You aren't getting machinery, Mr. Farmer, because...

PICKET LINES

have taken the place of

PRODUCTION LINES!

...so don't blame your Implement Dealer!

TOUR implement dealer had planned I and expected to have his display floor filled with new implements and tractors weeks ago. And we had planned to make them—had told our dealers and our farmer customers they would have new equipment and plenty of service parts for the 1946 spring work. And we had hoped to sell these machines at no advance in price.

Real Production Had Started

When the war ended, our organization bent every effort to increase production, with the result that in the last months of 1945 machinery was being built in very substantial quantities. Here are a few figures:

ITEM	PRODUCTION	
	NOV. 1945	DEC. 1945
Tractors	7,271	7,432
Combines	2,345	2,526
Cultivators	3,482	3,308
Hay Loaders	209	982
Plows		6,702
t.m.		

*Plows are made in our Canton and Chattanooga Works, which are not on strike. January production was 7,747 plows.

Both your dealer and we were encouraged by this production picture at the turn of the year. But the strike changed all that. As you know, the CIO United Farm Equipment & Metal Workers of America called a strike in ten of our plants, on January 21, 1946.

What Is The Strike About?

Wages are a basic issue. At the time of the strike. Harvester employes were among the highest paid workers in American industry. When the strike began, the average hourly earnings in the ten plants, not including overtime, were \$1.151/2. If present wage proposals are adopted, this figure will become \$1.331/2 per hour.

When the strike began, negotiations were broken off by the Union on the issue of compulsory union membership. The Company has no desire to weaken the Union. It recognizes certain reasonable needs of the Union. But the Company does oppose compulsory unionism. It feels strongly that an employe's membership should be a matter of his own choice.

Material Costs and Price Relief

Wages and materials are the great costs of operating our business-together they consume all but a few cents of every dollar the Company takes in. Wages are obviously going to be high—and nobody knows just

how high material costs will go.

In the face of rising costs of materials, the Company does not see how it can pay the wage increases recommended by a Government fact finding board until it has definite and satisfactory assurance from the Government that reasonable price relief will be granted to the Company within a reasonable period of time. This matter is of such importance that it will not be discussed here, but will be covered by future advertisements devoted to both prices and profits.

Speaking for our dealers and ourselves, we can assure you that no customer is more eager than we are to resume production. We are doing and shall continue to do everything in our power to bring about a fair settlement as soon as possible.

Building The West Today

It has been conservatively estimatways seemed to be in trouble—
drunk, unemployed, gambling. One day a friend asked her why she put up with him so long. Without hesitation she replied: "It's like this."

It nas been conservatively estimated by the "Builders of the West" that at least \$10 billion will be spent in new construction in the eleven western states during the next five years.

years.
On highway work alone the states are expected to lay out \$700 million or more in the next three years. Of this total California will account for \$200 million; Oregon and Washington \$100 million each; Colorado and New Mexico, \$75 million each; Montana \$40 million; Arizona, Idaho and Utah \$35 million each; Nevada \$25 million, and Wyoming \$20 million.
An extensive building program by

An extensive building program by the business-managed electric light and power companies of the west will also run into millions of dollars. This program is designed not only to make improvements and additions to make improvements and additions to their facilities which could not be made during the war, but also to keep their power production capacity ahead of the demand for electric

energy.

This fore-sighted policy of being prepared to meet more than current or immediately forseeable power needs enabled these companies to handle the tremendous increase in electricity demands created by new war industries after Pearl Harbor. Never once did the business-managed electric utilities fail to meet the electric utilities fail to meet the power requirements of our western

war industries.

war industries.
Other items on the west's building program will include public work, private housing, and various industrial and commercial projects.
All this construction will enable western industry to provide more jobs for its millions of workers, and more goods and products to western, national and world markets national and world markets.

Thus, by building the west, the west is building prosperity.

\$50 Billion Budget?

Predictions are being made in the nation's capital that the federal budget for the fiscal year of 1947, which begins next July 1, will call for an outlay of \$50 billion.

Although large sums must be spent during that period for veteran care and rehabilitation, for our armies of occupation, and for the interest on our vast national debt, it still seems that a \$50 billion budget is too high for a peacetime year. get is too high for a peacetime year. Of course, pressure groups which plague the city on the Potomac are calling loudly for huge government outlays which they say are necessary to prevent a depression. They work incessantly for special appropriations which, however, are aimed primarily at aiding their own selfish interests more than in serv-

selfish interests more than in serving the public good.

Congress must not permit itself to be bullied or tricked into approval of any but the most essential of expenditures. If the lawmakers keep on their toes and resist the pressure groups it is more than likely that our 1947 budget will be considerably less than the amount estimated.

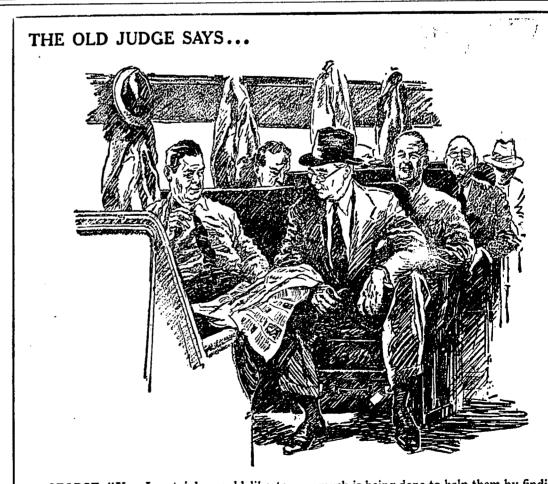

mated. Expenses stemming from the war cannot be avoided, but it is time that other government costs be held to the lowest possible minimum. A \$50 billion budget in 1947 would probably increase our national debt \$20 billion.

has its financial limits. And with our debt approaching \$300 billion, we're pushing that limit hard right

Settle the strikes and let honest work and plenty of goods have a try at eliminating special appropriations for this and that.

LST Electric Power Plants LST boats, the all-welded landing ship tanks which have played a key role in the invasion of scores of stoutly defended enemy beaches, are

veritable electric power plants. Each 300-foot long boat has 15 miles of cable and 4,000 separate items of electrical equipment for power, lighting, intercommunication, radio, radar and other devices. There are 125 electric motors and 500 lighting fixtures.

GEORGE: "Yes, I certainly would like to hear why you call that an old fashioned idea, Judge.'

OLD JUDGE: "Glad to tell you, George. Until recently, a person known as an alcoholic was generally treated as a social outcast. Little if anything was done to understand him or help him. But, during the past few years, medical research and study has developed that alcoholics are really sick people...that there is usually a deeprooted physical, social or emotional reason behind their behavior. That's why today so

much is being done to help them by finding out and correcting the condition that leads them to excess.'

GEORGE: "How many folks are there like that, Judge?"

OLD JUDGE: "Well, according to scientific research, 95% of the people who drink, drink sensibly. 5% do so unwisely, at times. Included in that 5% is the small percentage of the sick people I'm talking about." GEORGE: "That certainly gives me a clearer picture. It's the most sensible approach I've ever heard on the subject."

This advertisement sponsored by Conference of Alcoholic Beverage Industries, Inc.

Japs Develop Resources

Of Frontier Wilderness Hokkaido, Japan's northernmost home island, was little more than frontier wilderness as late as 1870. At that time it counted only 66,618 inhabitants — two people per square mile. Then the Japanese saw the value of the resources in lumber and fron ore, and at the same time realized the importance of developing the island as a buffer against enemy approach from Asia's Siberian mainland. Railroads were built and farmers from Honshu were offered inducements to try their fortunes in the new frontierland. By 1939, Hokkaido's population had jumped 50-

fold, to 3,300,000. But great as the jump was, it proved only that Hokkaido's attractions were not enough to stampede the crowded farmers of Honshu. Although Maine-sized Hokkaido has almost one-fourth of Japan's total home-islands area, it cannot yet count as much as one-twentieth of their population. Most of the growth was centered in port and railroad cities along the island's southern and southwestern shores rather than on the inland plains suited for agricul-

Containing farmlands and mountains in about the same ratio as other Jap home islands, Hokkaido is held back by its climate. If the island were transported in the same latitudes to the eastern coast of North America if would extend from the latitude of Boston to that of northern Nova Scotia. Warmth-loving farmers would rather stick to their rice economy on half-acre patches on Honshu than spread out in a region where year-round temperatures average 40 degrees F. Little more than half of its 4,000,000 farmable acres have so far come under cultivation.

Best Drugs Are No Cure for Malaria

In a discussion of quinine and atabrine in the Naval Medical Bulletin, Cmdr. Ellis H. Hudson, USNR, says the two drugs are the best we have for the treatment of malaria but that neither cures anything. To him malaria "is like a hardy perennial, always ready to grow up from its roots in liver, spleen and marrow no matter how briskly and successfully quinine and atabrine lop off the apparent phase in the blood. Of the two drugs Commander Hudson finds atabrine the better. He thinks it unfortunate that atabrine was first introduced as a substitute for quinine, as if it were a second string to the anti-malarial bow, to be used when quinine was unprocurable. The surgeon general of the navy holds that atabrine when properly used is 'as effective as quinine and in any respects to be preferred.

Commander Hudson is rather pessimistic about finding a real cure for malaria. Reptiles, birds, monkeys contract the disease. Malaria parasites have been found in 130 species of birds, but the parasites that infect them "will not grow in man (with one exception); neither do they behave consistently in respect to each other." Commander Hudson says that "it is impossible to predict whether results gained in research on bird and monkey malarias will apply to each other or to human malaria." Further, no experimental animal will "take" human malaria, and no human malaria has ever been successfully cultured. Man must be his own experimental animal and test tube.

Borneo Rubber

In the 10-year period 1932-1941 Borneo's rubber output had its ups and downs along with the rest of the world's producing areas, but the general trend was upward. In the period indicated the world's rubber yield, including Borneo's contribution, climbed from 720,000 tons to 1,500,000 tons. Top producers were the states of British Malaya and the islands of the Netherlands Indies, mainly Java and Sumatra. Together, these British and Netherlands sources managed to supply more than three-fourths of the world's annual demand for rubber. Most of the remaining need was satisfied by Thailand, Indochina, Ceylon and Borneo. Brazil, once the world's largest source of crude rubber, declined in importance after the development of large-scale plantation culture in the East, and was producing less than 1 per cent of the world's total before the outbreak of war. Biggest buyer was the United States. usually in the market for about half the world's million-ton crops.

Press Fuel Probe

Progress in finding a liquid motor fuel that can be made from farm wastes is reported in Industrial and Engineering Chemistry.' A three-year investigation under an original appropriation of \$410,000 is proceeding at the Northern Regional Research Laboratory, Peoria, Ill. The government chemists have been able to obtain 90 to 95 gallons of liquid fuel from one ton of waste, and the work is being enlarged to semicommercial scale. The product is mostly ethyl alcohol, obtained through saccharification and fermentation of wastes such as corncobs and cottonseed hulls. The product is now about 50 per cent ethyl alcohol and the rest butanols, acetone and other flammables. No consideration is given to the utilization of possible process by-products such as plastics, sugar, etc. The problem is to see what kind of motor fuel can be made without consideration of cost.

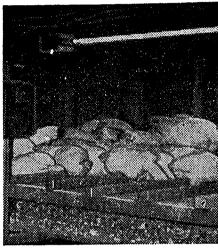

Sterilamp Proven Poultry Health Aid

Lowers Mortality and Ups Egg Production

By lessening the infectious organisms in the air, diminishing fungus and mold producing mycosis and pneumonia, and by promoting generally better health, the ultraviolet rays or sterilamp has become of commercial value in the poultry

Made of finger size, tubular pieces of quartz-like glass, these lamps emit a selected band of ultraviolet

An installation of Westinghouse sterilamps in a poultry house at New Hope, Pa., fights poultry infections and improves vigor and health of hens while they sleep.

radiations in the bactericidal portion of the spectrum.

Tests have shown that irradiated birds have a tendency to level out the peaks and valleys of the egglaying season with the gain reaching to 15 per cent, most of which comes during the winter months.

The greatest use on the poultry farm has been in the brooding of chicks. It has been proven that not only has mortality been greatly reduced by the application of bactericidal lamps, but that vigor and gain in weight of the chicks has been materially improved.

Even when the lamps are kept operating over the roosts all night, the hens rest perfectly, and gain in general health. The lamps have been given thorough tests on individual poultry farms and tests are now being conducted at various state experimental stations.

These invisible bullets of light, sprayed by the sterilamp ultraviolet tube, has given the poultry raiser a new weapon to fight his present high rate of mortality.

> Agriculture In the News W. J. DRYDEN

While a method of extracting sugar from sugar beets was discovered by a German chem-

ist in 1774, it was not until 1870 that the first successful factory was built in the United States. A new hybrid, promising 20 per cent increase in

yield, and the pill form of sugar beet planting, promises to place postwar sugar beet raising on a profitable basis. The pill's coating contains fertilizer and insecticide, with the seed in the cen-

Among the uses of sugar beets and their by-products are galacturonic acid, citric acid, carbonate of lime, rubber, road base, bombs, powder, plastics, penicillin base, medicines, adhesives, alcohol, electrodes, castings, textile, varnishes, radio tubes, and the Nazis made fortification cement from the pulp.

Auto Tire Casing Holds Bath of Water for Grindstone.

Instead of tin can for permitting water to drop on top of grindstone, a casing that is water tight and shaped so that the stone turns in comparatively deep water, may be utilized as shown.

Quick Blood-Building

By the feeding of abundant riboflavin or vitamin B2, in addition to ample protein, iron, copper and the B-complex vitamin known as pyridoxine, it is possible to effect remarkably quick recovery from the type of anemia of livestock caused by hemorrhage, according to work at the University of Wisconsin.

In the past, it has taken from six to eight weeks to regenerate the blood after hemorrhage, or even after transfusion.

House of Commons Holds Governing Power in Britain

The House of Commons is the key body in the British system of government. The prime minister and all members of the government must be members of the House of Commons or the House of Lords, but the House of Lords plays no part in the decision as to who shall be prime minister, and has only a restricted influence on legislation. It has no say on any "money bill" (i.e., one dealing only with taxation or the payment or appropriation of public moneys), and though it can hold up other bills, it cannot delay their passage for more than two

This is not to say that the House of Lords does not play an important part in the discussion of policy. Its active members are mostly former members of the House of Commons, and other persons distinguished in science, industry, the church, and public life generally. Though the government of the day is not "responsible" to the House of Lords, a certain number of members of the government are always chosen from the House of Lords, and they explain government policy in that assembly.

It is in the House of Commons, however, that complete day-to-day supervision of the government is exercised. The prime minister sits in this House. Not only must the prime minister and his government resign if defeated at any time on a serious issue by a vote of the Commons, but any member of the House of Commons can put down, in advance, any questions relating to the conduct of a government department which he wishes to have answered in "question time" by the appropriate minister or departmental representative in the Commons.

Poultry Meat Contains High Protein Content

Pound for pound poultry meat has the same quantity of protein—the most important value of meat in the diet-as other meat. Chicken giblets are especially rich in iron and vitamin A, as the edible organs of other meats are. Except for the giblets, however, poultry meat does not contain as much iron as the so-called red meats.

In that important vitamin, B 1 or thiamine, chicken rates along with beef but below lamb and veal and considerably below pork. In the other B-vitamins chicken and other meats are about the same.

Those at the family dinner table who choose dark meat get more food value as well as more flavor than those who take white meat. Dark meat contains considerably more riboflavin, and probably more iron, as well as more of the extractives or flavoring substances in meat.

Fishing Developments

New developments in the fishing industry include the first floating plant for the complete processing, freezing and storage of shrimp in the Gulf of Mexico and the use of small, portable, mechanically refrigerated containers which will enable producers to ship small quantities of perishables by railroad in the same "odd-lot" manner as is used for other merchandise. Such containers, some of them as small as 25 cubic feet, now are widely used by the armed forces to supply fresh or frozen foodstuffs to troops fighting the Japs in almost inaccessible regions. The floating shrimp plant is a 44-ton vessel, the Betty Jean, which "mothers" a fleet of 100 or more small craft. Having complete mechanical refrigeration equipment, it makes possible, within a few hours and sometimes only a few minutes after the shrimp are caught, the same operations usually performed by shore storage and processing plants which ordinarily do not receive a catch until some time after the shrimp are taken from the

Damages Skin

Aside from pain, discomfort, and loss of time from work, actual damage to the skin may result from an overdose of sun. Prolonged exposure may cause the skin to become scaly, inelastic, wrinkled, and old before its time. Mild burns cause a hot, drawn, uncomfortable feeling in the skin which is dry and red. These symptoms will disappear in about 24 to 36 hours. Severe burns are more painful and contact with bedding or clothing is unbearable. Shock, chills, fever, nausea, very rapid heart beat may all be present. The more severe the burn the longer time required for recovery. It is important that severe burns should receive medical attention from a physician. In the meantime, the application of cod-liver oil, carron oil and ice cold compresses of mineral oil are helpful.

Tin Sources Although the United States ordinarily bought nearly half of the world's total output of tin, its own yield was almost negligible. It readily satisfied its wants by imports. British Malaya, the Netherland Indies and Bolivia were the chief sources of supply. Much of the Netherlands Indies ore was smelted in the Netherlands. Most of Bolivia's prewar ore was sent to England for mixture with richer ores and refinement in British smelters. Two smelters were set up in the United States during the First World war, but were abandoned because of the high cost of operations.

Many Big Game Animals Idaho had 243,000 big game animals when the last national estimate was taken, according to a report just released by the U.S. Fish and Wildlife Service. The booklet was prepared by Hartley H. T. Jackson, senior biologist, and covers the period 1937 to 1942. The census figures

are for 1941.

The report shows Idaho's big game population as 138,000 mule deer; 28,000 whitetail deer; 37,800 elk; 1,100 moose; 17,000 antelope; 3,000 Rocky Mountain sheep; 5,000 mountain goat; 12,400 black bear, and 46 grizzly hear. are for 1941. grizzly bear.

The Idaho fish and game department noted on receipt of the report that there has since been a decrease in mountain sheep. The number within the state is now believed to be about 2,200. For other species the

1944 estimate is about the same. Big game population in Idaho, on the whole, showed an increase of 18 per cent in the 1941 estimate, compared with the last previous estimate. Idaho ranks second only to Wyo-

ming in number of elk; third in black bear; third in grizzly bear; third in bighorn sheep; fifth m moose; sixth in atelope; sixth in mule deer and fifteenth in whitetail

Eds. Note: It would be interesting to know just how they arrived at a count of whitetail deer and grizzly bear. The brush throughout large areas being full of this elusive cross of a deer and jackrabbit. And the grizzly bear, inhabiting only the wildest and most remote areas, being seldom seen.

Home institutions pay home taxes -build home roads, schools and churches. Trade at home!

1945 In Review Here are some of the important events which occurred in 1945: January 9: MacArthur's troops invade Luzon island in the Philippines. February 6: American troops cap-

ture Manila. February 19: First landings made on Iwo Jima. March 7: American forces cross

War is Never Over for the RED CROSS

They need your Red Cross today —and for many tomorrows!

HEY lie in hospitals, thousands of our finest—sick, L cruelly maimed. Who is to write their letters, hear their troubles, answer when they call for "Mom"? Mom can't be there. But your Red Cross can, and must be there.

Many thousands more Americans, still overseas, must count on the Red Cross for comfort and cheer. So won't you give to the Red Cross? This is your chance to say, "Thanks, Soldier, for all you've done!"

Potlatch

HELLO, FOLKS -

If you want to visit a "popular place" just come in and visit the creamery on butter wrapping days. It's guaranteed to be the

busiest place in town.
"Potlatch Chief Butter" is really gaining a name for itself, and it's up to you, Mr. Dairy Farmer, to see that it continues to gain in production as well as popularity. Produce, produce, and produce some more to keep "Potlatch Chief" on the market.

We are paying 55c per pound for butterfat this month, and the government subsidy is 17c per pound. That gives you 72c for every pound of butterfat you market, besides the yearly dividends you receive by marketing your cream the "cooperative way," by shipping it to us by shipping it to us.
It pays, in big ways! Ship US your cream!

There are many soft points and Moscow highway. mud holes, but the worst road in this area is that between Kendrick and Troy-which is scheduled to be gun the last of this week, has of

the possible exception of the Troy-

Field work, which might have berebuilt this coming spring - with necessity been postponed indefinitely.

saved 25% Quarts of oil in 325 hours .. with a FRAM".

Successful farmers are

saving money on oil ...

saving the time com-

monly wasted changing oil . . . and protecting

their motors by installing

FRAMS on their tractors.

There is no doubt that clean

oil will last longer than dirty

oil, nor that motors lubricated

constantly with clean oil will

cost less in repairs. The FRAM

Oil and Motor Cleaner keeps

both oil and motor clean and free of dust, dirt, abrasives,

sludge and harmful acids.

That is why successful farmers

are equipping their tractors

with FRAMS - saving money

- saving their motors - saving time. Why don't you

Says Darryl C. Grover Riceville, Iowa

Mr. Grover also says: "Until now I have changed the oil every 60 hours."

SAVED 45 GALLONS THE FIRST YEAR Fred North of Blackwell, Okla., saved 45 gallons of oil the first year after installing a FRAM. SAVED ITS COST IN

A Caterpillar Diesel 75, formerly changed oil every 35 hours. Now, with FRAM, they change oil every 20 days. SAVED 7 OIL CHANGES
IN 400 HOURS
C. D. Goyen of Pratt,
Kansas, used to change
oil every 50 to 60 hours.
Now, with FRAM, he
changes oil 400 hours.

EASY TO INSTALL New specially designed brackets, Fulflex oil-lines, make installations simple
