WHEAT MARKETS AVERAGE SLIGHTLY LOWER FOR WEEK

Domestic wheat markets averaged slightly lower during the past week, influenced by continued heavy martalk with members of the family and ketings from the new winter wheat crop and generally favorable spring conditions, according to reports to the Federal-State Market News service. Markets appeared particularly unsettled early in the week, reflecting declines in securities and trade reaction to proposals for reinstate-ment of price controls. However, with wheat quotations at a number of points somewhat below government loan levels, growers were show-ing a strong holding tendency and additional large purchases by the C. C. C. made for a firmer situation toward the close of the week. Prices recovered somewhat toward the close of the week, but were still

below those of the previous period. Winter wheat harvesting is nearly completed as far north as the Ohio valley and three-fourths done in Missouri and Iowa, and about completed in Kansas, except for late fields. Reports indicate that yields continue to exceed general earlier expectations. The condition and progress of spring wheat in the main belt are generally good. However, there are some poor spots in the north central area due to previous dryness. In southern Minnesota and in much of eastern South Dakota spring wheat was sufficiently near maturity to preclude the possibility of rust development. In North Dakota only a trace of stem rust has been found. There is abundant moisture in most of the northern part of the spring wheat area and with the wheat mostly two or three weeks from harvest there is only a slight possibility that stem rust may

increase. General rains over the Prairie provinces around the middle of July improved the Canadian wheat crop sible care, but refused to respond to outlook. Prospects in Manitoba now are reported to be very favorable while in Saskatchewan favorable conditions are reported in the eastern, east central and north central southern Idaho to visit with friends and three sisters: Archie, overseas districts. Prospects ranged from poor to fair elsewhere in Saskatchewan except for local areas. Prospects are fair to good in most districts of Alberta.

The European wheat crop of 1948 is tentatively set at 1,450 million ma, at home. Six nieces and eight bushels, compared with 1,015 million bushels in 1947 and an average of Mr. Candler was a man who made 1,588 million bushels in the pre-war friends easily, and held them. He laways had a smile and cheerful all the important countries. Rye word for all, and it will be with production is forecast at 600 million Many of the children on this ridge great regret that this community bushels, which is about 20 percent Funeral services were conducted at last year but is still 20 percent less Mr. and Mrs. Harry Langdon and the Community church with the Rev. than the average for 1935-39. The Vicky Ann spent Friday at the Dr. J. H. Coulter bringing the mes-wheat crop of 275 million bushels in sage. Music was furnished by Mrs. France compares with 150 million D. A. A Lesson In Living

A lesson on truly gracious living may be learned quickly and easily through a visit to the home of Mrs. Anna Marie Oslund, chosen Idaho's mother. Model Mother of 1948.

home, nestled among the evergreens, six miles east of Troy, one quickly gets the feel of peace and serenity.

Children of Pasco, Wash., spent the week-end here in the home of his parents, Mr. and Mrs. Louis Alexander and family. Here in the mountains is the home where Anna Marie Oslund reared her and Bud Alexander families were family, while teaching in the Troy huckleberrying in the Three Bear family, while teaching in the Troy school for a supplemental income. A prosperous, thriving farm, abundant with berries, live stock, gardens and the smell of new-mown hay — "Oh, yes," she says, "there was work to do, but I loved it. Just so I could manage to give my children the things they should have. I wanted for them fun — skating swimming. for them, fun — skating, swimming, horseback riding, and to be good marksmen, and above all an edu-

To say she has achieved all this and more too is an understatement. For there is no way of measuring

the joy and goodness she has brought into the lives of others.
Entering her front door, one steps into a big, beautiful room, sealed with knotty pine and polished to a place. The overhead beamed cailing gloss. The overhead beamed ceiling and rustic fireplace add to the charm of the room and you realize that here is a treasurehouse of cherished memories.

Mrs. Oslund, in her charming and modest manner confides that she is no speaker, but loves to talk about children — her children — and others — and this business of being a

On week-days her home is the usual ranch home, for there is work to be done, but on Sunday afternoons it abounds with guests, and Mrs. Oslund is the perfect hostess, dispensing hospitality and fine home-made strawberry shortcake and coffee to her callers — either within the house itself or on the grassy patio at the side of her nome.

To attempt to show the labor that Mrs. Oslund, widow, put into the making of this farm and home, and the raising of her own family as well as two foster sons would be an impossibility — so again we say: "A visit will show why she was chosen the Idaho Model Mother of 1948."

friends and relatives in this area. Helen Johns, ArLene Holmes, Clinton Parks and Maribel Schupfer of Juliaetta; Marilyn Schupfer of Juliaetta; Marilyn Schupfer of Kendrick and Gail Clark of Lapwai drove to Wallowa Lake, Oregon, Sunday on a picnic, following the famous Chief Joseph Trail.

Flies To New York

Mrs. Oscar Slind received word this week that her brother, Capt. Lloyd Leland of the A. A. F. re-serve had flown a B-29 from Spokane scrubbing with stiff brooms and to New York, where he will fly with the mass of B-29s in the Air Review before President Truman. He will probably be away two or three weeks.

Sunday School Pienic Monday afternoon the children in he Primary department of the Community church were treated to a party in the park by their teachers. Games were played and refreshments served. Hostesses were the Mesdames Ben Cook, Bob Magnuson, Kenneth Brocke, Bonnie Easterbrook and W. L. McCreary.

Bacteriological Warfare Termed Threat to Future

A greater threat to the future is posed by bacteriological warfare than by atomic warfare, according to Dr. Frank Holtman, head of University of Tennessee bacteriological department.

While an atomic bombing might kill and maim a goodly portion of the population in a city of 150,000, as well as destroy the major portion of the city itself," said Holtman, bacteriological warfare might very easily wipe out the entire population within a week.

"Such warfare would leave buildings intact, making that one primary reason the enemy would use such a weapon. Then industries, buildings, military installations and supplies would be almost immediately available for enemy use.

"It used to be said that bacterio-

logical warfare was too risky for a nation to use because it was uncontrollable but that is no longer the case. More is being learned all the time about the control of this weapon. In considering reports that Russia is well prepared in bacteriological warfare, I don't think we need take a back seat. However, the developments we have are definitely military secrets and cannot be divulged."

Cattle Grubs May Attack Horses, Veterinarian Finds

The heel fly or grub usually is considered only as a parasite of cattle, but new veterinary reports show that this trouble-maker also may infest horses.

Heel flies unable to find a cow sometimes will deposit their eggs on a horse. These eggs, usually laid in the hairs just above the hoof, hatch into larvae within a few days, bore into the skin and months later they emerge as grubs by way of the horse's back, just as they do in cattle. Horses so affected cannot be ridden, as pressure from the saddle crushes the grubs and causes severe inflammation.

"Parasitism of horses by cattle grubs is not common and probably is accidental," states a bulletin issued by veterinary authorities, "but it is nevertheless a threat that should be recognized by horse own-

Grubs found emerging from the skin should be removed, preferably by using a suction cup. Grubs also may be removed by gentle pressure, but care must be taken not to crush

Elimination of grubs in cattle by spraying them with rotenone preparations also serves to prevent the spread of these parasites to horses.

Malayan Federation

The Federation of Malaya, now rtually independent of Eritain, is a country whose wealth is deep-set in tin and rubber. Before the war, British Malaya produced nearly half the world's rubber, mined almost two-fifths of its tin, and was wealthier than the rest of the British colonies put together. Today, rubber production in the southeast Asia peninsula is breaking prewar records, but tin shipments are down. The new Malayan federation, launched as a going concern by the British governor at Kuala Lumpur, includes all British Malay peninsula possessions and adjacent islands except Singapore, which will remain a crown colony. The bulk of the federation is in nine variously developed native sultanates - the small protectorates that fell one by one as the Japs swept through the jungles to Singapore in 1942.

Abandon Search for Flyers After more than two years of

intensive search in the wild jungles of India and Burma for the bodies of fliers and other American military personnel who perished there, the American graves registration service has abandoned further search. Many of the 1,636 men who failed to arrive at their destinations were air force crews believed to have crashed on inaccessible mountain peaks or in jungles seldom traversed by humans. The search was abandoned not only because of its futility but to prevent army personnel from subjecting themselves again to perilous missions which had previously failed.

Refrigerants

Chief refrigerants, other than ice, used for domestic refrigeration, are ammonia, dichlorodifluoromethane (Freon-12), dichlorotettrofluoroethane (Freon-114) ethyl chloride, methyl chloride and sulphur dioxide. The refrigerant, which is a necessary part of the refrigeration unit, may be considered safe as long as it remains in its proper place within the refrigerating system. Leaks are not common, but they sometimes occur. Most persons are familiar with the odor of ammonia and that of sulphur dioxide which is produced by sulphur matches. A small amount of either causes only temporary discomfort; however, the amount in a refrigerating system is large enough to cause serious injury. In the case of leakage of the refrigerant, food which has been exposed is probably fit for use unless spoilage is indicated by appearance, odor or taste. If there is doubt, it is safest to throw it away.

MICKIE SAYS-

10 SEND YOU THIS PAPER TH' BOSS MUST PAY BILLS EV'RY DAY ~ SO YOU SHOULD'N'T MIND IF HE ASKS YOU TO PAY HIS BILL EV'RY YEAR!

Comment On Employees

The federal government allows employes in general 26 working days or approximately five weeks a year for vacation, while the state of Ida-ho allows its employes two weeks, or 11 working days.

In sick leave allowance federal nually with the right to accumulate sick leave to a total of 90 days. Most appointive employes in Idaho are allowed two weeks a year sick leave. Under the merit system in Idaho, however, 15 annual days sick leave is granted and may be accumulated up to 45 days, according to Thomas H. Charrey of the merit system council. In extreme cases, especially where old employes are concerned, an additional 15 days may be granted and charged to the year ahead, which would make possible a 60 days maximum.

A recent report of the U. S. senate committee on appropriations indicates extensive abuse of the right held by federal employes to accumulate sick leave to a total of cruiting station.

About Army Enlistments

Under the new Selective Service law, men between the ages of 19 and 25 may enlist immediately in the army for a period of 21 months, it is announced by Lt. Col. Hans W. Helm, commanding officer of the Washington recruiting district in Setatle. These short-term enlistments must be followed by transfer to the Enlisted Reserve Corps for five years, enlistment in an organized reserve unit for three years, or an additional year in the regular army. Enlistments in the regular army are still open for two to six years, according to Lt. Col. Holm. Further information can be secured from any U. S. army and U. S. air force recruiting station. employes are allowed 15 days an-

90 days, and vacation leave of Boise — Expense of long annual vacations and generous sick leaves allowed federal employes, as compared to those of the state of Idaho, is extremely coefly to townstand. ho, is extremely costly to taxpayers, according to an analysis prepared by the Idaho State Chamber of Commerce used sick-leave privileges for such purposes as painting their homes, or attending social functions. The federal government is now obligated to pay 44,561,000 days of vacation accumulation and 54,542,000 days of sick-leave accumulation, a potential obligation of \$1,100,000,000, according to the senate committee. ing to the senate committee.

About Army Enlistments

NOTICE IS HEREBY GIVEN, that on TUESDAY, AUGUST 10, 1948, at the regular polling place in the various election precincts of the County of Latah, State of Idaho, a primary election will be held for the nomination of United States Senator, Representatives in Congress, First Congressional District, State Senator, State Representatives, and for County Officers, and for the election of Precinct Committeemen.

The polls in the several election precincts on the day of said Nominating Election shall be open from twelve (12) o'clock noon until eight (8) o'clock P. M.

Notice Of Nominating Election

The names and addresses of all persons for whom nomination papers have been filed and who are to be voted for, with the party designated and title of each officer, are as follows, to-wit:

KENDRICK BEAN GROWERS ASS'N KENDRICK, IDAHO

How To Increase Milk Flow H. J. Snyder of the University of Illinois, has done a bit of experimenting on pasture fertilizing and tells of some records kept after putting ammonium nitrate on brome grass pasture.

Putting ammonium nitrate on at the rate of 100 pounds per acre one farmer figured that the increase in milk production amounted to 127 pounds a day from his herd of 27 cows. The ammonium nitrate cost \$30.00 and had more than paid for itself in a week's time.

Tests made on the brome showed that the grass which had ammonium nitrate contained 11.6 per cent protein, while the percentage was 7.6 per cent where no nitrogen was

Another farmer put the same fertilizer on his pasture at the rate of 300 pounds to the acre. The am-monium nitrate was applied May 10, and by June 20 the yield of hay was 5,560 pounds an acre as compared to only 2,670 pounds on a field which had no nitrate.

The protein content of the grass jumped from 7.9 per cent to 14.7 per cent on the last mentioned fertilized field. Snider concludes that there is no advantage in putting on large amounts and running up the cost of fertilizing your pasture. An amount around 200 pounds per acre or even below this are very effective and may not be too costly.

Mr. Snider said: "I was especially interested in seeing those figures on the protein content of the forage after nitrates were applied. I know that some have figured that nitrogen did not boost the percentage of protein, but due to more vigorous growth there was just more protein per acre, Apparently this isn't true."

Mr. Snider further states that right now is the time to consider the firtilizing of pastures and fields that need it. It has been thoroughly proven that the proper use of fertilizer we can boost crop production. He suggests that if in doubt as

fertilizer needed for any soil, your county agent or the Soil Conservaion Service can be of assistance. Safety On Farms Important "Make Safety Our No. 1 Crop." That's the 1948 slogan of 4-H Club

to the proper kind and amount of

boys and girls throughout the nation to help reduce the annual toll of 18,000 deaths and 1,375,000 injured on farm annually, due to accidents.

Many members are taking an active part in the National 4-H Club safety awards program, which is being continued in Idaho under the direction of the Extension Service

for the sixth consecutive year. Among the members activities to safeguard their families against accidents are removing or correcting hazards on their farms. Their safety measures include nailing down loose boards in homes and barns; covering open wells and sunken water tanks; properly storing tools; exercising care in operating machinery on farms and automobiles and truck on highways, to mention only a few.

Many incentives and awards are

Seagoing Bottle Contains Message for Royal Couple

Lt. Philip Mountbatten, whose marriage to Britain's Princess Elizabeth was the talk of the world, was the recipient of a strange message, which came to him by way of a tightly-corked bottle which had spent some time in the sea. This bottle was picked up on the shore at Land's End, on the westerly tip of England. It was addressed to "Lt. Philip Mountbatten, Buckingham Palace."

The message in the bottle stated that when the Greek steamer, Arisidis, was 28 miles west of Bishop's rock, America-bound, the bottle had been dropped over the side by the radio operator, J. S. Papageorge. The message which was in the bottle follows:

"Although there are three modern wireless transmitters in my possession, I just thought it would be nice and more interesting in this strange way to send you my heartiest wishes for a long and very happy life to you both. God bless you two."

The bottle was sent to Lieutenant Mountbatten and his bride. When the Aristidis arrived in Norfolk, Va., the radio officer learned that his message had reached the royal couple.

Timely Spraying or Dusting Eliminates Plant Disease

Maintenance of healthy plants requires a knowledge of the habits and nature of plant-killing insects and constant effort towards their eradication.

Two main types of insects threaten the health of plants chewers and suckers. Different treatment is required by both.

Chewing insects eat and digest their food so they are killed with stomach poisons. Complete coverage of the leaf surface with poison is necessary. Sucking pests penetrate the plant tissues and suck the juices. Material applied to the leaf surface affects these but little. Best control can be gained by hitting them with a contact spray, or with a dust designed to choke or smother.

For elimination of plant diseases, the best procedure is to spray or dust before or immediately after a rain. This is to take advantage of the nature of diseases. They need moisture for infestation and dispersal and are much more troublesome in wet than in dry weather. Sprays should not be allowed to stand even for a short time before

Home Freezers Popular

Grandma's pickle crocks and blue glass jars of well cooked food have food with "just picked" flavors. And the long days of steaming kettles, sterilized jars and sealing wax also have given way to a simple morning's work of packing cleaned food into paper cartons that stack neatly into freezing compartments. It is best to pare, pit and cut fruits or vegetables into the sizes most generally used so that they will occupy the least space and also be ready for instant use without further handling. Meats should be boned if possible, with excess fats and unusable parts cut away.

17 Billion to Ride Free

More than 17 billion passengers will travel an estimated 241 million miles in the United States in 1948 without paying a cent for trans-portation. Their travel will be up and down, confined to trips by elevator in the nation's office and residential buildings. With 5,000 newly installed lifts going into service, the country's elevator census soon will reach a record of 400,-000 units. Trains carry about 79,273,000; street cars, nine billion; busses, 10,045,387,000, subways four billion, and airplanes, 13 million. Some elevator designers are looking forward to installation of automatic speaking devices that will call off floor numbers and merchandise.

Alphabetical Jap Bureaus

Japan is catching on to the alphabet idea, for bureaucrats. In fact, Japan appears to have as many alphabetical agencies as the New Deal had in its most flourishing days. The allied headquarters telephone book devotes two entire pages to "organization and section abbreviations." These run from AG (adjutant general's office) to WDID (war department intelligence division). The idea is quite popular with the Japs, who have set up such agencies as ESB (economic stabilization board) HCLC (holding companies liquidation commission) and other alphabetical arrangements, much to the confusion of the now docile Japanese citizen.

Looking Forward With Radio

There are now 1,969 AM stations either on the air or being built, with applications for many more. As the number increases, there is a corresponding increase in the amount of interference between stations, and the areas reached by their programs is reduced accordingly. Of the 1,063 FM stations authorized, more than 400 are on the air, and new ones are starting operation at the rate of 50 per month, with the total expected to reach 1,000 by the end of 1948.

British Wreckers Speeded In Search for Hidden Coin

North Shields, Northumberland, England, is a seafaring town which recently was the scene of an intensive search for buried treasure. In pursuance of that search, workingmen demolished ancient Chirton cottage.

Some 99 guineas (worth \$3,780) were reported hidden under a "young sycamore tree" in the rear of the house. Nor was this all legend. For the workmen found a piece of parchment, dated May 22, 1653, under the basement stairs which described the treasure and the tree behind the house. There was even a sketch attached to the document which purported to show the position of the buried treasure.

The main trouble was, things have changed in the last 294 years and no one seemed to know which tree was referred to or whether it had been cut down.

The document, written in red ink and signed by one John Dow told of a day of terror and imprison-ment. "My master," it read, "bade 1..e hide some 900 guineas in safety until his return. This I have done and they are hid beneath the young sycamore to the rear of the house. ... I have drawn a crude map showing the position of the money."

Freedom Garden Program Sets High Goals for 1948

National leaders have set a goal of 20 million freedom gardens for 1948, pointing out that they will encourage world friendship and will make all men partners in the common struggle for peace, freedom and enough to eat.

The national garden program calls for 14 million town and suburban gardens large enough to produce good supplies of vegetables; six million bigger and better farm gardens; perennial vegetables and fruits wherever space and growing conditions permit, and farm, rural suburban and town families to can or otherwise preserve adequate supplies of vegetables and fruits, buying these in the open markets whenever necessary.

The produce from 20 million home gardens can take the place of, or supplement, many foods vitally needed for export. A home garden also will aid the family budget and assure the family of an adequate, well-balanced diet, it is pointed out.

Mount Vernon Is Mecca For Millions of Visitors

The 500-acre estate of Mount Vernon is one of America's swankiest historic spots — a spot which has been replaced pretty generally by been visited by millions of people and all of the II. S. Presidents in the past 90 years.

In the 1850's the estate was placed on the market for \$200,000. Both the state of Virginia and the United States government turned the offer

Determined to save the home of the "father of his country" for posterity, Miss Ann Pamela Cunningham of South Carolina organized the Mount Vernon Ladies association and called upon the women of the nation to help her. The money was raised, Mount Vernon was purchased and has been maintained ever since by this association. Miss Cunningham served as regent of the association from 1853 to 1874.

For the past 18 years Charles C. Wall has been superintendent of the estate, which has 75 permanent employees.

Mount Vernon was visited many times by Franklin D. Roosevelt while he was president. Winston Churchill also has paid it a visit. President Theodore Roosevelt rode out on horseback. President Truman has visited this national shrine many times. He usually brings his

family and some friends. Picture-taking is permitted, and people take pictures of the famous spot by the thousands.

GI's Train "On the Job"

Many veterans are learning improved farming practices under the G.I. bill "on the farm" training program. The farmer-vet is required to put in a minimum of 200 hours a year of class work. Four hours a month are taken up with trainer's visit to the farm, where very specific questions are answered in the field and in the barn. Among the many phases of agriculture that are covered by the course are dairy herd management, herd production records, dairy feeding rations, livestock judging and selection, farm machinery repair, farm records and accounting, and weed and insect control.

Helicopter for Farmers

Agricultural use of the helicopter is gaining from year to year. Since delivery of the first duster, May 8, 1947, to the National Cranberry association, tens of thousands of acres of field crops and orchards have been dusted and sprayed by more than 30 customer-operated, commercially licensed helicopters during more than 2,100 hours of f'ight. It was not until 1939 that America's first practicable helicopter made its initial flight. During the summer of 1946 a helicopter was shipped to Washington where during a three-month period, it dusted 10 different crops, ranging from apples to hops.

Hog Mange Causes Average Loss of \$2 New Insecticide Proves **Effective in Control**

Common mange of hogs is another widespread disease that has yielded to the results of animal health research. The U.S. department of agriculture says the average losses from mange probably amount to \$2 a head. This figure covers the loss from stunted growth, delay in fattening, occasional deaths and dockage when mangy hogs are mar-

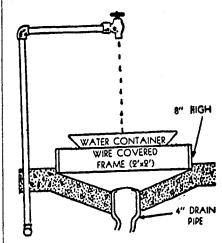

The effective weapon against mange is benzene hexachloride, frequently referred to as "666." In Nebraska tests this newly-discovered insecticide was so effective it eradicated mange with one treatment. Not only did it eradicate mange - it also got rid of lice. This makes the old mange treatments obsolete.

In the Nebraska tests, crude benzene hexachloride (a wettable powder) was mixed with water (10 pounds powder in 100 gallons) and sprayed on the hogs.

One objectionable feature of the crude benzene hexachloride is its terrific odor. This odor is not present to any marked degree in commercial hog oils prepared by use of \boldsymbol{a} solvent which takes the active ingredient (the gamma isomer) out of the crude benezene hexachloride and leaves behind the ineffective ingredients—the ones that have the disagreeable odor.

Herds and Flocks

Pond water piped to farm buildings for livestock can be filtered by building a solid housing of soft brick (laid in cement) over the end of the pipe in the bottom of the pond.

Water filters through the pores of the brick.

First treatment for cattle grubs should be made early in winter, as soon as the tell-tale bumps appear on the backs of animals. Several treatments a month apart will be necessary. Use a cattle grub dust containing 11/2 per cent rotenone.

The current shortage of feed makes it important to do continuous culling in the laying house.

Dairy cows lose a lot of energy pulling through heavy mud in the barn lots. Lost energy means less milk. Paved lots that take cows out of the mud soon pay for them-

Mow and Spray in One Operation Pays Well

Prof. B. B. Robb of Cornell university demonstrates a mow and weed gadget for applying 2,4-D to lawns. A regular garden sprayer is filled with 2,4-D mixture and pumped up ready for use. Fastened to the lawn mower the sprayer carries a two nozzle boom ahead of the blades and contains enough mixture to cover at least half an acre of lawn.

Midwest Barley Growers To Compete in Contest

A \$30,000 contest which stresses the importance of certified seed, early planting, seed treatment, use of commercial fertilizer and timely and careful harvesting in growing barley as a cash grain crop that under proved methods of production commands a premium price is announced by the Midwest Barley Improvement association, Milwaukee. The prizes are offered to farmers in seven Midwest states.

Ownership of Faulklands Disputed by Three Nation

Possession of the Faulkland is lands has been in dispute by Britain Chile and Argentina. This disma archipelago was unheard of for a hundred years after Columbus discovered America. John Davis and Sir Richard Hawkins touched there. but no British landings were made until 1690. Thereafter sovereignty fluctuated between Britain, France and Spain. Argentina did not develop an interest in the islands until 1829, when she landed a few soldiers and colonists, maintaining them there until Britain expelled them in 1833.

The islands are bleak fragments of rock scattered off the eastern tip of South America. In theory they protected the Cape Horn passage and guarded the southern entrance to the Atlantic. However, in World War I they proved their overwhelming strategic importance.

In the Battle of Coronel, off Chile, Admiral von Spee had destroyed a British squadron under Admiral Craddock, dispatched to drive him from the Pacific. This seemed to open a way into the Atlantic and von Spee apparently determined to seize the Faulklands. Unfortunately for him, he arrived a day too late, just as two great British battle cruisers, the Inflexible and Invincible, sent by the admiralty to intercept him, had finished coaling. The ensuing battle was one-sided. Outmatched in speed and range, von Spee fought until his flagship went caped. This action gave the British full command of the outer seas four months after the war started.

Home Dry Cleaning of Rugs And Garments Is Hazardous

The three terms, gasoline, benzine and naphtha, are applied to hydrocarbon liquids that from a fire and explosion standpoint differs only slightly. At low temperatures they 17.60 give off highly combustible vapors 88.20 or gases which form mixtures with air that are decidedly explosive. They are the most hazardous flammable liquids used about the home.

Washing garments, rugs or other articles by immersing them in gasoline never should be done in the house under any circumstances because the gases or vapors may be readily ignited by a nearby stove or other source of ignition and because the friction of the garments being cleaned may produce a static spark sufficient to ignite the vapors or gases with serious, sometimes fatal, results.

If gasoline is used for such cleandrick, Idaho, for one school bus, and in a place where fresh air is circulating freely. It is less hazardous to use a nonflammable cleaning liquid such as carbon tetrachloride or, better yet, to send the articles to a drycleaning establishment where the hazards of any cleaning are understood and where they are avoided by use of special apparatus.

Amino Acids

The amino acids are destined to play an important role in building new tissue and in speeding recovery for the patient in many types of surgery. They are chemical compounds which are capable of combining to form complex proteins. In human and animal digestion proteins are broken down into their amino acid constituents and carried unchanged by the blood to build tissue. Surpluses are converted into by-products by the liver to be used as a source of energy. The story of their discovery spreads over a century of persistent research by chemists and doctors in several nations. Recent work with both man and animal has shown that there are eight amino acids essential to men and 10 to most animals. Histidine, for example, is indispensate to the rat, as is glycine to the chick, but man thrives without either, since the human body can synthesize

Why Clothes Get Dirty

Textile scientists at the institute of textile technology in Charlottesville, Va., are trying to discover sound, scientific reasons why clothes get dirty. When these reasons have been found, better soaps and cleansing agents may be produced and more wear may be expected from many a garment. For example, if coffee stains stay in a tablecloth longer than prune juice stains, the scientists make elaborate tests to ascertain what chemical changes account for the difference. Some substances, such as grease or oil, make dirt penetrate deeper into the fabric or cling longer in it. The laboratory wants to know why, and how to remedy it. Every day, assistants in the laboratory run samples of various kinds of cloth through rollers that smear them with all kinds of "dirt." Then these samples are washed in a "launderometer," a machine which duplicates washing condi-

tions in a home or laundry, Finally,

each sample is tested for color fast-

ness, staining, shrinkage and re

sistance of the fabric to laundry ac-

HELLO, FOLKS -

About Locker Boxes: Need a locker? We have lockers for rent in three different sizes. The prices of these is \$8.00, \$10.00 and \$12.00 a year. A 10 percent discount is allowed if

lockers are paid for a year at a time. Take advantage of this discount — get a good locker — just the size to fit your needs. Rent your locker at the cream-

Locker Supplies:

We also have available, locker supplies of all kinds, such as meat paper in 5-pound rolls; quart and pint cellophane bags and chicken cellophane bags. Also Ball Freezer jars, both pints and quarts. Buy your locker supplies at the creamery.

About Milk:

in your honesty.

your family gets neglected at their meals and between meals! Be certain to have plenty of good, wholesome "Potlatch Chief" brand pasteurized milk on hand at all times. It's the best food for them, and a necessary food to insure the best of health. Also: Keep well supplied with other "Pot-latch Chief" Dairy Products, and you will be keeping that family of yours happy and healthy.

One over-enthusiastic fisherman was haled into court, charged with catching 18 more black bass than

the law allows. "Guilty or not guilty?" asked the judge.
"Guilty," the young man said.
"Ten dollars and costs," an-

nounced the judge.

The defendant paid the fine, then asked cheerfully, "And now, Your Honor, may I have several typewritten copies of the court Does your family get plenty of record made to take back and milk? Never let it be said that show my friends?"
