## Urge Industrial Dental Care

To Reduce Absenteeism Rate Expansion of industrial dental health programs as a means of reducing worker absenteeism is urged by the Journal of the American Dental association. According to a new study of Tennessee war plants published in the Journal dental diseases were an important cause of industrial absenteeism during wartime.

Drs. Ruth R. Puffer and Carl L. Sebelius of the Tennessee department of public health reported that four Tennessee factories with 5,988 employees lost 1,255 employee-days in the year 1944-45 as a result of dental diseases. The annual absence rate due to diseases of the teeth and gums was 47.3 per 1,000 workers, Drs. Puffer and Sebelius

Women, they reported, had an absence rate of 64.5 per 1,000, almost twice that of the rate of 33 per 1,000 for men. The absence rate for Negro workers was recorded at,84 per 1,000. The average absence directly traced to dental diseases was for 4.4 days. Drs. Puffer and Sebelius declared that dental diseases may also have been the direct or indirect cause of other illnesses which caused absences and, in many cases, directly interfered with worker efficiency on the job.

### Little Arab Village Grows Into Big Near-East Port

From an Arab village, the big Palestinian port of Haifa has turned into a metropolis of wide streets and public buildings, of banks, schools, restaurants and recreation centers. Its modernistic department stores and apartment houses-with their. sweeping curves, glassed-in fronts, and severe straight lines—are typical of new architectural forms around the world.

In normal times the people of Haifa go briskly about their business at the docks, in the oil refineries and cement mills, the machine shops, cigarette factories, metal works and power plants. A pipe line more than 600 miles long brings petroleum from Iraq oil fields. Tankers are fed at the oil-jetty terminus, or by undersea hose that carries the vital fluid from the

beach to ships anchored offshore. Haifa's artificial harbor was created between 1929 and 1933 by dredging and by construction of huge stone breakwaters. Railways and highways link this eastern Mediterranean port with Egypt, Turkey and other Near East states. Airfields and seaplane landings are available.

### Watermelon Seed

For the best methods of saving and preparing watermelon seed, select the largest melons in your patch, mark them and let them rip en thoroughly for seed. When the melon is cut, separate the seed, how much nitrogen and organic wash and spread them out to dry in the air for a few hours. Then place cantaloupes, squash, cucumbers, pumpkins and cushaws. If you plant melons on a large scale, here's another method to follow in saving seed. Remove the flesh from the largest melons that have been saved and place in a barrel. Then fill the barrel with water. In from 48 to 72 hours, the flesh will go through a semi-souring process and come to the surface of the water. The meat may then be skimmed from the top and the seed removed from the bottom of the barrel, washed, dried and stored in cloth

## Canteloupe Nutritious

Tests at the Arizona experiment station show that canteloupes are so rich in vitamins A and C that one serving of the usual size furnishes more than the day's require-ments for both vitamins. Not their vitamin C is relatively stable. Tests at the New Mexico station showed that cut slices of cantaloupe kept in the refrigerator 2 those kept 18 to 21 hours lost only 13 per cent. The Arizona station found that small if any loss of C occurred during the time cantaloupe | For Fruit Trees is generally held after cutting.

## Bad Posture

Poor posture reduces the circulation locally and generally, perhaps serving a temporarily useful purpose during relaxation but, if continued, diminishing the metabolism and efficiency of the cells and tissues, inducing sluggishness and drowsiness, authorities say. Breathing is shallow, with reduced oxygen available for the tissues. The abdominal organs sag and perform poorly, often with discomfort, resulting in constipation and headache. The physical and mental attitude is one of depression and sluggishness. Backache, leg and foot pain and fatigue are frequent symptoms of bad posture, and consequently stooping, heavy work and participation in sports are frequently avoided. Lastly, clothes fit poorly when the posture is bad, and the general appearance of the individual is distasteful to others.

## Soybeans Will Hold **Own if Given Chance**

### **Industry Making Real Demands for Big Crop**

Since America's pioneer soybean processing plant began operations in 1922, soybeans have become a byword in agriculture and industry, ranking as the nation's fourth larg-

est cash farm crop.
Soybeans, when processed, enter largely into three fields of usesfarm, home and industry.

Farmers know soybeans as a crop which can be planted late, if neces-

Soybeans ready for the processor.

sary, and which brings comparatively high return per acre. They know soybeans, also, as a superlative source of protein concentrates for use in livestock and poultry rations.

Products made from soybeans go into hundreds of food items. Soybean oil is used in production of about 50 per cent of all shortenings. More than 40 per cent of all margarines are made from soybean oil. The soybean oil produced from nearly 1,500,000 acres is used in making margarines.

One of the subsidiary uses for soybeans is the field of medicine, where soybean oil is used as a carrier in capsule-packaging of vitamins.

The health-giving value of soy-beans long has been recognized by the farmers of health foods. These things are secondary to the farmer. Yield and profit per acre and use of soybean oilmeal as a feed have been the farmer's first consideration. If the production of soybean is to continue to increase, all uses of soybeans must be developed and ex-

## SHORTCHANGE THE SOIL

matter it produces, and how much of those materials is returned to the the seed in a cloth sack. This same procedure may be followed with sweet clover is out in the fall and sweet clover is out in the fall and removed from the field the resulting loss in nitrogen and organic matter reduces the yields of crops following in the rotation. When clover is not cut, those yields increase. The

above chart illustrates results of only are cantaloupes naturally rich crop rotation tests at the Carthage in vitamin C; they also hold this soil experiment field by University vitamin well, even after they are of Illinois agronomists. In a threecut and prepared for serving. This year rotation of corn, oats and makes them an exception to the wheat, sweet clover was seeded in general rule that the less acid a the wheat and plowed under for fruit contains, the more easily it corn the next spring. On one plot loses C. Cantaloupes are low in acid-the stubble sweet clover was cut ity compared to many fruits, yet in the fall and removed. On another plot the sweet clover was left uncut. Both plots were plowed the fol-lowing spring. The effect on yields of corn, oats and wheat following to 4 hours lost none of their C; on each plot is summarized above.

## New Type Spray Oil

A new superior type oil for use in dormant sprays for fruit trees has been developed by Geneva experiment station. The new type oils are said to be more effective and to be safer to use on fruit trees. It is estimated that 25 million gallons of oil are used annually throughout the world for horticultural sprays, sufficient to make about a billion gallons of dilute spray.

## New Machine Aids **Deep Fertilization**

A machine capable of placing fertilizers at plow-sole depth and covering as high as 30 acres a day has been developed by an Illinois farmer. Fertilizer placed at root depth in the soil or in the bottom of the plow furrow has been gaining advocates at a rapid pace. The present slow method of application has delayed its general application. It allows late season application after KENDRICK weather has become settled.

Mrs. Terry McKenney, secretary in the office of the North Idaho Scenic-Land Assn. office at Sandpoint, displays the new folder which tells the vacation advantages of the 10 north Idaho counties Stacked in front of her are envelopes containing this and other folders, being sent in response to inquiries from all over the nation. The stream of inquiries has been spurred by recent advertising in National Geographic, Time, Grade Teacher and Hunting & Fishing magazines

## Thousands Are Joining

Hundreds of thousands of adults are joining the Sunday School. In The Methodist Church alone over two million adults attend this teaching agency of the church.

Adults who join the Sunday School do so because they recognize their need for instruction and guidance in the Christian way of life. This expression of a need is a compliment to their intelligence—it shows an awareness of the greatest values found in life. This response indicates a deep concern for their own spiritual welfare and a feeling of responsibility for helping to make their church more effective in undergirding community life with Christian teaching. Adults who attend Sunday school realize the need for building homes upon faith in Jesus Christ and his teachings.

Those who attend Sunday School have a purpose in life that brings to them not only joy but also an abiding sense of faith. This satisfaction is grounded in the fact that they are discovering greater meaning in life and helping others to discover the joy that comes from unselfish service to the Master.

SOMETHING TO BUY OR SELL — USE A WANT AD.

The pitcher is the umpire, too. He'll call his own pitches—and what kind of a ball game will that be?

We have the same situation in our business. Government—which regulates the electric companies—is in competition with them!

Washington Water Power recognizes its obligation to supply continuous and dependable service. We have provided the Inland Empire with the best electric service, and rates have been lowered steadily.

Yet today government sets up politically managed electric agencies, and runs them by a different set of rules. They receive subsidies, pay little or no interest on money they borrow, pay no Federal taxes. If it can sell electricity on this basis, government can sell anything else the same way!

We believe that the people who work in our company, as well as the people who have invested their savings in it, deserve the same protection from political attack that most other people still enjoy. When the umpire plays, too, should he call his own pitches?

## The Washington Water Power Co.

A Self-Supporting, Tax-Paying Business Enterprise

Up to February 20, 1948, the 80th Congress, whose war veteran members comprise nearly 50 percent, passed 26 separate pieces of legislation beneficial to war veterans.

### Urge Caution in Use of

Owners of farm animals and domestic pets are advised to exercise at least "ordinary caution" when they use DDT to protect their animals against insects and parasites. Although federal regulations do not require that DDT be labeled "poison" but only with the word "caution," the American Foundation for Animal Health recommends a conservative policy in use of the new insecticide, especially around milk cows.

Because cattle and cats commonly lick themselves, they are probably more likely than other animals to suffer toxic effects from DDT sprayed or powdered on their bodies, the American foundation warns. Furthermore, it is known that DDT, when consumed in excess, is excreted in the milk of cows. It appears unlikely that a cow would absorb enough to poison the milk, but there is much yet to be learned on this potential hazard. In the meantime, the cautious use of DDT is recommended.

Farmers are advised to use DDT only in a water solution or powdered form when applying it direct to animals. Oily solutions of the insecticide are absorbed through the skin to a degree that might prove dangerous.

## Australia Supports 16 Times As Many Sheep as People

In Australia there are nearly 16 times as many sheep as people, Prof. J. F. Wilson of the University of California points out. Some 7½ million people live on the vast subcontinent, mostly along the sea coasts.

The Australian wool clip is the world's best, Wilson asserted. This is made possible because of the high and rigid standards imposed. The production of wool is of primary importance with lamb production secondary. Wilson saw one lot of 25 rams which averaged 31 pounds of wool and a thousand wethers whose fleece weights averaged 22 pounds.

Drouth and rabbits are two factors to contend with, Wilson said. A drouth may in one year cause the death of thousands of sheep. Rabbits are a perpetual menace. Five will eat as much as one sheep and 250,000 miles of rabbit-proof fence have been built.

### Urge Care in Deodorants

The careless use of non-perspirants or deodorants may do as much or more damage to garments than perspiration, according to textile and clothing specialists of the department of agriculture. When a good dress goes to pieces under the arm or changes color, even skillful patch ing may not make it wearable again. In using these chemicals women should be careful to follow directions on the label. Any chemical strong enough to stop perspiration may rot fabric or cause the dye to fade or change in color. Cotton and rayon fabrics especially are likely to be rotted by preparations that have an acid reaction.

## Range Land

Slightly more than half of the range land in the 11 far western states, including Nevada, is now in private ownership, according to a report on livestock production in relation to land use in irrigation made by the bureau of agricultural economics. About 10 per cent of the range land is in state and county ownership, and the remaining 40 per cent in federal ownership. Much of the range is still unfenced open country although more and more is being fenced. Grazing on most of the publicly owned range is now controlled by public agencies.

## British Union

For more than a thousand years history and geography have combined both to link and to separate England and Wales, notes the National Geographic society. Into the Welsh hills the early Britons fled before the Anglo-Saxon invasion. There, in the shelter of narrow, isolated valleys, these Celtic people maintained their independence until near the end of the 13th century, when Edward I of England brought about submission. It was at this time - as a result of Edward's naming his infant son the "Prince of Wales" - that the familiar title for England's heirs to the throne originated.

## Attack V. D.

Using a new publicity approach, Louisville public health officers aided by the U.S. Public Health Service have discovered 433 cases of venereal disease in the first 1,740 persons examined during the city's current anti-V.D. drive. The American Municipal association reports that the primary aim of the all-out campaign against V.D. is to teach people through all publicity media to recognize the first symptoms of venereal disease and to come to public clinics or their private physicians for treatment. In seven other cities where anti-V.D. drives have been waged recently, publicity encouraged all citizens to appear at clinics for blood tests. Although this approach is being used also in Louisville, more emphasis is being placed on clarifying V.D. symptoms. This accounts in great measure for the high V.D. rage among those tested in Louis-

# Mastitis Control Methods Important Bactericidal Agents Favorable Response

By W. J. DRYDEN

Mastitis, a communicable disease, can be measurably checked by identification of the carrier cow, followed by proper control and treatment.

A compound for treating chronic mastitis recently has been reported by Utah agricultural experiment station. It is colloidal silver oxide, 5 per cent, suspended in mineral

oil. This treatment is effective only against mastitis caused by

streptococci.

In injecting the compound, wash the udder with a chlorine solution. Milk the infected quarter dry and disinfect the end of the teat with tincture of iodine. Ten cc. of the compound is injected into the teat canal, and, by massaging, the liquid is pressed upward into the milk cistern and into the entire quarter. The milk should not be used for human consumption during and for 15 days after treatment.

Other recent compounds proven satisfactory for various types of mastitis include tyrothricin, sulfanilamide in oil and penicillin.

Concrete Water Tank

A concrete livestock watering tank is watertight, furnishing an ample supply of fresh water in readily accessible troughs. A concrete pavement six feet wide around the tank is highly desirable to provide a clean, mud-free platform for livestock to stand on.

That's your grandfather, son. He raised a record crop of soybeans back in 1943.

## Slant the Farrowing

Floors to Save Pigs

An ingenious lifesaver for little pigs—as simple as it is practical—is the result of an accident in Kentucky. The results were so fortunate that the U.S.D.A. is commending the method widely as a good way to increase efficiency in meat production. The new method is to slant the floor in farrowing houses, as the sow prefers to lie down on a sloping floor. The mother will select the high side, and save the pigs.

## Rocky Mountain Fever Now Found Throughout Country

Rocky Mountain spotted fever, a tick-borne disease, which is often severe and sometimes fatal, is geographically scattered over 47 states. Writing in the Journal of the American Medical association, Dr. Samuel F. Ravenel of Greensboro, N. C., suggests that treatment with para-aminobenzoic acid, one of the vitamin B complex group, will eliminate practically all deaths from this fearful disease.

Treatment of five patients with this drug, in combination with standard methods, produced "rapid" and "brilliant" results, states the author.

The rickettsias, bacteria-like parasites, responsible for this diseased on the respond to sulfonamide compounds. The author states that they are not only useless but probably harmful in treatment of this disease. Moreover, he adds, "although rickettsias are reported to be sensitive to penicillin, this agent has proved useless in treatment of Booky Mountain spotted force."

Rocky Mountain spotted fever."
Reviewing the status of the disease today, the author states: "The name Rocky Mountain spotted fever is now obviously geographically incorrect, since this desease has been found in 47 of the 48 states. Tenyears ago 70 per cent of the cases occurred in the Mountain and Pacific states, while 87 per cent were reported from the Central and Eastern states in 1945. Its incidence and importance to public health in the United States are shown by the occurrence of 400 to 560 cases with 90 to 137 deaths each year during the past decade."

## Experiments Show Salt Is

Common Vegetable Food

Vegetables have to eat just like human beings who eat vegetables. Vegetables, however, are not vegetarians; they are, if a name may be coined for them, mineralarians. Unlike vegetarians, some vegetables like salt and plenty of it to season their bill of fare, but others like only minimum amounts.

Investigation of fertilizers at New York state agricultural experiment station at Geneva have revealed that table beets have a great fondness for salt. In the first experiment ordinary table salt was substituted for one-fourth of the potash in the fertilizer. The yield an acre improved so much that the amount of salt was increased until the maximum yield was obtained, when seven times more salt than potash was supplied.

Soy beans will take up to onethird of the maximum amount of salt taken by beets and show improved yields, but they must have their full amount of potash in order to do so. If the amount of potash in their diet is reduced then they are unable to utilize salt.

## Stone Age Paintings Copies of Australian cave paint-

ings, the originals of which are believed to date from Australia's stone age, which lasted until the white man arrived, recently were put on exhibit at Australia house in London. The originals have been annually retouched through the centuries by the Australian aborigines, with the use of red and yellow ochre and pipe clay white. The aborigines believe the pictures originally were made by the spirits of rain and fertility by casting their shadows upon the rocks of the cave. It was the practice before each rainy season for the aborigines to approach and touch the pictures—following which: act of reverence the rains came. The pictures, which were found in the Kimberley district of northwestern Australia included "white, mouthless faces," some of which "appeared to be swimming in seas of little kangaroos, ducks, lilies and

## Develop New 'Hooks'

Development of a new artificial hand for amputees that is far superior, mechanically and cosmetically, to anything yet perfected has been announced by the army prosthetic research laboratory.

The new hand operating more effectively than the present "hook" is life-like in appearance because of a plastic glove that is seamless, flexible and waterproof. It weighs 12 ounces.

Major Gen. Norman T. Kirk, surgeon general of the army, in announcing the new device emphasized that the hand is not on the market now and will not be until industry gets them into production.

One of the features of the device, it was pointed out, is the psychological effect it will have on veterans by giving a boost to their morale through the life-like appearance of the glove.

Key To Cookery
Temperature is one of the keys

to successful egg cookery. For some purposes eggs will perform better if they are cold; for others they should be at room temperature. When it comes to separating raw whites from yolks, eggs should be neither too warm nor too cold. An egg just out of the refrigerator is difficult to separate because the white clings to both shell and yolk. On the other hand, at a temperature of 75 degrees or more the yolk flattens out and breaks more easily. The happy medium, then, is reached by keeping the egg at room temperature about half an hour before separating.

Bids must be placed with the Schwartz, will climax the three Clerk of said District not later than weeks of rehearsals by these groups. Mr. O'Connor comes to the summer The Board reserves the right to camp from Klamath Falls, Oregon, eject any and all bids.

Dated at Kendrick, Idaho, this 9th day of April. 1948.

A. O. KANIKKEBERG.

A. O. KANIKKEBERG. California, and Mr. Logan is a member of the university's resident music

faculty.

At least one faculty recital and two or more student recitals will be given during the camp. Some of programs will be broadcast

from the campus. The latter part of each day will be given over to rest and recreation periods, with camp students making full use of the university's facilities for various sports. A camp-fire sing will be held in the arbor-etum, and various other social events are on the schedule.

Cottontail Rabbits Protected May 1 was a red-letter day for cottontail rabbits of Idaho. Beginning with that date the brush bunnies all over the state will have a season of protection from hunters. Shooting dates will be confined to the period from October 1 to Jan-

uary 1.
Up to the present time all sorts of rabbits in Idaho have been legal game the entire year. No bag limit was specified. When the season begins next fall the bag and posses-Recognition was granted the

sion limit on cottontails will be four species by the fish and game commission at its April meeting, at FOR SALE — '36 Ford coupe; good which time dates for hunting big condition and tires. Price \$450.00. game and trapping fur were dewhich time dates for hunting big termined. Protection for cottontails was recommended by conservation

officers. The little rabbits are found in separator, \$10; bed couch and mat- many parts of Idaho. Over the nation tress, \$20; doz. or more milk bot- as a whole, more pounds of rabbits tles; 2 cream cans, 2-gal. and 3- are harvested and utilized by sports-

20-1x have no effect on the status of jackrabbits, the game department said. The jackrabbit, common in the sage-20-1x brush deserts of southern Idaho and elsewhere, is still classed as a predator, and may be killed the year around. There is no season or bag limit on him.

The "snowshoe" rabbit found in the woods of northern Idaho, was not mentioned. It is not known whether or not it is protected.

To Issue Commorative Stamp The postoffice department will issue a three-cent stamp through the Washington, D. C., postoffice on May 28, in honor of the four chaplains who sacrificed their lives in the sinking of the S. S. Dorchester.

For benefit of stamp collectors the stamp will be available at the Philathelic Agency, P. O. Dept., Washington 25, D. C., after May 28.

More than half a century elapsed between the time the first white men, Lewis and Clark, set foot upon Idaho, and that territory had any form of government. And, the state of Idaho is now only 58 years old!

Fresh frozen vegetables of all kinds are to be found in the display 20-3x too. Try them.
