E, E. McDowell is having his farm home near Kendrick wired for electric lights. A small transformer is installed on the Kendrick-Juliaetta line and this is connected with the wiring in the house, so that they will have exactly the same service

that the people in town are getting.

Considerable anxiety was felt here by the friends of the Carlson family Wednesday evening, when news was received of the destruction of the dirigible ZR-2. Arthur Carlson brother of A. K. and George Carlson of this place was an officer on the airship and first reports indicated that he was among the missing. Later developments practically assure the belief that he was not on board when the accident occurred, as his name did not appear among the casualties.

IN PEACE, AS IN WAR, IT'S

Co-operation That Wins

THE BATTLE EVERY TIME!

As we scan our daily papers we read day to day accounts of great battles fought, battles won, and battles lost — but in that account we read between the lines the results of co-operation between the winner's air, land and naval forces — one working with the other toward a common aim — to win.

As it is in the winning of mighty battles in the old countries—so it is in the promotion and growth of any town or institution - a matter of cooperation and working toward a common aim between the merchants and business men of a town and the people surrounding it.

Roads, schools, churches, farm values — all progress — hinges on the cooperation of the people of a given section — and we of the Potlatch section can point with pride to the progress that has been made in that direction in the last ten years.

But to continue that progress, cooperation must be maintained — so that is why we invite you to call Kendrick "the old home town" — and really make it your town.

We are prompted to sponsor this message to the people of Kendrick and vicinity through our interest in community welfare.

Vagaries of Style Never Effect Old Silverware

Silver is easy to buy because of the marking which is stamped on every genuine piece of silver plate, the term for solid silver. These marks or punches carry documentary evidence of its place of manufacture, its quality, the date and name of the maker. This system of marking has been in effect in England since 1300, when the Goldsmiths' guild was first established to protect the public against fraud by stamping with a steel punch all gold and silver plate.

Before a piece of silver is offered for sale by a silversmith it must be assayed by the Wardens' guild. If the quality is satisfactory it is stamped with the symbol of the town where assayed. In London this is the leopard's head. Other assay offices were established toward the end of the Fourteenth century at Edinburgh of which the mark is a thistle. The anchor stands for Birmingham and the crown for Sheffield. In addition to the mark of quality there must be the initials or private mark of the maker.

The quality, the place of manufacture being given, the next mark added is a date letter. Beginning in 1660, on May 30 of each year, a new punch was, and still is, made for the 12 months following. Every piece of silver assayed bears one letter of the alphabet which tells the date when it was made. In London a cycle of 20 letters is used, beginning with A and ending with U, the letter J being omitted. The style of the letter and the shape of the shield surrounding the letter is changed with each cycle.

Most Vegetables Lose Vitamins by Long Storage

Will cooking "kill" vitamins? This is a question that can't be answered by "yes" or "no." An article in the Journal of Home Economics summarizes research conducted at several colleges.

Vitamin A, which is an absolute essential to good eyes, is lost from most vegetables by long storage. In the case of sweet potatoes, however, storage definitely increased the A content. Ordinary boiling caused no loss and increased the A content in string beans and carrots! Freezing caused no loss, but drying robbed spinach of Vitamin A.

The researches indicate that vitamin C, which prevents scurvy, is destroyed to a greater or less extent by heat, light, alkalies and some metals. Acids and sugars have a tendency to protect C. But storing foods at room temperature, or boiling, caused high losses. Refrigeration seemed to conserve a goodly portion of this essential, while pasteurization and irradiation robbed milk of 50 per cent of its C content.

Less definite information was available on vitamin B1, although there are indications that it will withstand a considerable amount of boiling, according to the best au-

'Kindergarten'-German Heritage A little over a century and a half ago, there was born a man who made a mark upon the educational systems of his time that has endured, undimmed, to this day.

He was Friedrich Froebel, considered by many one of the greatest of educational reformers, who, in 1837, in the little village of Blankenburg, near Keilhau, in Germany, started an institution whose fame soon echoed and re-echoed 'round the world.

Froebel's youth had been completely neglected—he furnished his own best and most horrible example of how not to be reared.

Believing that children should be educated through play, through occupations which delighted while they developed the senses and the body and guided the affections-ideas deemed revolutionary—Froebel conducted his class in a room opening on a garden.

For the name of his type of school, he invented the term "kindergarten"—a German composite meaning literally "children's garden."

Adjustable Curbs for Roads Disappearing curbs, or metal

"fins" running longitudinally in the street, can be set to give threefourths of the roadway for an excess load of traffic in one direction on the North Side Outer Drive in Lincoln

park, Chicago.

There are three strips of these inverted U-shaped barriers, which are 8 inches high when hydraulically raised and level with the street when lowered. When the traffic rush is toward the business district of the city, the separations can be adjusted to provide three two-car-abreast lanes one way and one lane in the opposite direction. Three double lanes can similarly be established for the outbound evening traffic.

Vitamin Halts Hemorrhages Great progress in the treatment of spontaneous hemorrhages and hemorrahic states by the use of vitamin K has been reported by a group

of Baltimore physicians. Vitamin K is necessary for blood clotting and can be introduced into the blood stream when it is not ab-

sorbed. At the same time, the physicians reported that the existence of vitamin deficiency states has been found to be the cause of many nervous syndromes. Many cases of neuritis, a study indicates, are due to deficiency of vitamin B.

FARM **TOPICS**

PLANT TISSUE 'MIRRORS' SOIL

Furnishes an Accurate Test For Essential Minerals.

By DR. GEORGE D. SCARSETH (Soil Chemist, Purdue University Agricultural

An effective checkup of the "conveyor belts" that supply farm crops with food from the soil can be made during the growing season by means of Tissue Tests. These tests will tell whether the growing plants are receiving their principal nourishment-nitrogen, phosphorus and potash-in balanced amounts.

The tissue test of plants, like the rapid chemical test of the soil, affords a quick diagnosis of plant nutrition or starvation. The proper use of either of these tests make it possible for the farmer more accurately to determine the fertilizer needs of various crops on individual

The tissue test consists of splitting open stalks or leaf stems of corn or other growing crops and cutting out thin pieces of tissue. These pieces are placed in a glass vial containing a chemical agent. The reaction of the chemical to the plant tissue reveals the presence or absence of the necessary plant foods.

Usually six or eight samples representative of the type of plants growing in a field will suffice. Certain parts of a plant give more reliable indications of fertilizer needs than others. In analyzing corn, tissue from the base of the main stalk is best suited for a nitrogen test. For phosphorus, the tip of the main stalk or the main stalk just below the tassel is best, while for potash the base of the leaf at the ear node is most effective.

If the nitrogen supply of corn plants is deficient, the test for nitrates will be negative; while those for phosphates and potash may be high. The corn plants in such a case are likely to be stunted. Leaves will be greenish yellow, with yellowing tissues following the midrib from the tip end.

If the phosphate "conveyor belt" runs empty, tests are likely to show: Nitrates high, phosphates negative and potash high. Physical symptoms will be plants dark green in color with spindly growth, but with leaves otherwise normal.

When potash is insufficient, tests will show nitrates and phosphorus both high while potash is low. Plants will be weak, dark green in color with leaves showing a marginal scorch.

સિંદના સામાના સામાના સામાના સામાના સામાના સામાનો સ્થિ

(This is one of a series of articles showing how farm products are finding an important market in industry.)

Milk

It is a modern miracle that a man can tip his hat made of milk and yet it won't spill. Following the lead of Italy, American research workers have produced a "milk wool" which they claim is much superior to the foreign product. It is cheap, long wearing and takes color well and can probably be used for upholstering material. At present, it is going into men's hats.

In recent years, the ingenuity of government and dairy scientists has uncovered new uses for 30,000,000,-000 quarts which once was wasted. It goes into casein for coating paper, making window shades and manufacturing a paste paint which is thinned with water. It is the base for insecticide sprays and a filler for cloth. Textiles, leather tanning, and color plating industries use lactic acid in their manufacturing processes.

Akin to the many food uses are the new milk-derived animal feeds for poultry and livestock. Some ingredients for popular vitamin capsules are also obtained from milk.

Milk plastics are being made into small articles such as buttons, door handles and book ends. Casein is fabricated into lamp bases, backs for pin-up lamps, and bowl diffusers for indirect lighting.

Still in the experimental stage are wines of sherry and sauterne type which can be made from milk whey. A resin made from lactose may be adaptable as lining for food con-

tainers. There is probably more research going on in dairies and creameries than in any other industry, but in spite of the advance, there remain 24,000,000,000 quarts of skimmed milk without a commercial outlet.

Agriculture News

The farmer's share of the consumer's dollar spent for 58 different foods, averaged 42 cents in 1940, compared with 41 cents in 1939 and 40 cents in 1938.

Farmers of the United States are now passing up every year \$150,000,-000 of income that could be realized through better management of farm woods, says the U.S. forest service.

Five Simple Rules for Making Good Pictures

Anyone from a 12 year old schoolboy to an octogenarian can make good negatives, reports Hillary G. Bailey, F.R.P.S., in Popular Photography magazine. It is just a matter of following the rules laid down for developing procedure.

FIRST - Read the instructions which the manufacturer supplies with each package. These instructions describe proper manipulation for that particular type of film.

SECOND—Use reasonably fresh developer. Keep track of age and deterioration rate of your solutions. Stay on the conservative side in favor of freshness. Chemicals are cheaper than films.

THIRD—Be fussy about using a thermometer. All solutions should be kept as near as possible to a temperature of 65 degrees Fahren-

FOURTH-Use a clock to time development. Too short development reduces contrast, and too long increases it.

FIFTH-Standardize on a method of agitation. The average worker does this in tray developing by keeping the solution moving with a nondirectional rocking motion. But with tank development, it is easy to shake or jiggle the tank three times during development on one occasion, and on the next, shake it six times. The result is that the contrast and density of the negative agitated six times is greater than the one agitated three times. If consistent results are expected, this factor absolutely must be standardized.

Deaf Persons Learn to Hear Through Toes, Teeth

Through your toes, your teeth, or even your funny bone, you can learn

to hear. And a score of men and women afflicted with deafness had proved it at the University of Southern California, where they were "guests" at the nation's first class in rehabilitation of the hard of hearing.

Under the direction of Dr. B. V. Morkovin, noted psychologist and scientist, they learned to use a scientific mechanism known as the Phipps unit, which transmits sounds on the principle of bone induction.

"Through development of the other senses we teach the various methods by which the deaf can adjust themselves to their condition and be compensated for their weak hearing," said Dr. Morkovin, inventor of the technique of using motion pictures to aid in teaching lip read-

As an expert on hearing, the professor noted that 50 per cent of the soldier and civilian casualties in taining the stand of legumes. bomb-torn cities suffer either total or partial loss of hearing from the shattering concussion.

"That's why our work even has its national defense side," he explained. Should a similar situation come to pass here, we would be able to alleviate suffering by teaching the war deaf literally to feel in their mouths what others say to themeven though they cannot hear."

Borrowed Time Club

A strange organization entitled "Borrowed Timers" exists in Ellenburg, Wash. Every one of its members has been marked for death by his doctor. Not one has reached the obituary column since the start' of the organization in 1936.

They are a nonsectarian, self-governing and self-supporting group of young and middle-aged people living beyond the life spans predicted for them by their physicians.

As the club grew, it imposed a few limitations on membership. One is that 90 days must elapse, after a physician has predicted the time of death before a candidate can become eligible. This is to: "1. Soften the blow of a physician's tragic words. 2. To offer encouragement to the newly doomed. 3. To create a desire to live in the condemned and incite a mental and physical effort to remain among the living."

The hardest obstacle the club had to overcome was a periodic lagging of spirits and a tendency to "give up." But this, too, was conquered by courage.

Booing Schools

A campaign to discourage the practice of "booing" by Geneva, Ill., school children has been started by Harry M. Coultrap, superintendent of Geneva schools.

He distributed bulletins to teachers, urging them to address their pupils a few minutes each day on the un-American habit of "booing," which reached a new high during

the last election. He said: "Teachers will be asked to encourage our children to be polite, respectful and tolerant of all persons and their opinions. A chaotic state will result and mob rule may develop if 'booing' is not stopped. The foundation of our democracy is tolerance, and we must practice it in all things. The children must be taught to forget the 'booing,' by grown persons they heard over the radio in the recent election campaigns."

Tea Consumption in U.S.

America is fast becoming a nation of tea-drinkers to vie with Great Britain, according to latest figures of the U.S. department of agriculture. During the last year, more than 100,000,000 pounds of tea were imported into the United States-a 14,000,000-pound increase over the previous year.

FARM TOPICS

GOOD PASTURE REQUIRES 'REST'

Planned Control Increases Profits on Livestock.

By F. V. BURCALOW (Extension Agronomist, University of

Good pastures that provide an abundance of nutritious and succulent forage throughout the grazing season also help the farmer who has them to produce livestock and dairy products at a profit.

Present pasture grasses and legumes will not remain productive under continuous close grazing during the entire season. In most areas a planned series of pastures is needed to provide an abundance of succulent forage throughout the entire grazing period.

Available permanent pasture should be used as the basis of a planned pasture program. Permanent pastures need to be improved and most of them will respond to an improvement program.

Many have been taken too much for granted and are now weed infested and unproductive. Depleted soil fertility and continuous over grazing are two important factors causing this condition. Most of these pastures are hungry for nitrogen and need to be fed. Soil and climatic conditions determine whether the nitrogen should be fed in forms of commercial nitrogen fertilizers or through the use of legumes which can make atmospheric nitrogen available for use by the grasses. For pastures in which the grasses normally used are subject to periods of drouth dormancy, nitrogen is most economically provided by use

of drouth resistant legumes. The old adage "Take care of the legumes and the grasses will take care of themselves" could well be used as a rule for the improvement of permanent pastures, especially those which periodically suffer from drouth. A good program would consist of replenishing the soil with adequate supplies of lime, phosphate, and potash for the growth of legumes, working these minerals into the soil and preparing a seed bed so that legumes could be established.

The improved area should then be fenced so that grazing can be regulated to aid in establishing and main-

Protein Supplement Helps Beef Cattle Gain Finish

Sam L. Williams, assistant extension animal husbandman of N. C. State college, has an answer to "Can beef be prothe question: duced without a protein supplement?"

This is what he has been telling beef cattle breeders and feeders who have asked the question in recent weeks: "In my opinion it can be done, but it is neither practical

nor profitable." Then he goes on to explain that the important thing to the cattle producer is how much weight and finish he can put on his cattle and how long it will require. Efficient production is essential to greatest profit in any business, and this is especially true in the cattle busi-

ness. Some of the more common protein supplements are cottonseed meal. soybean meal, linseed meal, and corn gluten meal. All of these are

about equal in feeding value. Williams explained that the economy of feeding a protein supplement lies in the fact that such feeds are responsible for more efficient utilization of feed, larger gains, higher finish, and a greater selling price.

Insurance on Wheat Reaches New High

A record number of crop insurance contracts—420,077—has been written as protection on the 1941 wheat crop in 36 states, according to Leroy K. Smith, manager of the Federal Crop Insurance corporation.

This number exceeded by 41,-917 the 378,160 contracts written on both winter and spring wheat last year. The 1941 contracts guarantee growers a total production of 110,591,202 bushels of wheat from 10,946,284 insured acres.

"This is the third successive year that the federal crop insurance program has shown consistent gains in the number of contracts guaranteeing wheat growers protection from all unavoidable hazards," the manager said.

Care for Parasites

A drug called phenothiazine will aid the farmer in ridding horses, cattle, swine and other domestic animals of internal parasites, according to Carrol E. Howell, manager of the University of California's W. K. Kellogg institute of animal husbandry.

It was found that the treatment completely eliminated stomach worms in 37 of the animals and was from 78 to 95 per cent effective in the other eight.

Many Husbands 'Spoiled' By Wife's Poor Cooking

A good many husbands are utterly spoiled by mismanagement in cooking, and so are not tender and good. Some women go about it as if their husbands were bladders and blow them up-others keep them constantly in hot water-and others let them freeze by their carelessness and indifference. Some keep them in a stew by irritating ways and words-others waste them. Some

keep them in pickle all their lives. It cannot be supposed that any husband will be tender and good if managed in this way, but they are really extremely delicious when properly managed.

See that the linen in which you wrap him is nicely washed and mended, and has the required number of buttons and strings neatly sewed on. Tie him into the kettle by a strong silken cord called comfort, as the one called duty is apt to be weak. They sometimes fly out of the kettle and so become burned and crusty on the edges, since, like crabs and lobsters, you have to cook them while alive.

Make a clear, steady fire out of love, neatness and cheerfulness. Set him as near this as seems to agree with him; if he sputters do not be anxious; some husbands do this until they are quite done. Add a little sugar in the form of what confectioners call kisses, but no vinegar or pepper on any account. A little spice improves them.

into him to see if he is becoming tender. Stir him gently, lest he lie too flat and close to the kettle and so become useless. You cannot fail to know when he is done.

If thus heated you will find him very digestible, agreeing perfectly with you, and he will keep as long as you want, unless you become careless and set him in too cold a place.

Invention of Reaper Not Disclosed for Ten Years

Cyrus Hall McCormick invented a reaper and started an agricultural revolution.

Until the invention of the reaper, agriculture had advanced little beyond the implements of Biblical times. Man could not harvest as much as he could sow, nor as much as land would produce. A strong man could cut two acres of wheat a day with a scythe. Four of every five people in the United States were employed on farms.

McCormick's father, an iron-worker, had tried unsuccessfully to invent a machine for cutting standing wheat. At 22, Cyrus began work on the idea and in six weeks produced the first reaper. The essentials of that first machine are found in modern binders and combines.

chine for sale until 1840.

Liverpool Rummy

Something new to pass the evenings away—Liverpool Rummy—is now on the market, and in many organizations and afternoon gatherings, this game is replacing bridge.

Any number may play this game. having the usual tables of four players and progressing just as you would at bridge. It is far more exciting than the simpler games of rummy and is very easy to learn, say those who have played the game.

Liverpool Rummy may be played at home, also, with any number of players from two to seven taking part. Two decks of cards are used, with each player getting 10 cards and the remainder being placed in the center of the table and turning up one card beside it. Ace is high and counts ten. King, Queen and Jack also count ten.

Ceiling Heights Affect Heating Ceiling heights in houses are not solely matters of taste but also in-

volve the important factors of heating and ventilating, FHA officials Homes built during the Victorian

period usually had elevations of 10 or 12 feet. These heights were thought to be of aid in keeping the rooms cool during hot weather. Actually, unless the warm air was carried off properly it only served to increase the temperatures by storing up masses of warm air.

Any sensation of coolness noted was due mainly to the mental reaction of the residents, it is believed. Most experts now agree that any space more than 12 inches above the heads of windows, unless ventilated thoroughly, is of no value in cooling the room.

Church Copies Bible

Members of the Bethany Lutheran church in Cleveland have just completed a hand-written copy of the New Testament. Almost every member of the church wrote at least a page of the document.

'Our Bible may not compare with the beautiful work of the medieval artists," said the Rev. J. H. L. Trout, minister of the church, "but it means a great deal to us."

More than 450 members contributed to the making of the book. The only machine-made part is the elaborate Lutheran seal which is stamped on the hand-tooled leather

cover. The first chapter of each book was written by some person selected for his or her penmanship, and the subsequent chapters by those less

SUMMONS

IN THE DISTRICT COURT THE SECOND JUDICIAL DIS-TRICT OF THE STATE OF IDAHO, IN AND FOR THE COUNTY OF LATAH.

HERMAN C. LOHMAN,

LAVIS FREDIN; THE STATE
OF IDAHO; THE UNKNOWN
HEIRS, DEVISEES AND CREDITORS OF GUST FRED-IN, sometimes known as Gustaf Fredin, deceased; THE UN-KNOWN HEIRS AND DE-VISEES OF CROMWELL CAR-PENTER, DECEASED; and THE UNKNOWN OWNERS of the Southeast Quarter of the Southeast Quarter of Section Two, and the Northeast Quarter and the Northeast Quarter of the Northwest Quarter of Section Eleven, in Township Thirtyeight, North of Range Three, West of Boise Meridian, Latah County, Idaho; Defendants.

EDITORIAL

Well, Folks - Here it is the ast week in August — and talk we've certainly had it. Cold, rain, neat, hail, and still more rain and cool weather.

However, the cool weather and rain has been fine for the pastures, and that has meant many extra dollars in profits to you producers of cream — and remember, we want to buy that

"Daddy, what are ancestors?" "Oh, I'm one of yours and grandad is another." "Then why do people brag about them?"

"Who is that long, lanky girl over there?" "Hush! She uesd to be long and lanky, but recently she in-herited \$100,000 and now she's tall and 'stately."

"So you deceived your husand," said the judge gravely.
"On the contrary, my lord, he band," deceived me. He sai dhe was go-ing out of town and he didn't

Neighbor: "I heard your kid bawling last night." Parent: "Yes, after four bawls he got his base warmed!"

"I have a pain in my abdomen," said the trainee.
"Young man," said the army doctor, "officers have abdomens, sergeants have stomachs — you have a belly-ache!"

Judge: "What is the source of your income?" Rastus: "Ah ain't got but two, yo' honah." Judge: "Well, what are they?" Rastus: "Seben and 'leben."

BIG BEAR RIDGE NEWS

One of the most enjoyable and constructive Club meetings of the blance became almost perfect. year was held at the home of Miss Dora May on American Ridge on Aug. 15, when the Bear Ridge ladies were delightfully entertained by the Troy group. Miss Hattie Abbott, district home demonstration agent, and Mrs. Katherine Ward, canning expert with the Kerr Glass company, gave a canning demonstration. A chicken dinner was served at noon and a watermelon feed enjoyed after the demonstration. The fruits and vegetables canned were distributed among the ladies. Those present from here were the Mesdames D. J. Ingle, Lou Meyers, Claude Jones, Henry Kortemeier, Roy Emmett, Jchanna Nelson, Adrienne and Grant Clemenhagen, Ivan Whitcomb, A. W. Jones, K. D. and Gerald Ingle and Miss Berting Forest tina Forest.

Rev. Peter Hesby, pastor of the Lutheran churches of Potlatch, Deary and Bear ridge for the past 20 years, is retiring from active service in the ministry this fall. Mr. and Mrs. Bob Kane and daughter Rita and Mr. and Mrs. John Wilson and daughter were Sunday dinner guests at the Henry Kortemeier home.

Roy Fairfield, who has been ill at a Fort Lewis hospital, is home on a furlough visiting his parents, Mr. and Mrs. Leonard Fairfield. Mr. and Mrs. Henry Kortemeier and Paul were Sunday afternoon visitors at the Lien Bros. home. They spent Sunday evening with

the Leonard Fairfields. The A. Kleth family visited Sunday in the Ted Kleth home near
