Our House" is scheduled for presentation on Tuesday evening, April
6th. Many posters may be seen
about town reminding everyone, and presenting further details.

Wrestling Mat In Use A wrestling mat was recently purchased for the community by one of our interested business men. To help raise funds to pay for the mat the high school is planning to put on smoker on April 20. Some of the high school boys are working out on the mat each afternoon at 2:30. If there are any fellows from out of school wishing to participate or watch the work-outs, you are welcome to drop in at the Community church basement at that time any afternoon. Any business firm wishing to assist in purchasing the mat may do so, and your donation will be appreciated very much.

went to Lewiston Tuesday evening to witness the Boy Scout Jamboree, in which Kendrick Troop No. 149, ers. a manager will also be elected. sponsored by the V. F. W., and All those interested in baseball as under the leadership of Eugene Lina well as in playing, are urged to and Jordan Kanikkeberg, took part. The boys won one prize, a second place in bowline knot tieing. They were not so lucky in other competition, but considring that this was

Gene Lind and Assistant Scoutmaster Jordan Kanikkeberg.
There were 400 Scouts and Cub Scouts taking part.

Two Freak Eggs

A. W. Jones brought to the Gazette office last Friday a couple of

freak eggs. One of these, about three inches long, and an inch is diameter, is very heavy, and our guess is that it is solid shell, rather than having the conventional yolk and white.

The other egg, if one would want to call it that, is about the size and general shape of a "regulation" small egg, but the hen left one end open and finished the edges of the opening with a "curley-mu-que." Walt says he believes the reason for the freak eggs is the effect on his chickens of the high water of about a month ago — when some of the hens apparently developed the idea "that their days were num-

Birthday Party

Mrs. Manning Onstott entertained a group of little folks Saturday afternoon honoring their little son, Ray's, eighth birthday anniversary. The time was spent playing games and hunting Easter eggs, followed by the serving of birthday cake.

Invited guests were Douglas, Ar- N. E. Walker, Clarkston, who has nold and Harvey Millsap, Donny been gravely ill for some weeks, was Travis, Helen Luman and Wanda reported as holding his own, by Her-Travis.

JULIAETTA NEWS

Mr. and Mrs. Ed. Nelson had as Easter Day callers Mr. and Mrs. Mar. and Mrs. Herman Silflow, Mr. and Mrs. Herman Silflow, Mr. and Mrs. Herman Silflow, Mr. and Mrs. Gus Kruger and family, Marjorie, Esther and Henry Wendt, and Mr. and Mrs. Kenneth Powell and family of Troy.

Mrs. Addie Lowrey and sons David and Kenneth of Pullman were Sunday callers in the home of Mr. and Mrs. Marvin Long.

Mr. and Mrs. Irvin Halseth drove to Dayton, Wn., Sunday, to attend a family picnic.

Mrs. Irvin Halseth is in Lewiston this week nursing N. E. Walker, who is gravely ill.

Mrs. H. C. Schupfer returned from Lewiston Wednesday evening of last week, where she had been helping care for her uncle, N. E. Walker, Mr. Schupfer took her back Tuesday of this week.

A. Christensen and family, which Kendrick had no dump ground.

Easter Was Beautiful Day

Easter Sunday was undoubtedly the finest spring day so far this year, with sunny skies and a temperature that gave all a chance to display their Easter finery. But, per-haps most outstanding of all, was the indication that Easter meant more than a display of clothing, for local churches were well-filled, both morning and evening, and local ministers openly express the wish that regular attendance like that could be obtained.

Otto Silflow received a painful injury Tuesday while working in the woods. He slipped and fell on his axe. cutting a deep gash in his right leg between ankle and knee. He was cared for at Dr. Christensen's office, where a considerable number of stitches were required to

lose the wound.

Falls On Axe

Enjoy Easter Egg Hunt The Primary department of the Community church enjoyed an Easter egg hunt in the park Sunday. The glorious warm day was a perfect setting for the children with their little baskets as they explored for hidden eggs.

NOTICE OF ANNUAL SCHOOL MEETING AND ELECTION

In Joint Common School District No. 24, Latah County, Idaho

NOTICE IS HEREBY GIVEN That the annual school meeting of Joint Common School District No. 24, County of Latah, State of Idaho, will be held on Friday, the 16th day of April, 1948, and the said meeting shall convene at 1:00 o'clock P. M. on said day and continue uninterruptedly until the business properly coming before said meeting is disposed of, at the school house in said district. district; provided, that the polls for the election hereinafter referred to shall remain open until 5:00 P. M. o'clock at said time and place; that at said meeting the following business will be transacted:

1. On trustee to serve for a term

of three (3) years will be elected.

2. The length of time school shall be taught in said District for the ensuing year and the seasons of the year in which the same shall be taught will be determined.

3. That at said annual meeting in said District there will be determined said District there will be determined the amount of money to be raised by special taxation, and shall determine the purpose for which the money derived therefrom shall be expended, naming in each instance the proportion of the whole amount which is to be used for the various and separate purposes. The maximum levies for current expense shall be

as follows:

(a) 10 Mills General Fund — approved at annual meeting for general expense;

(b) 5 mills High School purposes —approved at annual meeting.

(c) 2 mills Emergency Levy for General Fund — approved by 2/3 majority vote of qualified electors.

(d) High School Tuition Levy above 5 mills as required — prior approval of State Board of Education and approval an Annual

Meeting.

(e) Bond Interest and Sinking
Fund levy as needed — levied by

trustees. Legal operation levy, including 5 mills for high school purposes, is 17 mills. If 5-mill levy is insufficient to cover tuition, Common Districts may ask approval of the State Board for a sufficient levy to cover charges. For Common Districts this extra

levy is to be determined in money while for Joint Common Districts it shall be determined in mills.

4. That at said meeting general questions pertaining to school and school interests will be taken up and disposed of.

The name or names of all candidates for election of trustees, together with the term for which nominated, shall be placed on file with the Clerk of the Board of Trustees | electric unit will generate one kiloat least six (6) days prior to the day of election, excluding the day of election.

That the election at said meeting will be by secret and separate bal-Dated this 25th day of March,

Hydro-Electric on **Farms Fills Needs** Serves as Substitute **Central Power Service**

Despite the progress made by power suppliers in "electrifying rural America," the task is so vast that thousands of farms will not be reached by electric lines for several years. A number of these farms are located far from existing or contemplated distribution lines.

Farmers need not have to delay or do without electricity and the convenience, time and labor-saving appliances and production equipment it operates—if they have available a stream which will provide a head of water in sufficient volume to operate a hydro-electric unit. In most cases, a small dam is required and a pond, thus formed for power purposes, also may be used for watering stock, fire protection or recreation. Such units are capable of producing direct or alternating electric current at low cost and make use of water which might otherwise be wast-

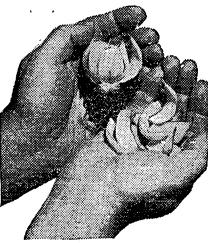

1 K.W. unit on a ranch in Montana.

The electrical capacity of units, such as that illustrated, varies from ½ to 10 kilowatts. For example: A typical unit will generate one kilowatt, with an eight-foot head of water, having a flow of 190 cubic feet of water per minute. As the head of water increases, the volume required decreases for the operation of a generator of given capacity. Thus, with a head of 25 feet, a hydrowatt with a volume flow of only 68 cubic feet of water per minute. An eight-foot head is all that is needed for those generating from one-half to five kilowatts.

Fungicides Tested By Vegetable Mice

Scales of Easter lily bulbs are very subject to attack by a fungus causing scale rot, which accounts for their adoption by Drs. W. D. Mc-Clellan and N. W. Stuart, U.S.D.A. agricultural research division, in determining the effectiveness of various fungicides at the Beltsville sta-

One fact that makes these "vegetable mice" particularly useful in testing work is that all the scales from one bulb are genetically the

The Easter lily with from 40 to 60 scales of almost china-like smoothness is well adapted to its "mouse" role in testing of fungicides.

same, and for that reason the vulnerability to attack of the rot is uni-

Some other advantages of this new method are that the scales can be used at any time of the year if properly handled, the effect of the disease attack on the scales can be read with ease because they are smooth and almost white, the chemical to be tested can be applied as dust and in a suspension or solution, the equipment is simple and takes

Chick Glands Bigger When Fed Thiouracil

Studies at Purdue experiment station have shown that a new drug, thiouracil, when fed to chickens at a level of 0.2 per cent, resulted in breeding hens, the thyroids of newly-hatched chicks were greatly enlarged. The hatchability of the eggs showed no change and the chicks appeared to be of normal vigor. vation.

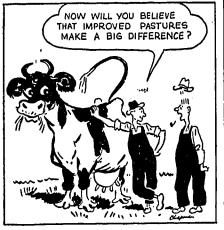

Soil May Build or Weaken Our Bodies Value of Food Depends On Mineral Fertility

"We are what we eat" and "what we eat depends on the soil that produces it," declares Dr. William A. Albrecht, University of Missouri.

"Human health troubles often come from poor nutrition which weakens the body. With its defenses down the body is less able to resist the attacks of bacteria and other forces.'

"Foods from some soils provide only fuel for energy, other soils support crops that carry something 'extra'—body building materials. Where rainfall is high and where virgin forests once covered the land, plants are barely able to put together any more than fuel foods for themselves and animals. Properly managed with lime, fertilizers and legumes, these soils can be built to put into crops these body building values.

"On the more fertile soils of the hard wheat belt, the former buffalo

prairies, where the rainfall is less, plants are able to synthesize much more than just fuel. Because of the mineral fertility left in the soil foods grown here contain body building, bone making values.

"Neglecting to put fertility such as barnyard manure, green manures, lime, and other fertilizers back into soils to balance crop removal pushes crops on these soils toward 'fuel only' crops. These 'fuel only' crops mean poorer growth and lower health values. The declining fertility of our soils is a decline in the health of our soils, of our plants and of ourselves."

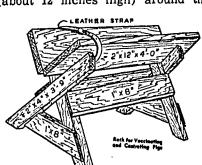

Insoluble Grit Aids Chicken's Digestion

Some insoluble grit, usually granite or river gravel, will be eaten by hens if it is available. It assists the gizzard in grinding grains and coarse feeds that might cause impaction of the digestive tract. Fine ground feed can be digested satisfactorily without grit being available. Oyster shell and limestone rock particles sometimes are used as grit but the digestive juices break these down rapidly and thus make an excess of calcium available. Grit commonly is kept before hens at all times, although some producers prefer to feed it at intervals of 10 days to two weeks.

Rid Worms in Sheep With Phenothiazine

To control stomach and other roundworms of sheep, treat each animal individually with phenothiazine just ahead of the pasture season and keep phenothiazine-salt mixture in a covered trough before sheep on

Put a fence of corrugated paper (about 12 inches high) around the

chick brooder to keep chicks from straying away and getting chilled. Move it back a little each day or so to give more room. Use it until chicks start jumping over.

To save time and hard work castrating and vaccinating pigs, make a rack like the one shown. Put the pig on its back in the V-shaped trough and, if you have no helper. use a strap to hold it.

Dipping sheep should wait until after shearing cuts have healed.

Erosion Danger Present In Nearly Every Month

The erosion hazard not only is with us always, but also it comes at any season, almost every month of the year. It is so serious that marked changes in the thyroid gland and increased the rate of fattening. When the drug was fed to all uncommon. Highest soil loss extensions. perienced for a single month in Mississippi was 62,376 pounds per acre. The loss must be combatted by terracing, ground cover and conser-

Small Shellfish Utilized In Experiments on Hemp

At the department of agricul-ture's plant industry station men, who study hemp, a plant used for its fiber, find it desirable to make "biological assays" as well as tests of the fiber, as this plant contains in its juice a narcotic they would rather reduce than increase or leave as it is. They make the tests, the "biological assays," by means of extremely small shellfish (crustaceans) called daphnias, which the casual observer, if he had a good eye, might liken to miniature shrimps. In this small size, thesetest animals come fully equipped. with alimentary canal, heart, eggs, sac, liver, eyes, shell gland, and other part too numerous to mention. The fiber scientists working on hemp improvement say the big little daphnias have many advantages for the testing work; many can be used in a small space; and they live almost a third as long as: a mouse—that is they live two months. Other points are: They can be reared in tanks at room temperature; their culture medium is ordinary water that is just slightly alkaline; they feed on bacteria; and after the first brood, they bear every two or three days all the life. span, and an individual may have as many as 400 little daphnias. If there is ample food and the temperature is kept just right (never above 80 degrees F. but may be quite cold), the females will produce offspring without need of fertilization of the eggs-that is parthenogenesis -a not uncommon shortcut among the cold crustaceaus and insensible insects. And that is just what the experimenters want in order to notethe effects of small differences in.

Rug Weavers of Orient Use Primitive Methods:

the juices of the hemp plants they?

are breeding.

For centuries weavers of rugs in: the orient washed their wool by primitive methods to remove its natural protective oil film to permit: the dyes to penetrate the fibers and! also bring out the luster and sheen in the wool. The success of these primitive methods for the processing of wool for oriental rugs depended wholly upon the skill and intuitive knowledge of individual operators. Lacking a knowledge of chemistry, the processes were developed entirely by rule of : umbexperience. Sometimes the treatment was too harsh, causing injury to the wool fibers and excessive fading or running of the dyes. But now modern science has come to theaid of an art centuries old. Extensive research has been carried out on the washing and lusterizing of wool. Most importers of oriental rugs in the United States give their rugs the final washing in this country under careful scientific control. About 85 per cent of the oriental rugs sold in America are washed in: this country, as most American homemakers prefer a silky, highsheen finish. However, about one out of seven buyers choose the unwashed type of rug with its subdued: coloring. Only rugs with special fast. dyes are suitable for washing.

Peru Is Studied

Some strange event happened in: ancient Peru between 2,500 and 3,000 years ago. An unidentified peo-ple living in Viru valley, who had been limited to the most primitive type of raising small amounts of food and who didn't know how or were unable to make pottery, suddenly expanded their agriculture and arts, including pottery making and the building of pyramids, although there was no genetical change in the people. Later cameinvasions leading finally to the Incas. Dr. George R. Willey of Smithsonian institution reports that 300 city and village sites were located? in the valley by scientists of the Institute of Andean Research as and result of airplane surveys made by the Peruvian army air force.

Revarnishing Floors Before revarnishing floors, remove-

the old, worn finish with paint remover and by careful scraping, soas not to mar the surface of the wood. If the old finish is shellac, it may be removed by softening it with denatured alcohol, followed by the use of steel wool, but in every case, care should be used to see that any residue which is left after use of the removing solvents be eliminated before applying a new coat of finish. If the floor is marred or stained, it will be worthwhile to have : it sanded with a floor sanding machine. Finally, the floor should bewell wiped with a clean dry cloth. to get rid of any dust particles. It then may be refinished by application of two thin coats of high grade floor varnish or shellac.

Turpentine Stops Foxes
To help farmers "outfox" the fox:

by keeping him out of the chicken yard, Dayton Parsons, vermin control technician of the Ohio division of conservation, advises that a two-foot path sprayed with a mixture of used motor oil and turpentine will stop Reynard with almost the same effectiveness as a brick wall. The proper proportions are one quart of turpentine to each gallon of used oil.
"If every farmer would keep the weeds cut around his chicken yard and encircle the area with a swath of oil and turpentine mixture, the fox," Parsons said, "would soon a scratch chicken from his menu."

War Prisoners Recall Pies Concocted From Dry Milk

The average "ex-kriegie" (prisoner of war in Germany) probably has had many delicious desserts since returning to the United States, but it is doubtful that any dessert ever will taste quite as good to him as his first "kriegie-pie" after being released from solitary confinement.

Prisoners of War received the majority of their food from Red Cross parcels. Each parcel contained a can of dry whole milk which came to be one of the most important items, valued not only for its nutrition, but for the many diversified foods which could be made from it.

At first, prisoners used the dry milk according to directions, for drinking purposes, but it wasn't long before it was discovered that dry milk had many other uses. It isn't known who discovered that dry milk, mixed with butter or oleomargarine, and whipped until fluffy, then sweetened and flavored, made a rich and satisfying pie filling. However, it wasn't long before all "kriegies" were having dry milk pies for dessert, and any person who drank his milk was considered extravagant.

Basically, all the recipes for pies were the same. The crust was made in one of two ways. One method was to grind the crackers from the Red Cross parcels and, using this as flour, bake in the normal manner. The other method was to soak the crackers overnight in milk, then spread the swelled crackers to cover the bottom of the pie tin and set in the sun to dry. The latter method was preferred because of the fuel shortage and limited baking space.

Blood Replacement Cited For Reducing War Deaths

"Adequate timely replacement of blood was an exceedingly important factor in the reduced mortality of battle casualties admitted to hospitals in World War II," according to Dr. Howard E. Snyder of Winfield, the American Medical Association. Dr. Snyder states that observation and laboratory investigations revealed that transfusions of whole blood rather than of plasma, the liquid portion of the blood, were needed for battle casualty patients suffer-ing from shock. "The advantages of adequate blood replacement with whole blood are maifold," states the author. "Mortality from shock is lowered. Prolonged adequate surgical intervention is possible when the replacement of blood is adequate. Operations which lasted three to five hours were not uncommon; in a number of instances they lasted even longer with satisfactory results. In the early days a few wounded persons lost their lives because surgical intervention was inadequate or was cut short due to the patient's poor condition and to the fact that gas gangrene later developed in an undebrided wound (one from which contaminated tis-

Revamped Communications Forty years ago Lee de Forest gave his invention, the three-element

sue had not been removed) or one

inadequately debrided. It reduces

morbidity. It permits early radical

reparative surgical operations."

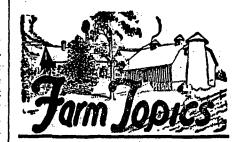

electronic tube, to the world. It completely changed the methods of "wireless" communication. It took the place of the arc and spark for generating electromagnetic waves, producing beautifully uniform waves which made possible the use of voice instead of the Morse code for communication. It substituted also for the variety of inefficient detectors and made use of the loudspeaker. possible, for it could receive, detect and amplify its own waves. Recognition extended to De Forest, in the form of financial reward of scholarly honors, has been very inadequate. Next to atomic energy the De Forest tube holds the record for the speed with which it was applied to an unnumbered array of purposes.

Sagging Mattresses

Sleeping continuously on a sagging mattress can cause a permanently curved spine which can be disfiguring and injurious to the general health as well as painful and cripping. Sometimes this results in one shoulder being higher than the other, in a tilted pelvic bone, vertebrae that are out of line or some other unbalanced bone shape. Only a level, resilient mattress can prevent this condition, for it properly supports the body, keeping the spine level throughout the long hours of sleep. While the sleep equipment of children, whose bones are more pliable, should be especially watched, damage can also be caused by adults sleeping on wornout mattresses or springs.

Delaware Flower

The peach blossom was adopted as the official floral emblem of the State of Delaware on May 9, 1895. Prior to the passage of this act there had been much sentiment among some of the citizens of the state who favored the golden rod as the state flower. As result of this sentiment agriculturalists and school children sent petitions to the legislature pointing out that Delaware had the reputation of being the "Peach State" since her or-chards contained more than 800,000 peach trees, which yielded a crop worth thousands of dollars. These reasons prompted adoption of the peach blossom as the official state

How Ohio Farmer Reclaims Pasture

Uses Quality Livestock In Marketing Hay Crop

Gail Heckley, a successful Lickhe used two tons of ground limestone and the equivalent of 500 pounds of 20 per cent superphosphate per acre. In 1944, he gave it

largely of broom sedge, poverty grass, some red top, some cinquefoil and briers, together with other weeds. Today he has a good stand

of blue-grass and white clover. The pasture carries four to five times as much livestock as it did before treatment.

Summing up the beneficial experiences Heckley and other Ohio farmers have had with well-managed pasture improvement programs, Dr. D. R. Dodd, Ohio State

university agronomist, declared:
"The application of adequate lime and fertilizer to what were formerly unsatisfactory permanent pasture areas and low yielding hay lands has taken the discouragement out of farming and put additional profit into the annual income. One very important item should not be over-looked. The high quality pasture and hay must be utilized by high quality livestock if maximum profits are to be obtained."

Newcastle Outbreaks

Continue to Increase New outbreaks of Newcastle disease, the serious chicken ailment which had appeared

in 21 states, must be detected promptly if further rapid spread is to be

The American Foundation for Animal Health has urged farmers to be constantly on the alert for signs of nerve disorders in their flocks, such as

trembling, throwing the head backward, or pulling the head down between the legs. Ruffled feathers, difficult breathing, or a condition that looks like a "cold" may also be danger signs.

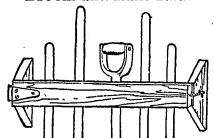

Because this is a virus disease, and the symptoms may often be obscure, the veterinarian generally has to resort to laboratory tests to be certain that the disease is pres-

New Brooder House

A stationary concrete brooder house and sanitary sun porch, as shown, provide maximum protection for chicks. Disease problems become greatly reduced when concrete sun porches are provided. The concrete is also a safeguard against fire in the brooder house.

Broom and Rake Rack

The life of brooms, hoes, rakes or pitchforks used around the barn will be materially increased if rack is made so that they may be hung on the wall. This rack needs only scrap lumber and a hinge. If necessary a leather hinge may be used.

Hexachlorocyclohexane

Proven New Insect Foe Locust, house cricket, cockroach, body louse, bedbug, aphid, cabbage worm, winter moth caterpillar, clothes moth, melon worm, southern army worm, beet webworm, pea weevil, flea beetle, mustard beetle, apple blossom weevil, bean weevil, granary weevil, hide beetle, mosquito, housefly, sheep tick, wasp, ant, flea, red mite and wood louse, all can be killed by gamma isomer of hexachlorocyclohexane.

Industry Provides Health Aids to Protect Employees

Improved drugs and methods are being used today in industrial medicine to assure the health and comfort of employees. One of the most modern innovations is Ford's mobile X-ray unit. Manned by four trained technicians, it is designed to X-ray the chests of employees at regular intervals. The X-ray unit is housed in a specially-built trailer and is moved from department to depart-

ment.

The company's industrial health laboratory has developed many protective skin creams for use by workers on jobs where possible irritations might arise. Last year 65,000 pounds of these creams were manufactured in the company's own pharmaceuing county, Ohio, farmer, has proven that proper soil treatment for pasture land will pay dividends. In the fall of 1938 and spring of 1939 creams and rigid hygienic investigation and methods have brought. lowest in the industry.

a second application of both lime under health supervision by the company's hospital staff. Besides the portable X-ray unit, the company has a rehabilitation program which assures that suitable employment will be provided for men recovering from illness and for those workers with disabilities or allergies. At the direction of the medical transfer department four inspectors tour the Rouge plant constantly seeking assignments for employees who have physical deficiencies. The use of penicillin and sulfa drugs has reduced the possibility of future disability through infection.

Urge Caution in the Use Of Electrical Equipment

Before using electrical equipment away from moisture.

Here are some other electrical

Don't use more than one piece of portable equipment on one outlet. Don't use metal sockets in farmstead wiring; use porcelain or other approved non-metallic ones.

Don't use pull-chain switches unless they contain an insulating link or

Don't overload your motors. Don't let the braid or insulation on wires get frayed; make repairs or replace cords at the first sign of danger.

Don't tamper with permanent wiring unless you have first cut off the current at the fuse box or master switch.

Avoid the use of more than one or two extension cords in any one outlet. More convenient outlets may

Beware of he high voltage power lines, don't touch them or allow any nigh equipment, loose wire or other item to contact them.

Never use electric wiring or equipment for playful experimenting or practical joking.

Washing Cloth Rugs

The small, light colored, cloth rugs that are so popular nowadays must be washed frequently to keep them bright and attractive. Vacuum or shake the rug vigorously before washing to remove surface dust. After soaking 10 to 15 minutes in lukewarm suds to loosen the soil, run in the washer for 4 to 6 minutes. Wash one rug at a time, unless rugs are the same color, and small enough not to overcrowd the machine. If necessary, use a second suds for extra dirty rugs. Rinse once in warm water, and twice in lukewarm. Follow the same rules for washing by hand, but save your hands by using a rubber plunger instead of scrubbing. Squeeze out the excess moisture from the rug, and if the surface is napped, give it a good shaking. For drying, place on parallel clothes lines so the circulating air can speed the process.

Young Fowl

Young, well-fattened turkeys are best for roasting. Marks of youth in a bird are a flexible cartilage on the rear end of the breast bone, tender skin, soft meat and soft, smooth feet. Turkeys in the roasting class are those five to nine months old. Other marks of quality include a well-rounded body, a well-fleshed breast, a good coating of fat under the skin, and few pin feathers. As for size, about three-fourths of a pound to one pound dressed weight should be allowed for each person to be served -dressed weight meaning the picked but undrawn bird. In the case of chickens, about one pound of dressed weight for each person to be served is a good average and in the case of a fat duck, about one and one-half pounds of dressed weight. The marks of youth and quality in a chicken or duck are much the same as in the turkey.

Tropical Island

Sumatra, one of the islands in the East Indies chain, is sparsely settled, with less than ten million people in an area larger than all New England, New York and Pennsylvania. Its tribesmen, especially in the mountains and remote interior, were slow to accept European conquest. This hot and humid land astride the equator is spread with vast forests and jungle, where tropical birds and monkeys chatter, and plants, like Jack's beanstalk, grow a foot or more a day. Still common are elephants and tigers; crocodiles, pythons, and cobras; the lumbering orang-utan and the agile gibbon.

Many More Fish In Idaho If you thought you found more underestimated is the cattle disease people at your favorite fishing hole called winter dysentery.

last year, you were right. The big-

game department.

Number of resident fishermen and hunters reached a total of 170,000, exceeding by nearly 6,000 the previous high mark registered in 1946. Figures prepared with the report showed the sale of 117,074 resident combination fishing and hunting licenses; 26,101 resident game licenses and 26,861 fishing licenses.

before. Fees were increased in 1947 and the tourist license was reduced from 10 days to half that time.

gation and methods have brought Non-resident big game hunters cases of skin inflammation to the boomed to an all-time high of 1263. A year ago the total was 923. Alien Ford employees continually are big game hunters remained firm. One license was issued in 1947 as was the case in 1946. The foreign visitor last year was from Norway. The year before it was a man from Cuba.

Less than half as many bird hunters from other states came to the Gem state last fall. The report showed the sale of 507 licenses compared with 1364 a year ago. Price of the bird license went up from \$10 to \$20.00.

Our Comment: Study the above igures and draw your own conclusions. Remember, a previous report on big game hunters showed that only about 30 percent bagged their game. Let's wake up before it is too late.

Take Care Of Those Animals

Don't forget that winter and early spring are the critical periods in the productive cycles of the farm ani-mals we depend on for meat and make sure that hands and feet are milks, according to a special report dry, and that you aren't standing from the American Veterinary Assn. on a damp spot. Keep the equipment In swine, for instance, the rations away from moisture. and lactation periods are perhaps the most important factor in the size and quality of the spring pig crop. In dairy animals, a critical period is when the cow is dry. During this time, she needs adequate rations to rebuild her body in prep-

aration for the new lactation period. Remember, too, that one of the

STATE REPORT SHOWS BEST BIRD HUNTING IN SOUTH

The average pheasant hunter in southern Idaho killed 10 birds during the season last tall, the fish and caught as early as the middle of counties where the average gunner February and every day the list gets went out six times in three weeks and bagged 13.5 pheasants. In the south-central counties of district No. 4, hunters were out five times for an average total bag of 9.4 birds, and in district No. 5, the eastern

fishermen are opening the season with nice co-operation from the big, husky fish.

The steelhead is a rainbow trout that has gone to sea and matured. The trout comes back to spawn. Some of them reach a weight of more than 20 pounds. Unlike the collections of the season and a daily bag limit of three cocks.

In northern Idaho where there is less pheasant habitat of high calibre the batting average on upland birds Fruit juices, bacon and eggs, toast was lower than it was in the south. and coffee for breakfast? Get the A checking station in the Worley "makin's" at Blewett's-Grocery Mar- area of Koontenai county recorded 1-adv. 168 hunters with 64 birds early in the 21-day season. Another station in Latah county counted 17 birds for 14 hunters. In Kootenai river valley 96 hunters were checked with

60 birds.

The studies of hunting success were part of a research program conducted by Maurice Lundy in southern Idaho and Michael Throckmorton in northern Idaho. The two biologists conducted investigations for the state as a Pittman-Robert-

Eighty-five per cent of the hunters said there were more birds in 1947 than the previous year. The remaining 15 per cent believed there were fewer. The comparison was made in southern Idaho districts. Similar data was not obtained in the north where a different method

of census was employed. Pheasants raised at game farms accounted for slightly less than five per cent of the total bag in southern Idaho, the report showed. The average for the three districts was 4.77 per cent. Farm pheasants were banded. As they were shot the hunters were asked to report the number to the department. In a heavily hunted portion of Owyhee county, where an investigation was made, 70 per cent of all the banded birds were killed during the first week of the season. That fact indicated that farm birds are more easily killed than birds

bred in the wild. Band returns over district No. 1, the Panhandle, were 3.2 per cent. The report said recovery of six to eight per cent may have been achieved. A similar percentage was reported for district No. 2, north-central Idaho, although only two of the 17 birds recorded one day at a station in Isaha. station in Latah county were banded. On the Worley check on the first week-end of the hunt, 33 per cent of the birds were found to be

HELLO, THERE, FOLKS:

About Spring Fever:

Between wind storms and showers that blue sky and sunshine really reminds us that spring is here! 'Tis the best time of the year by far! Yah, sure, ya betcha', even though it never fails to leave us all with severe cases of "spring fever!"

Speaking of "spring fever," a splendid remedy for this undeniable delightful malady, is a good pic-nic, complete with lots of tempting foods to satisfy all the numerous appetites.

When planning that plcnic, don't fail to include Potlatch Chief cottage cheese, which is packed in a carton very convenient for taking on picnics. Then to finish off the outdoor feast, make it Potlatch Chief ice cream, which will really make the day complete. Potlatch Chief ice cream comes in a variety of flavors, and is very economical

Pork.

yours now!
