500,000.

All of the money for the public state, county and school district. Each of these units of government makes certain levies for school purposes, and the total, with whatever is the amount the schools have for

education is based on a certain fixed amount, of money that must be available for each educational unit.

The common school district leaves to be a common school district leaves to be The common school district levy is three mills. The remainder of the Portland on September 1, when amount needed, less of course the "Cheaper than Driving Your Autoendowment fund earnings which mobile" rates become effective on usually run about \$550,000, must be raised by the state and county will be 3.2 cents per mile.

raised remains the same, it makes duced rates. but little difference whether the levy be by the state or the county. As payers pay the entire total anyway.

average figures for the three year period of 1936, 1937 and 1938. The total necessary for the minimum program was \$4,587,787. Of this amount, endowment fund earning averaged \$575,642 annually. State revenue to the school fund amounted to \$907,358. The three-mill district out?' levies accumulated a total of \$1,-074,076. This left an average of \$2,-030,711 to be raised by county and then you listen.'

Figures for the current year are as follows: Endowment fund earnings, \$526,259; revenue from the state levy and other sources, \$1,073, 824; three-mill district levy, \$1,070, 152; county levies, \$1,991,848. This provides the total of \$4,662,183

which is required for the minimum

Figures on your tax statements are segregated this year so that you can readily determine the exact amount of ad valorem taxes which you are paying for both public assistance and the support of the public schools.

176,000 Social Security Cards When the federal social security board recently issued the 50 millionschools comes from the taxpayers the social security account number with the exception of the endowment card, a total of approximately 176, fund earnings. It comes through 000 account numbers had been as three channels of public revenue - signed to men and women in Idaho, says a state dispatch.

Account numbers now being assigned, are going largely to young men and women taking their first endowment fund earnings and ex- jobs. Every worker employed at a cise revenue that may be available, job covered by the law has been required to have a card since the law became effective on January 1, 1937,

#### New Zealand Schoolboy

Has 'Wild' Idea of Texas Ernest Cullen, a New Zealand schoolboy, will get a fine collection of Texas reptiles and other wild life because he wrote a letter to Sheriff A. B. Carter, of Fort Worth.

Sheriff Carter chuckled when the Auckland lad wrote that "you must find it very lonely in your fort!, and asked the sheriff to use his spare time to collect some things for the school museum.

The New Zealand lad's letter was expressive of the reputation that notso-wild Texas has in other lands. The "fort" which young Cullen mentioned signified a military post here that disappeared many years ago.

"We have started a small museum in our school and our teacher tells us about the things we collect," said Cullen's letter. "Will you, please help me put in something from America? I should like to have a horned toad, the dried head of a rattlesnake, and a couple of rattles off their tails. A that I will make

"You must find it very lonely in your fort, so perhaps, it will help you pass away some of your spare time. What do you do now that there are no more bad hombres to arrest? I should like to be a sheriff and wear a silver star. With kind regards to you and the Mrs. Sheriff, if there is one . . ."

#### 100-Year-Old Woman

Debunks All Diet Fads Already well beyond the century mark, Miss Harriet L. Briggs of Rockport, Mass., attributes her long life and good health to her disre-

gard for dieting fads. A retired teacher, Miss Briggs is proud of her ability to enjoy life. She reached her 100th birthday recently and celebrated it with a sumptuous repast at the home of her niece with whom she lives.

"I eat what I want, when I want it," said Miss Briggs, in explaining her philosophy of health.

"I have found that eating is one of the real pleasures of life, and my health has been as good as the average, and better."

Daily automobile rides, reading of books and newspapers, and knitting make up her daily routine. She particularly enjoys the company of youngsters.

She summed up her philosophy in a few words: "Life begins with every minute,

Early Mahogany Furniture

and I am very happy to be alive."

Mahogany furniture dating before 1750 is extremely scarce and mostly has found its way into the hands of museums or private collections. Such furniture is very likely to be only of West Indian mahogany from Jamaica, St. Domingo or Cuba. Furniture that dates from 1750 to 1800 may be either West Indian or mainland mahogany, then as now generally called Honduras mahogany. The nearer it dates to 1750 Preaching at 11:00 a. m. the more likely it is West Indian Christian Endeavor at 7:00 p. m. and the nearer it dates to 1800, the the more likely it is West Indian more likely it is of Honduras mahogany. After 1800 the use of Honduras mahogany increased steadily, while the use of West Indian decreased due to exhaustion of supplies. Today less than 5 per cent of the mahogany imported comes from the West Indies but the percentage in furniture is greater as the West Indian, now principally from Cuba, is used for little else Before me, a notary public in and than for furniture.

> Use of Synthetic Vitamins The best source for vitamins is the garden and market—not the drug store-according to Dr. Elmer V. McCollum, of Johns Hopkins university. All essential nutrients except Vitamin D may be found in the garden, he said, and that vitamin is plentiful in fish oils, milk and yeast. There are abundant re-. sources for the maintenance of a high standard of nutrition without recourse to the drug store or laboratory for synthetic vitamins. "The use of herbs by primitive people worked," he said, "because the herbs, roots or bark brought health to a sick individual merely by supplying that which the body lacked."

> Accordion Door Saves Space
> The most difficult door problem likely to face the home planner occurs when a door is necessary and yet there is not enough space in which one may operate. One solution to this problem which conforms to modern space-saving requirements is the accordion folding door. Accordion-type metal frames provide a durable foundation to which fabrics may be attached and at the same time permit a wide choice of materials for the interior-decorating scheme. In remodeling homes it is frequently possible to install accordion-type doors where there is not sufficient space for the swing area required by the regular type door.

Where Quicksilver Comes From Quicksilver, or mercury, occurs in nature in a free state, both in lodes and placer deposits, but only in very small quantities. Commercial mercury is obtained chiefly from cinnabar ore, the sulphide of quicksilver, from which the pure mercury is extracted by subjecting it to high temperature and then condensing the vapor. The largest and richest deposit of mercury ore is at Alma-den in central Spain. It has been worked since the time of the Ro-

#### EDITORIAL

Well, Folks—Here we are again with our usual line of chatter and we sincerely hope you all read and enjoy it.

But seriously speaking, we have two big problems facing us today — can the bean crop be saved — and what can we do with our crop o fpolitical candidates that need threshing?

Undoubtedly the bean crop means most to us locally — it is important that we save all possible. We sincerely hope the loss

can be kept to a minimum.

When we get to the political crop, it too, is a serious matter. We have so many "isms" of all kinds in our country that we should use great care to select only men who believe in their elimination — and right now, if rumor is correct, there are a lot of "ism" believers on the government payroll. Let's all get together and eliminate these boys! In America there is no place for such "jackals."

Boy Friend: "Everything I touch lately seems to go wrong."
Fiancee: "Then please keep
your hands off me until we are

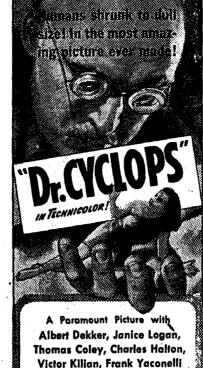

Fishermen never lie down on the job. Most anglers lie standing up, with arms outstretched.

Mary: "That husband of mine is a worm."
Sally: "Yes, I just saw a chicken pick him up!"

Wife (day after the big party): "Did you object to the way I danced on the table?" Hubby: "Yea. How did you ex-

pect me to sleep with all that racket going on over my head?" A historical novel is like a bustle, for it is "a fictitious tale

based on stern reality."

The state of the s
