Ben P. Cook, principal,
Mrs. Elsie Deobald, Mrs. Fern Lindquist, Ross Armitage, David Clayton,

LeRoy Templeman. Definite assignments of High school teachers will be published completed.

All eighth grade students in the entire district will come to Kendrick; where the class will be departmentalized and taught by High school teachers.

will be taught in Juliaetta, Leland Southwick, Gold Hill and Cedar Ridge. The first and second grades will be taught in all schools operating this year.

fall and students will be transported to Juliaetta and Southwick, re-

Parents who have beginners start ing this year are asked to circle Tuesday. August 17 on their calendars with red — as that is a very important day. All beginners at Kendrick, Leland and Southwick will meet at the Kendrick School at 9:00 a. m., and those from Juliaetta will meet at the Juliaetta Methodist church at 1:30, where they will parcicipate in a pre-school health conference. Gold Hill and Cedar Ridge will not participate in this conference since similar conferences were held in those communities this summer. Children are asked to bring their birth certificates.

About Starting Age
October 1st has been established by the board as the deadline for admitting six-year-old pupils. beginner must be six years of age on or before October 1st, 1948, to Smith were Sunday dinner guests of be eligible for admittance during the ensuing term.

#### Bird Hunting Dates Not Set

Setting of hunting dates for upland game birds in Idaho this year has been postponed until July, the fish and game department announced this week. At its recent meeting in Boise, at which big game and fur seasons were determined, the fish and game commission decided that it was too early to obtain reliable estimates of what the bird situation might be next fall.

On recommendation of T. B. Murray, director, the commission requested bird biologists and conservation officers to make a detailed survey of bird conditions during the spring and summer. Size of the hatch, condition of broods, and increase or decrease of game birds in comparison with last year will be studied. Reports will be made prior to the commission meeting. Michael Throckmorton. Coeur d'Alene, and Maurice Lundy. Boise, are the bird biologists in charge of the survey. The investigation will cover Hungarian partridge and grouse as well

as pheasants. Although leaving shooting seasons to a later date, the commission reaffirmed its policy of several years in the protection of hen pheasants. Shooting of hens has been prohibited for three years, and according to latest commission declaration, will continue to be prohibited.

#### **New Home Demonstration Agents**

Two new home demonstration agents — those versatile women who work for better home and community life, will be on the Idaho scene this the Davidson Nursing home last home Friday. year. #### WHEAT PRICES DECLINE

Marketings of wheat continued heavy during the past week and prices declined an additional several cents per bushel at most points, according to reports to the Federal-State Market News service. Quotations at a number of points were below government support levels but larger crops in the United States and Europe than a year ago caused Mrs. Joe Merz at Leavenworth, Wn. and Richard Konen, son of Mr. and buyers to hesitate in making important purchases for future needs. Pacific Northwestern markets held independently firm, but prices of California wheats dropped to the lowest level since June of 1947.

Domestic supplies of wheat for 1948-49 are now estimated at 1,437 million bushels, or slightly less than the 1,449 million bushels available for 1947-48. This is considerably above the 10-year (1937-46) aver-Lewiston, and Joe A. Langdon, son age of 1,252 million bushels and is exceeded only by last year and in 1942-43 and 1943-44 when carry-over Mrs. Kanikkeberg are sisters.

Mrs. Lester Wallace and Randy returned home last week, accompanied by Gary Hill of The Dalles, Oregon, who will visit for a time with his about the double ring ceremony in the local presence of 80 relatives and close smallers than 1943-44 when carry-over stocks were unusually large. Carry-over turned home last week, accompanied by Gary Hill of The Dalles, Oregon, who will visit for a time with his about at the double ring ceremony in the local presence of 80 relatives and close smallers than 1943-44 when carry-over stocks were unusually large. ## Googreich FIRST IN RUBBER

Al Finch, manager of the Cusick W.W.P. office, evacuates his wife-one of the last to. leave the flooded town.

the Washington Water Power Company, had a boat and motor—the only effective means of transportation in his flooded town.

He helped the families of Cusick evacuate. For three days and nights he went sleepless. When he wasn't aiding his neighbors, Al was busy with electric service. Over streets that had become canals, the new lights of Cusick gleamed at night to guide boatmen.

Day and night, Al patrolled the water-filled valley by boat, checking service lines-guarding against power failure. When he found trouble, he obtained and directed company crews so that electricity could be kept flowing.

The Washington Water Power Company is proud of the efforts of Al Finch and men like him, who, in areas harassed by floods, did everything within their power to maintain electric service and to assist the residents of their communities.

Cusick's new brick high school bears a high water mark that tells the tale of the worst flood in 52 years. Families stored their belongings on the second

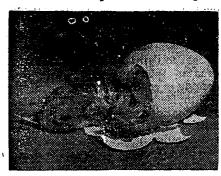

#### Three Diseases Take **High Toll of Turkeys Heaviest Loss Occurs During Growing Period**

Nearly a third of all turkeys hatched are lost during the growing period. This statement is based on findings of Utah Agricultural col-

Of considerable importance to a control program is the fact that the three diseases known to be the greatest killers of poults-paratyphoid infection, pullorum disease and infectious sinusitis, which may be transmitted through the egg from parent to the offspring-cause 51 per cent of the brooder loss.

If a grower starts with a healthy, vigorous poult, the job of keeping the bird healthy is relatively simple. Thus the first problem for a pros-

Birth of poult at Timmerman farm, Jefferson county, N. Y. Photo shows baby turkey off to a good start.

pective turkey producer is to buy poults from hatcheries that have a to train students to live creatively reputation for producing healthy and fearlessly as responsible citipoults. As it may be impossible for zens of the atomic era. With the source, cooperative effort may be helpful in investigating the breeder and hatcher.

of brooding equipment are essential to health of the poults. Basis of sanitary procedures is to prevent healthy individuals from coming in contact with the infectious agents of disease. All weak-looking poults should be kept separate from the healthy fowls and strict sanitary practices must be maintained during the brooding period.

#### Early Spraying Advised For Black Cherry Aphid

Sprays applied before the buds break, say insect specialists, are said, will be an equal partnership more consistent in controlling the of faculty and students in shaping black cherry aphid than sprays made after the buds are open.

Feeding of the black cherry aphid, if present in large numbers, affects the size and flavor of the fruit Also, a secretion known as "honeydew" produces a sticky and unattractive appearance of the fruit, especially if it is to be sold as fresh fruit. Development of a sooty fungus in the honeydew may contribute further to the unsightly appearance of the cherries. Sweet cherries are more commonly infested than sour cher-

#### Neglected Farm Forest Termed Valuable Asset

The farm woodland is paying off. That long neglected group of trees that stands on the back "forty" and which once was eyed with a resentful attitude because it occupied land that could far better be devoted to grazing, now becomes a definite and valuable asset.

It is one that can be quickly converted into cash. To the owner has come the realization that the farm will produce something more than grain, root crops, pasture or dairy products. Trees also are a crop, and a paying crop, even on the poorer types of soil where intensive agriculture is an impossibility.

#### **Modern Stock Barn**

War-born quonsets have been adapted to many farm uses. Above photo shows how a Brighton, Mich., farmer utilizes a quonset. Note the improved window arrangements.

#### **Prompt Action Required** To Relieve Cattle Bloat

Removal of the gases from the rumen is the primary object in treatment of bloat in cattle. If bloating has just started, the animal should be forcibly exercised and the distended abdomen massaged or kneaded with the clenched fist to bring about belching of the gases from the stomach. A wooden gag can be placed in, and across, the mouth of the bloated animal.

#### 'Operation Windchill' Tests Climate's Effect on Army

In the most extensive test of acclimatization yet to be undertaken, 32 air force soldiers, selected for high physical and mental capacity from a group of volunteers, have been flown from the semi-tropical climate of McDill field, Fla., to a sub-Arctic cold area of the Far North. This test is known as "Operation Windchill," and the object is to determine what may happen in a possible future war to the physical and psychological well-being of soldiers rapidly transported by air from warm climates to extreme Arctic cold.

The 32 soldiers had been stationed at the Florida post for months and were completely adjusted to local climatic conditions. Within less than 15 hours they were amid snow and ice in zero temperatures setting up a bivouac.

The men have been divided into three groups. One group will be fed a ration of about 900 calories a day, less than the average human requirement. Another will receive the equivalent of 1,800 calories a day.

In other cold tests conducted with animals, mice, rats, rabbits, canaries, pigeons and chickens were frozen to death in cages kept at a temperature of about 35 degrees below zero. Mice succumbed most quickly (25 minutes), canaries were next, (36 minutes), while rats lasted from three quarters of an hour to

#### College Trains Students To Cope With Atom Age

A program to remold education to meet the demands of the new age is under way at Dakota Wesleyan university, Mitchell, S. D., which is redesigning its organization a single grower to know the poult | guidance of a group of educators, incorporated as the foundation for integrated education, the 420 students and 32 faculty members of Proper housing and proper use Dakota Wesleyan are serving as the "pilot plant" in the foundation's search for the new pattern in edu-

As the basis for its reorganization the college is studying all knowledge that will give the student under-standing of the modern world. Dr. Samuel M. Hilburn, president, explained that both student and faculty had started to re-examine "every phase of living and thinking.'

In its ultimate form, the college will erase departmental divisions. Among other changes, Dr. Hilburn every phase of the college program.

Instead of little "bundles" of knowledge in the physical sciences, social sciences or humanities, the instruction will be tied together into a meaningful whole, he observed. From this will come a rounded understanding of the principles and meaning of the modern world, Dr. Hilburn hopes.

#### Lighted-Cigarette Vender

Highway safety organizations frequently have reported accidents which occur when the driver diverts his attention from the road to the process of lighting a cigarette. It has been estimated that a driver may have his attention diverted from seven to 24 seconds during the various motions of fumbling for his pack of cigarettes, fumbling for matches or reaching over to press the lighter in the dashboard, and lighting the cigarette by striking the match or applying the lighter to the cigarette. Additionally, when matches are struck during night driving, there is a possibility of momentary blindness induced by match glare. A new automatic lighter and cigarette dispenser for motorists will reduce these hazards. When a lever is pressed, the cigarette falls into a trough, is held against the filament by a small spring, and may be removed in three to four seconds already lighted.

#### Washington Born February 11?

Date of Washington's birthday having often been subject to question, the following facts and figures will help clarify the matter: The length of the mean astronomical year is 365 days, five hours, 48 minutes and 46 seconds. In 1582, Pope Gregory XIII, finding the Julian calendar 10 days behind the sun, moon and stars, decreed that October 5 should be October 15, and that, in addition to the extra day, February 29, in leap year, a other day should be added in years divisible by 400, such as 1,600 and 2,000. This system gradually was adopted by various countries, and it was not until 1752 that it was put in force for the British colonies, by which time the difference had become 11 days, and September 3 was made September 14. From this it would appear that while the anniversary of Washington's birth may now, by the Gregorian calendar, be properly considered as February 22, it nevertheless remains a fact that the Washington family Bible shows clearly the actual date of his birth to have been February 11.

#### Cover Crops Reduce Soil Erosion Losses Research Tests Show Four Main Advantages

How cover crops seeded in corn and other row crops could help farmers fight erosion, build up the soil's organic matter and add to the nitrogen supply, is indicated in studies by research men in Iowa agricultural experiment station.

Four major advantages are cited: Cover crops protect the soil from August to May. Onefourth of the annual soil loss occurs during this period.

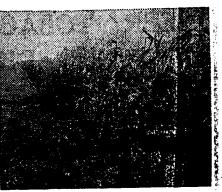

Well-fertilized legumes and

grasses add organic matter to the soil that helps resist erosion during the May and June period: This is the time when one-half of the annual soil losses occur.

Cover crops add nitrogen to the soil, especailly when legumes are a part of all the mixture.

The yield of corn will be slightly increased in the year following the seeding of cover crops.

Research workers have developed a plan that licks the problem of seeding the cover crops. Just before

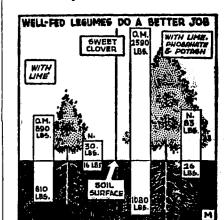

Good field of corn secured from proper plant food.

laying by the corn, they broadcast the seed with an endgate seeder. Weeders are attached to the cultivator to help cover the seed and better growth results.

#### Clover and Alfalfa Need Limed, Fertilized Soil

Sweet clover and alfalfa will do a good job of increasing the soil's supply of nitrogen and vitally needed organic matter if they are well fed.

Legumes are heavy eaters of phosphate and potash. They thrive best in a soil that has been limed to corract acidity and to furnish ca

When legumes get a full of needed nutrients they will produce top results. That was shown in Newton soil experiment field in II-

The accompanying chart summarizes results. Sweet clover grown on soil that had been limed and fertilized with phosphate and potash produced 63 pounds more nitrogen and a ton more organic matter per acre than that grown on soil that had received only lime. Another advantage of well-fed legumes comes in improved soil tilth.

The sturdy tap roots of well-fed sweet clover and alfalfa drive through plow sole compactions and push mineralized organic matter deep into the soil. They open tight soil to air and moisture. The added organic matter and better tilth 18 to 25 inches deep enable crops following in the rotation to make more efficient use of the plant food available in the soil.

#### **Increased Production** Of Butterfat Required

Dairy farmers whose average annual production per cow is only 6,000 pounds are operating on a bare subsistence figure, it is pointed out by Howard O. Selby, general manager of the United Farmers of New England. It is not unreasonable to suggest that an annual production per cow of 7,500 pounds would be possible and that it would yield an economic level more nearly in line with other groups in the nation, he adds.

#### Cleanliness Emphasized In Treating of Wounds

Horses under treatment do much better at pasture than in stables, if the weather is suitable. If sick horses must be stabled, quarters should be clean and well-ventilated. Be gentle in dressing wounds, clip closely or shave the hair around the wound and make sure that no discharge from around the edges is carried into the wound. Proper drainage of the wound must be assured.

#### MICKIE SAYS-

**Demands Close Supervision** Despite costly improvements and rigid standards of production, rail prices have dropped decade by decade from Bessemer's original \$250 per ton in 1863 to less than \$50 a ton, or approximately two and one half cents a pound in early 1947.

**Production of Steel Rails** 

The 1947 production of two million tons of rail steel is being put to use on the 398,000 miles of track that bind the continent together carrying one billion passengers and 2.5 billion tons of freight each year.

On the main lines, the modern steel rail has an average service life of 15 years. In the last decade, rail failures per 1,000 miles of trackage, after two years' service, dropped from 12.7 per cent to 3.6

Almost as exacting an operation as watchmaking, production of rail steel begins as a heated ingot is taken from the soaking pit and de-livered to the blooming mill. Then the steel is rolled in a 20-step opera-tion, through "roughing" and fin-ishing machines, designed not only to shape the rail but literally to knead and "work" it to greater tensile strength.

Uniformly cooled to reduce the danger of internal shatter-cracks, the rail is straightened and its bolt holes drilled. At this point, the lab-oratories conduct resilience tests on sections of each lot of rails, dropping a ton weight from a height of 20 feet to deliver a blow 25 per cent greater than the steel will ever receive in roadbed service.

Samples are then given physical examinations and put through stress tests to show that they will stretch a minimum of six per cent without cracking. Finally, each rail is measured and checked against rail standards to insure that it does not vary more than three-eighths of an inch in length over its 39 feet.

#### **Insect Control Practiced Centuries Before Christ**

The practice of fumigation is not a new one. As early as the 12th century B. C. sulphur was burned as a measure to keep down insect infestations.

Different materials such as incense, smokes and aromatic substances were tried from time to time until in 1886 hydrocyanic acid gas was first used; and today it is one of the most outstanding fumigants on the market.

The scientific history of hydrocyanic acid commences with the accidental discovery of Prussian blue by a German chemist early in the 18th century. Investigations of this compound led to the discovery of hydrocyanic acid, or as it was then called, Prussic acid.

The reason for the practice of fumigation is to aid in the elimination of insects in homes, flour mills cereal plants, grain storages and other types of buildings. The big problem is to make sure that the fumigant reaches the insect in a high enough concentration and for a long enough time to insure a 100 per cent kill. Insects breathe the toxic fumigant and are subsequently asphyxiated.

Theoretically, this practice amounts to introducing a lethal concentration of gas in an enclosed space for a certain length of time under certain conditions.

#### Saving Time on Farm

J. D. Blickle, specialist in agricultural engineering, Ohio State university, often wonders why a farmer who is eager to get a better cornpicker to save hours of harvesting time will store corn in an out of the way crib that compels the same man to put in extra days in feeding livestock. Building layouts on thousands of farms are 1880 models and quite a fraction of them were planned just before their owners left to gather up a few sacks of California gold in 1849. Blickle claims a lot of time could be saved on thousands of farms by relocating some of the smaller buildings and by changes in the interior of the barns. Fifty extra feet of travel twice a day adds up to a 20-mile jaunt in the course of a year, and a bushel of corn carried one way on the trip would make a 10-ton load for the walker if he moved all of it at once. This university specialist claims that a farmer accepts his sentence to hard labor in doing chores because he can serve a little of it at a time. A half hour early in the morning and repeated at night permits the farmer to use an installment plan to pay for the extra years he spends in the chore gang.

#### Making Maple Syrup

About six runs of sap are considered a good season for maple syrup producers. If the sap is of average sweetness, around 2 per cent, it takes about 45 quarts to make one quart of syrup. Because of high labor costs, farmers have been developing gadgets and devices to cut down expenses. Some have devised home - made power - tapping machines or have purchased commercial makes; others are using pipe lines to take sap downhill instead of using team or tractor; and there are new methods of filtering that speed the work. Two hours is the ceiling for efficient production of a gallon of syrup. Last year the average time spent by producers who kept records was one hour and

#### SO YOU WANT TO GO HUNTING THIS

The Idaho Fish and Game Commission has announced a number of changes in the bird hunting regu-Church Services.

Many of the young people and the pastor's family will attend one of the following Methodist Camps at Twinlow, Lower Twin lake, near Rathdrum, Idaho:

The bird funting regulations this fall, among them are open season on ruffed and blue grouse, as follows: In Benewah, the following Methodist Camps at Twinlow, Lower Twin lake, near Rathdrum, Idaho:

The bird funting regulations this fall, among them are open season on ruffed and blue grouse, as follows: In Benewah, the following Methodist Camps at Twinlow, Lower Twin lake, near Rathdrum, Idaho: ber 1 to 3 inclusive. Bag and possession limit — two in the aggregate.

Chinese Pheasants - Clearwater, Idaho, Lewis, Latah and Nez Perce counties, November 7, 10, 11, 14 and 17. Bag and possession limit two

Bobwhite, Valley and Mountain quail, same counties and days as above — bag and possession limit five birds in the aggregate.

Hungarian partridges, same counties and days as for Chinese pheasants — bag and possession limit five birds.

All upland game bird seasons shall begin at 12:00 o'clock noon on the first day of season, and on each succeeding day after the first day it shall be unlawful to begin shooting until one-half hour before sunrise, or to hunt or shoot after sunset. It is unlawful to shoot at, hund or kill any game bird with a pistol

Clearwater, Latah, Lewis and Nez Perce counties and that part of Idaho county lying north of the Main Salmon river and west of the Little Salmon river, and that part lying south of the Main Salmon river and east of the South Fork of the Salmon river, and that part of Valley county lying east of Smith creek and north of Big creek — October 1 to October 31 — Deer.

Elk — Shoshone county lying south and east of the Bovill-Clarkia-Gold

Center-Roundtop-Avery-Bullion road to the Idaho-Montana state line —

October 1 to 31. Latah and Clearwater counties, Idaho county north and east of the Main Salmon river and that part of Idaho county known as the Chamberlain basin, being the area south of lain basin, being the area south of the main Salmon river and east of the South Fork of the Salmon river, and that part of Valley county lying east of Smith creek and north of Big creek — October 1 to 31.

That part of Lemhi county north of the Main Salmon river and north of Main Fourth of July creek — October 5 to 31.

Special Hunts
So you think you'd like to go on

So you think you'd like to go on special hunt on a "game preserve." Well, you can, if you're willing to spend the money and gamble that your name will be drawn in a lottery. In fact, you can even kill one of America's scarcest big game ani-

mals — a bull moose.

Fee permits for these "special" hunts range from \$3.00 for a deer; \$4.00 for an antelope; \$5.00 for an elk to \$30.00 for a moose. Some of these hunt charges include the tags,

but most do not. Frankly, it seems to us that the Idaho State Game Commission is 30c rapidly turning into a money-making proposition, rather than interesting itself in providing game and fish for the people of Idaho — whom it is supposed to serve.

If any local residents are interested in these special hunts all information sent us may be seen at the Gazette office.

#### Advancement Is Easier

Another step in the U.S. army's program to make it easier for enlisted men to rise through the ranks has been announced by the department of the army. It consists of a new rating system in which non-commissioned officers, for the first time, will officially evaluate the work of the men who serve under

In the past, efficiency reports for enlisted men have been made by officers only, and have consisted of one-word ratings ranging from "un-satisfactory" to "excellent." The new system provides for detailed evaluations of a man's technical skid, leadership ability and similar qual-

These reports will be made by the direct superior of the man concerned, and in most cases this superior will be a non-commissioned officer. The next higher superior, usually an officer or warrant officer, will check the rating and also indicate his own evaluation.

Under the new system, a soldier's efficiency rating will directly affect his chances for promotion, advancement to a more responsible job, o. assignment to specialized training.

Efficiency reports will be made for all enlisted men above the grade

#### To Revive Cadet Program

The Naval Aviation Cadet program, which has been at a minimum since the war, will be revived in the fiscal year 1948, when it will draw from the schools and colleges of the country 2,000 prospective naval aviators. Young men who are interested in navy flying, have com-pleted two years of accredited college work, and are willing to agree to serve on active duty for four years, can contact any navy re-cruiting station for further infor-

#### Farm Crop Yields **Tests Reveal Value** Of Proper Nutrients High crop yields per acre on the farm, like mass production in industry, are the secret of financial success, according to Emil Truog, professor of soils at University of Wisconsin.

Good Soil Increases

"It costs no more for seed and tillage — usually the main expenses in crop production — to grow a \$50 crop than a \$25 crop," he declares.

Wisconsin tests show that additional crop yields resulting from heavy fertilization cost only \$2 to \$3 per ton for alfalfa and 10 to 15 cents per bushel for corn and oats.

"The extra cost of a larger yield per acre lies simply in the

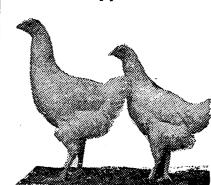

Proper fertilization has paid on thousands of farms, whether applied to corn, wheat, oats, soybeans, cotton or any other crop.

additional fertility removed from the soil. But even this is partly compensated for in the case of legumes by the greater amounts of nitrogen the bigger crop supplies to the soil.

"High acre yields are also the secret of success in erosion control and soil conservation. When yields on less erodible land are doubled or trebled through adequate liming and heavy fertilization, a bigger acreage of more erodible lands can be returned to forests and permanent grass. That means more and better food for all."

#### Herds and Flocks

Damp litter in laying houses frequently results in colds and other ting the watering pan on a frame over the drain pipe.

Dry litter pays off.

Feed is wasted when animals die. A pullet that dies in December represents a loss of 40 pounds of feed. The loss of a newborn pig represents a loss of 140 pounds of feed.

To avoid excessive loss of butterfat in skim milk in winter, run enough hot water through the separator bowl so it will come out the cream and skim milk spouts. Do this as soon as separator is up to normal speed.

Moldy or inferior corn is less likely to cause trouble when fed to cattle than when fed to horses and

#### Mechanized Hog Farm Makes Pig Raising Easy

A fully modernized and mechanized hog farm can be so rigged that one man can handle 100 sows and bring to market each year 1,500 to 2,000 hogs-a half-million pounds of pork on the hoof, according to Dr. Waldo Semon of the B. F. Goodrich company.

This is possible by mechanized means of conveyor belts, chutes and other devices. Tests show, he said, that rubber-tired tractors and other farm vehicles require only 40 to 50 per cent as much pulling power on plowed ground or sod as do steel wheels, and can plow a field in 25 per cent less time and with 25 per cent less fuel consumption.

Deep Litter Will Help Keep Laying House Dry Deep litter will help keep well-

insulated and well-ventilated laying houses dry this winter, says Iowa State college. Not only will there be more eggs to put in the crate, but also the house need not be cleaned as frequently if the litter and droppings are kept dry. A deep litter keeps the floor dry because it develops heat as it slowly decomposes in the laying house, insuring better flock health.

PUBLISHED BY THE KENDRICK CO-OPERATIVE CREAMERY

HELLO, FOLKS -

To All Milk Bottle Collectors -Bottles are still a very scare item at the creamery - and we still need bottles in order to bottle more milk. Please, folks, keep your bottles gathered up and return them promptly. We know how easy it is to overlook them—but we surely need 'em anyway!

About Ice Cream:

Now that harvest has begun, you busy housewives should serve Potlatch Chief Ice Cream often. Serve it in place of pie or cake and think of the time and energy you save working over a hot

Ice cream, you know, is ready to serve - no before-hand preparations are necessary. After spending hours working in the hot sun your harvest crew will think you're the best cook in the country if you make the wise choice of serving them a cool dessert of Potlatch Chief Ice Cream.

About Other Products: Don't forget our other Potlatch Chief brand items. Eggs, Butter, Milk, Cottage Cheese and

Cream. Always insist on "Potlatch Chief" Brand Dairy Products. The name gives you assurance of

The kindly old lady stopped be-fore the blind man on the corner, fumbled in her purse and gave

him a \$2.00 bill. "Lady," said the blind man, \$2.00 bills is bad luck. Ain't yuh got two \$1.00."

"Mercy, how did you know it was a \$2.00 bill if you're blind?" "I ain't blind, lady. It's my partner that's blind. Dis is his day off and he's at de movies. . . Me, I'm a deaf mute."

Always ask for "Potlatch Chief" brand butter by name.

#### Dear Customer:

Due to a drastic change in the length of time credit is extended to us by most of our wholesalers, we are forced to adopt a new policy.

Most of our wholesalers demand that we pay our bills for merchandise either weekly or every two weeks. If we can not meet their demands, our credit is shut off and we can get no additional merchandise. Under these circumstances, we can not continue to operate unless we can collect all our accounts regularly so we may keep our stock complete.

In the past we have tried to give you first quality merchandise at a fair and reasonable price. On a cash or thirty-day basis we hope to do better than formerly.

We will continue to extend 30-day credit with all accounts payable IN FULL before the 10th of the month following date of purchase. We shall send statements the first of each month to ALL our customers regardless of the size of the account. We feel that we both will benefit from this

We appreciate your patronage and hope we may continue to serve you under this new policy.

Your credit is a friend in need: keep it good.

Sincerely yours,

R. L. BLEWETT
