WHEAT MARKET PRICES RE-MAIN IN STATIC CONDITION

Domestic wheat markets were very quiet, with prices fluctuating Red Cross Pharmacy.

Tom Keene purchased the stock and fixtures of Mr. Nesbit's drug store at Deary, moving them down of trade generally were limiting takings to nearby requirements only, but the strong holding tendency among growers and additional large purchases by government agencies provided the sustaining influences. Receipts at the principal winter and spring market centers east of the Rocky Mountains were smaller than the previous week and moved quite readily. Pacific Northwestern mar-kets, however, were inactive because of the longshormen's strike and the embargoes on shipments to coast terminals. California markets showed little change with small offerings offsetting the only moderate local

World production in 1948 will be Mrs. George Havens and Sunday with his parents, Mr. and Mrs. Harry stock and palms.

Ansted officiating. The altar was the production for the decorated with white gladoli and million bushels, about 4 percent big-stock and palms. The bride's gown was of white part of that gain is accounted for by the increase in the United States, which, together with a substantial increase in China, overbalances reductions in most other areas. Rye production is forecast at 1,605 million bushels, compared with the prewar average of 1,730 million bushels and the 1947 crop of 1,491 mil-

lion bushels. Harvesting of wheat in the late districts made good progress during the week except for some delay in the Pacafic Northwest, caused by showers. This work is now about finished. Plowing and seed bed preparation for winter wheat was rather general and seeding is becoming more active except where retarded by dry soil. Many areas need rain, particularly in the Rocky Mountain region and the southwestern plains. Wheat seeding is 75 to 90 percent complete in the western part of Kansas and beginning in the eastern areas. Some scattered seeding was reported from the north. Early seeded wheat in the southwestern portion of the great plains is coming up to fairly good stands.

The U.S. Department of Agriculture reports that through August 31, 1948, the Commodity Credit Cor-A reception was held immidately poration authorized loans to farmers on 94,842,988 bushels of 1948 crop wheat, oats, barley, grain sorgroom topped the three-tier shums and rye. Farmers had signed, in addition, purchase agreements for a total of 8.609,455 bushels. Following are the respective grains put under loans through August 31: Wheat, 65,585,976 bushels; oats, 1,-546,041 bushels; barley, 3,509,519 bushels; grain sorghums 98,414 bushels; rye, 103,038 bushels. Purchase agreements were signed by farmers on 8.193,585 bushels of wheat; 196,-137 bushels of oats; 205,729 bushels of barley and 14,004 bushels of rye. The department plans to issue this type of report monthly.

The Commodity Credit Corporation purchased 11,310,013 bushels of wheat: 340,000 bushels of barley and 1,470,000 bushels of oats during the week ending September 17. Flour purchased during the week totaled 20.000,000 pounds; equal to about 333,333 bushels of wheat. The wheat purchases consisted of 2,805,-575 bushels through Kansas City; 1,682,905 through Minneapolis; 6.-168,200 through Chicago and 653,333 bushel sthrough Portland, Oregon. Cumulative purchases since July 1. 1948, totaled: Wheat, 112,595,514 bushels; flour 534,420,000 pounds (equivalent to 11.832,687 bushels); plete football schedule ahead of barley, 10,955,664 bushels; grain soring Mrs. Havens. Other guests were them, and Coach Armitage says he ghums 5,856,427 bushels: rye, 267,Mr. and Mrs. Henry Brammer. The only hopes the weather man will be 857 bushels and oats 1,470,000 bush-

Eggs Kept Cold, Covered. Retain Freshness Longer

Eggs need to be kept both cold and covered if they are to keep fresh and in the best condition for eating.

Extension food preservation specialists urge that eggs be gathered and immediately placed in a refrigerator or other cold place and kept there until used.

Experiments show that at ordinary room temperature, eggs lose as much freshness in three days as they do in the refrigerator in two weeks.

When eggs are stored in the refrigerator they should be covered stead of keeping them in an open bowl in the refrigerator, put them in a covered dish or one of the closed vegetable containers.

Another tip is not to wash eggs until just before using them. The dull bloom on the shells is a protective film which helps prevent germs and odors from entering the egg through pores of the shell.

New controlled methods of high temperature egg washing have been developed. It is best to store eggs to be washed at around 50 degrees so they will not sweat when taken from the cool room.

Apprentices Play Major Role In England's Building Record

Britain today is building more than 20,000 new homes every month -a record unmatched by any other

Since the end of World War II, more than 680,000 families have been re-housed under Britain's postwar building program, and it is estimated that 2,500,000 people have been re-housed. Nearly 418,000 of these families have moved into new homes. The rest have been rehoused in bomb-damaged homes and converted dwellings.

Helping to re-house 20,000 families every month is Britain's young army of apprentice builders. All told, more than 3,000 boys of 15 to 19 are putting up some 1,800 houses over 120 acres in England and Wales.

Building while they learn, these youngsters work under teams of highly-skilled craftsmen instructors-carpenters, bricklayers, painters, plumbers and plasterers. But they do everything themselves. They dig trenches, lay foundations, put down the drains and erect the scaf-

Apprentices work a 44-hour week, spending one full day a week studying the theoretical side of their

Fire Hazard in Sprayers

Spraying of quick-drying enamels, lacquers, paints and similar finishes in the home has become a common practice and has created new home fire and explosion hazards. These liquids give off vapors which are flammable and which, when mixed with air in proper proportions, form mixtures which are ready to ignite in the presence of a source of ignition such as a lighted pipe, cigar, cigarette or a static spark. This hazard may be guarded against by adequate ventilation. However, the application of these quick-drying finishes, either by sprayers operated by hand or by those attached to vacuum sweepers, should be carried on out of doors if possible.

Proper Use of Pliers

Pliers should not be used to loosen or tighten nuts because the pliers may slip off; use a wrench of the proper size for that purpose. Be-fore attempting to use a pair of pliers on an electric circuit be sure the current is off, otherwise the user may receive a painful or perhaps fatal shock. When cutting wire under tension or when cutting spring wire in coils, always take hold of the wire close to the cutter, stand so that the loose end will not fly into the face and be sure that cutting is done away from cutter. Pliers and wire cutters, like screw drivers, should not be used as substitutes for hammers.

Soap-Making at Home

Not so many years ago all soap the family used was made at home. Soap making, like many of the common household duties of the past, has, for the most part, been taken out of the home. Today the process of soap making, once so familiar to all housekeepers, is known to comparatively few. However, a considerable saving in the family budget could be effected by utilizing all scraps of fat and turning them into soap. Soaps for all purposes can be made in the home, even toilet soap.

Kensington Stone

The famous "Kensington Stone" of Minnesota contains a message ostensibly written by a party of Vikings in 1362. It tells, in Norse characters, that a band of Swedish and Norwegian explorers, had reached what is now Minnesota and then had run into serious trouble. presumably with the Indians. The stone was discovered in 1898 near Kensington, Minn., by Olaf Ohman, a Swedish farmer. The 200-pound stone now is at the Smithsonian in-

New Steel Plant in Walia To Boost Britain's Output

More than 3,000 men are working night and day to complete the bed of a vast new steel works at Margan, near Port Talbot, in Wales. The plant will cost 60 million pounds (240 million dollars). When finished, this huge enterprise will be the most modern steel plant in all Europe and will produce some 16,000 tons of pig iron and 29,000 tons of steel ingots per week.

The new plant will boost still more Britain's steel output, which continues to break records. Production target for 1948 is 14,500,000 tons of ingot steel. Output during the first four months of this year was at the rate of just over 15 million tons a year, a record for the industry.

Architect for this tremendous project is Sir Percy Thomas, honorary member of the American Institute of Architects and three times president of the South Wales Institute of Archi-

The Steel Company of Wales will draw all its limestone supplies from its own quarry at Cornelly. The wharf and dock at Margan are to be enlarged to cope with extra ore required for the increased production. Welsh mills already produce 70 per cent of Britain's tinplate.

Check Pastures. Havlands. For Ferns, Farmers Urged

Livestock raisers are warned of the danger of fern poisoning if pastures become scanty as a result of hot, dry

The warning, by American Veterinary Medical association, declared: "Dairy cows are likely to cat dangerous quantities of ferns when good grass becomes scarce as a result of over-grazing or unfavorable weather. An animal stricken with fern poisoning may become suddenly and acutely ill and die within one to three days. Or the condition may come on more slowly, starting with a loss of appetite and a slight nosebleed. These cases linger on for five or 10 days, but practically all are fatal."

To guard against such losses, farmers are urged to check their pastures and hay lands for the presence of heavy growths of fern.

If a case of fern poisoning is suspected, the herd should be moved to new forage immediately, pending the results of a diagnosis to determine whether this or some infectious disease is the real cause of trouble.

Freezing of Eggs

Only fresh clean eggs should be selected for freezing. When preparing whole eggs, stir each egg slightly with a fork-just enough to mix yolk and white. Pour into small bags, seal and freeze. When yolks are to be frozen, beat them slightly-not enough to make them fluffy. To each six egg volka add one teaspoon of sugar o one-half teaspoon of salt. This prevents yolks from congealing during storage. A one-half pint package is convenient for freezing eggs, since all eggs in a package should be used promptly after thawing. Containers should be filled only nine-tenths full to allow space for expansion during freezing.

Family Income Figures

More than four out of every 10 nonfarm families with incomes of \$5.000 a year or more live in small townscities with populations of under 50,-000 and rural non-farm areas. This is shown in data by the U.S. bureau of the census on the distribution of family income in the United States by size of place of residence. The other families in this income class live in the larger cities. Even here, however, the big cities do not have a preponderant edge, indicating that big family incomes and big cities do not necessarily go together, any popular notion to the contrary.

When Margarine Made Debut

Margarine was first developed in 1870 in response to the demand of Napoleon III of France that someone provide a nutritious spread to safeguard the health of France's fatstarved soldiers and civilians. When the French chemist, Hippolyte Mege-Mouries, first manufactured margarine, he used principally beef fat churned with milk. Today's margarine is entirely different from the French chemist's original product, for margarine now is made almost totally of vegetable oils and is fortified with Vitamin A.

Utopian U. S. Community

Although it is as much a part of the United States as Long Island, Puerto Rico is the only community under the American flag not subject to federal income tax laws. Insular legislation recently enacted gives property and municipal taxes for a period of 12 years to new industries in 41 stipulated categories, as well as to new hotels and guest houses. Puerto Rico has its own insular income tax laws patterned after the federal legislation.

Worst Food Thief

One hundred thousand bushels of wheat were stolen from American 1938. Today that grain thief is still at large in many fields in the nation's Persian rugs. The famous crimson world-wide spread of this virulent, centuries-old plant disease and the stitution for safe keeping and public | made leaf rust the gravest menace to | wake one pound of cochineal crimthe world's foremost food crop.

Cost of Palm Oil Spirals; **New Sources Being Tapped**

Oil that grows on tropical trees and ends up in the making of tin cans or big-city building materials has a 1948 price tag nearly five times higher than it was before the war, according to a recent steel

industry survey. This vegetable oil, obtained from the African oil palm, tops percentage-cost rises for more than two dozen raw materials of steel manufacture. It is essential, however, as a protective coat in rolling strip steel, in tin and other metal-plating operations, and as a lubricating and cooling agent in such processes as wire drawing.

The term "palm oil," notes Na-

tional Geographic society, usually refers only to the product of the African palm, which in the United States goes almost entirely into the steel and tin-plate business. Other vegetable oils, notably coconut palm, at present are used chiefly in soaps, with minor amounts in margarine, candies and cosmetics.

The African oil palm, so named after its native continent, now is growing in other regions. Experimental stations which had been established in the Netherlands Indies and British Malaya were followed by extensive plantations. New palm oil operations also are rising in Latin America.

The African oil palm takes from four to eight years to mature. The fruits, which ripen to characteristic red-orange color, come in big bunches, in pointed oval forms one to two inches long.

Archeologists to Decipher Rosetta Stone Inscriptions

American archeologists have gone to Iran in quest of the first complete copy of the "Rosetta Stone of Western Asia"—the language key which unlocked the mysteries of several ancient tongues. The expedition is using standard mountain-climbing equipment and skyscraper scaffolding to copy and photograph the enormous, 2,000 year-old inscription. The expedition is being sponsored jointly by the University of Michigan and the American Schools of Oriental Research.

The inscription which the archeologists will study and an accompanying relief were carved more than 2,500 years ago by order of Darius, king of Persia, on the rocky walls of Mount Behistun, 500 feet above the plain and 100 feet above a sheer vertical wall.

Two previous examinations of the ancient writings, the first made 100 years ago by the English adventurer, Sir Henry Rawlinson and the second by a British museum group! in 1904, have been found inadequate.

The present day investigators hope to bring back a cast of the relief itself, re-examine all the doubtful passages from previous translations and copy four additional columns which have never; been transcribed.

The anscient inscriptions have had great historical significance in that the relief portrays Darius and his accomplishments in three different languages which were current 2,500 years ago.

Valuable Highway Hints

When one wheel runs off the pavement, the natural inclination is to turn the car quickly back on the road again or to jam on the brakes. Neither method is safe unless you are driving slowly. A better way is to take the foot off the accelerator, hold the wheels straight and allow the car to slow down gradually until it can be brought back into the road easily-without jar or sway. The same is true in the case of a tire blowout. A driver is instinctively inclined to jam: on the brakes when a tire "blows," whereas the proper thing to do is just to hold the car steady, using the brakes lightly, off and on, until a moderate speed is reached. Then use the brakes gently until the car stops.

Berlin, Bone of Contention A jumble of twisted steel and

shattered masonry at the end of World War II, the streets of Germany's once proud capital have been largely cleared by piling up the wreckage. Damaged houses have been repaired and some new ones built of salvaged bricks. Long before it was established in 1871. as the national capital of the united German empire, Berlin served as a government seat, first of Bradenburg, then of Prussia. As headquarters for the powerful Prussian kings, it expanded spectacularly. By 1850 nearly half a million people lived in this crowded, lively mecomplete exemption from income, tropolis of palaces and parks. The American section of Berlin, including Tempelhof airfield, extends south and southwestward.

Facts About Oriental Rugs Because Genghis Khan invaded

Persia with his Mongolian hordes in ancient times, many Persian rugs, even to this day, show a strong Chinese influence in their farmers in a single year. That was designs. Most oriental rugs have the estimated loss due to leaf rust in several borders. Seven is a popular winter and spring wheat belt. The found in oriental rugs is made from the female cochineal insect; the males do not contain the dye. Fifty economic importance of wheat have thousand females are required to

Cover Crops Reduce Soil Erosion Losses **Research Tests Show** Four Main Advantages

How cover crops seeded in corn and other row crops could help farmers fight erosion, build up the soil's organic matter and add to the nitrogen supply, is indicated in istudies by research men in Iowa agricultural experiment station.

Four major advantages are cited: 1 Cover crops protect the soil from August to May. One-fourth of the annual soil loss occurs during this period.

2. Well-fertilized legumes and grasses add organic matter to the soil that helps resist erosion during the May and June period. This is the time when one-half of the annual soil losses occur.

3. Cover crops add nitrogen to the soil, especailly when legumes are a part of all the mixture.

The yield of corn will be slightly 4. The yield of com wan a following increased in the year following the seeding of cover crops.

Research workers have developed a plan that licks the problem of seeding the cover crops. Just before

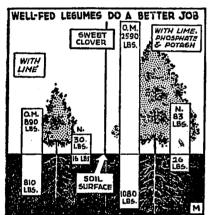

Good field of corn secured from proper plant food.

laying by the corn, they broadcast the seed with an endgate seeder. Weeders are attached to the cultivator to help cover the seed and better growth results.

Clover and Alfalfa Need Limed, Fertilized Soil

Sweet clover and alfalfa will do a good job of increasing the soil's supply of nitrogen and vitally needed organic matter if they are well fed.

Legumes are heavy eaters of phosphate and potash. They thrive best in a soil that has been limed to correct acidity and to furnish calcium

When legumes get a full quota of needed nutrients they will produce top results. That was shown in Newton soil experiment field in Il-

The accompanying chart summarizes results. Sweet clover grown on soil that had been limed and fertilized with phosphate and potash produced 63 pounds more nitrogen and a ton more organic matter per acre than that grown on soil that had received only lime. Another advantage of well-fed legumes comes in improved soil tilth.

The sturdy tap roots of well-fed sweet clover and alfalfa drive through plow sole compactions and push mineralized organic matter deep into the soil. They open tight soil to air and moisture. The added organic matter and better tilth 18 to 25 inches deep enable crops following in the rotation to make more efficient use of the plant food available in the soil.

Increased Production Of Butterfat Required

Dairy farmers whose average anhual production per cow is only 6,000 pounds are operating on a bare subsistence figure, it is pointed out by Howard O. Selby, general manager of the United Farmers of New England. It is not unreasonable to suggest that an annual production per cow of 7,500 pounds would be possible and that it would yield an economic level more nearly in line with other groups in the nation, he adds.

Cleanliness Emphasized In Treating of Wounds

Horses under treatment do much better at pasture than in stables, if the weather is suitable. If sick horses must be stabled, quarters should be clean and well-ventilated. Be gentle in dressing wounds, clip closely or shave the hair around the wound and make sure that no discharge from around the edges is carried into the wound. Proper drainage of the wound must be assured.

Jews Improve Palestine, Declares Science Editor

"An independent Jewish state may prove to be one of the most significant social and economic experiments of our age," says Edward L. Throm. social science editor of World Book encyclopedia.

Present day Palestine, often called the Holy Land because it is sacred to the three great religions of Judaism. Christianity and Islam, has been torn between old and new civilizations for the last 30 years. Ancient Arab villages are inconspicuous beside modern Jewish cities. The metropolis of Tel Aviv, founded by the Jews in 1909, is the second largest city in Palestine and the largest self-governing Jewish city in the world.

Throm pointed out that before the arrival of Jewish settlers under the terms of the 1917 Balfour Declaration, Palestine's agriculture and industry was at a minimum. The death rate was alarming, and few educational facilities were available.

Except near the coastal plains and inland valleys, which are much like Southern California, Palestine was a land of sandy wastes. Jewish settlers bought wasteland from the Arabs and transformed it into rich farmland by use of irrigation.

In the 1920's there were a few factories and wineries. Today there are thousands of industries which produce soap, chemicals, woodwork, cement, textiles leather goods and clothing. Jewish engineers dammed the waters of the Jordan and Yarmuq rivers and gave Palestine its first electric power station, completed in

Animal Health Endangered By Careless Use of Sulfa

Five dangers in the careless use of sulfa drugs for treatment of livestock diesases are cited in a warning issued by American Foundation for Animal

Sulfas work wonders in relieving certain diseases, the bulletin says, but "in the hands of inexperienced persons they actually may endanger an animal's health.

Unless plenty of water is available to the animal at all times, the patient is unable to excrete the drug and precipitation may occur in the kidneys. Forced intake of water, involving use of the stomach tube, may be necessary.

Any toxic reaction to the sulfa must be detected at once.

Treatment may be useless or harmful if sulfa drugs are given for too short or too long a period of time. The dosage must not be decreased too soon after the temperature becomes normal.

Sulfa drugs may be useless, too, if treatments are not given often enough during the critical period.

Young stock may be harmed unless the dosage is proportionately less for young than for adult animals.

Close cooperation between the veterinarian and the animal owner is urged by the foundation to insure the safe and beneficial use of sulfa and similar drugs employed in livestock medication.

Death Rate Among Insured

Death rate from all causes among U. S. life insurance policyholders reached a new low in 1947 at 737.9 per 100,000, with declines shown for practically all causes of death including heart disease and cancer, the Life Insurance Association of America reports. The 737.9 rate compares with 773.1 in 1946 and 763.9 in 1942, the previous lowest rate. These results are indicated by the experience of companies representing 73 per cent of the ordinary and industrial life insurance policies in force in all U.S. companies. Heart diseases of all kinds constituted the leading cause of death among policyholders last year. Nearly half of all the deaths included in the survey were attributed to heart diseases, cerebral hemorrhage and nephritis which together make up the principal diseases in the group called cardiovascular-renal diseases. The combined death rate from these causes in 1947 was 361.5 per 100,000 policyholders.

Painting Panels with Aluminum

When the aluminum wall panels on industrial buildings are to be painted for decoration, use of an inhibitive primer is not required unless the building is located where corrosive industrial fume or salt-laden air is present. Good adhesion and good bonding for subsequent coats are major considerations. Any good metal primer, except those containing lead pigments, may be employed. Aluminum paint of the metal and masonry type will give good results under these conditions. Sometimes it may be desirable to apply only a single coat of paint to obtain a uniform appearance. Here an aluminum paint made with leaf-free aluminum paste in a long oil varnish vehicle has been found to give a soft, uniform texture to the surface.

Auto Age Gets Horse Laugh

A horse has a better chance of staying healthy today than it did in the heyday of the old hitching post, according to livestock health workers. The community hitching post of a few decades ago was a trading post for equine diseases, and every whinny or nose-rub gave infectious germs a chance to pounce on a new victim. But when people switched from horses to automobiles for their jaunts into town, horses stayed home on the farm and kept their germs to themselves. As a result, certain infectious diseases once prevalent in horses, such as glanders, now have dropped to minor importance.

It's A Problem

trouble, were walking along Pennsylvania Avenue, in Washington, D. C., when they became suddenly aware of a long black car approaching, preceded by siren-sounding materials in average numbers. motorcycles in awesome numbers. "Who dat?" stammered one of the

SERVING COMMUNISM

As was to be expected, the investigations of communits influences and personalities in the government Morning Worship at 11:10. World have been confused by affirmations Communion Sunday. The Sacrament and denials, charges and counter-of the Lord's Supper will be observed as all churches throughout the world, be learned. But there can be no of all denominations, observe it on doubt that these influences have existed - and that they have been tolerated in very high places.

The real card-bearing communist Rev. J. H. Coulter, Paster

Morning Worship at 10:00, prompty. World Communion Sunday (see above). There will be no break between the church service and Sunday School, and all are asked to come at 10:00 and stay.

W. S. C. S. on Thursday, Oct. 7, at home of Mrs. Hugh Parks.

and the more timid fellow travelers who follow the party line but can't quite bring themselves to signing on the dotted line, can be ferrited out. The FBI and other agencies have been quietly carrying on an effective work to that end. Yet there is another phase to the problem which hasn't made the headlines, but in hasn't made the headlines, but in the long run, may be the most serious. That phase is the widespread public indifference to policies and activities which undermine the whole concept of representative government and an economic system based on the freest possible exercise of individual energy, talent and am-

If communism, or any other kind of total government, is to gain the driver's seat in this country, two things must happen. First, the basic industries of the nation must be socialized — which is just another way of saying that the instruments Young Peoples Service 6:30 p. m. Evening Evangelistic Service 7:45.
Tuesday, 7:45 p. m. A Missionary Service. Rev. Kvamme of North China.

Thursday, 7:45 p. m. Bible Study and Prayer meeting.

Way of saying that the instruments of production must be controlled by those who hold political jobs. Those who say this cannot happen here are blind to the lessons of history. We have, for instance, gone a considerable distance in socializing the electric industry. In one region in the W. S. C. S. To Meet Thursday
The Kendrick W. S. C. S. will
meet this Thursday at the home of its domination of the power supply, southeast, it has gone almost com-pletely socialized. In the Pacific Mrs. D. A. Christensen to hold their is the big boss. These are the enter-business session. There are several ing wedges, the precedents which fit ing wedges, the precedents which fit in perfectly with totalitarian purposes. There is now strong political pressure to extend the program of federal socialization of power on a nation-wide scale.

Second, total government requires an ever-increasing dependence of the public on government for services and benefits that it once earned for itself. Government is called upon to protect us against unemployment, the economic problems of old age, sickness, and so on. Little by little government becomes the dominating factor in our lives. It daily grows bigger, more dictatorial. So, in time, the stage is remly for the dictator—the Hitler who comes to power by constitutional means, and then destroys all constitutional rights.

The kind and well-meaning peo-ple who contribute in these ways to the break-down of pinciple are serving communism well. Freedom can never be a half-way proposition. We will keep it intact or we will lose it. — E. Hofer.

Milk Products Help In Conserving Grain **Better Rations Result** When Proteins Are Used

With a world grain emergency and a national drive to conserve grain used in feeding, and with grain prices high, milk by-products are more important than ever in poultry feeding.

Balanced rations probably can do more to conserve grain used in feeding than any other single measure. Milk nutrients found in skim milk, buttermilk and dried cheese whey have been found highly effective in building balanced poultry rations.

These milk by-products provide animal proteins of unusual quality. The milk proteins, lactalbumen and

Total Dry Milk Production-1946

casein, have a high growth promoting value and contain all the essential amino acids. These proteins give balance to the lower quality vegetable protein in grains normally fed poultry.

Milk by-products are rich in lactose, or milk sugar, a natural laxative which helps poultry maintain good intestinal health and minimizes the hazards of intestinal parasites. These milk by-products also provide minerals, particularly calcium and phosphorous and contain the water soluble vitamins of whole milk.

In preparing a balanced ration the object is to feed the correct proportion of the various nutrients that poultry require. In every case there is a point beyond which it is wasteful to include additional grain without providing other nutrients because the fowl cannot make complete economical use of all nourishment in additional grain.

Killing Chestnuts

The Asiatic blight which struck down native chestnut orchards in the United States, estimated at sums up to a hundred million dol-

Forest Fire Commissioner W. L. Shaddix inspecting chestnut burs for asiatic blight.

lars some 25 years ago, is still active, and doubt that it will pass over and let this luscious crop come back usually is accepted by well informed agriculturists.

Poultry Relish Grit; **Aids Grinding Process**

Grit is a material of value to poultry but full details are not yet definitely known, according to University of Delaware. It is certain that birds like it and, when grit is fed been widely recommended but appears to have no advantage where other forms of calcium are included in the ration. Actually it might be detrimental, say Delaware specialists. Helping the gizzard in the grinding process is the only known function of grit. A hard mica grit of suitable size doubtless should be available to all chickens.

Productivity Depends Upon Organic Matter

The soil's ability to produce high crop yields needed to feed hungry millions depends on its organic matter supply. Soils rich in organic matter are good "sponges" for soaking up and holding rainfall for crops. Organic matter helps restore soil structure, improves tilth and helps plant roots get more nutrients from the soil. Use lime, fertilizers containing phosphorus and potash to get good catches of legumes.

PUBLISHED BY THE KENDRICK CO-OPERATIVE CREAMERY

HELLO, FOLKS -

About Bottles:

Ever play that game, "Button, Button, Button, Who'se Got The Button?" We'll bet that you have—but with us it's just a bit different, it's:

"Bottles, Bottles, Bottles, Who Has the Bottles?" for once again (or perhaps we should say yet) (or perhaps we should say yet) the creamery is short on milk bottles — so, to all milk bottle collections — please, folks, return your empty bottes promptly. Look around and gather all the empty bottles and have them ready for our milk delivery man. This is an urgent call, and we will sincerely appreciate your prompt co-operation.

Consider The Food You Serve:

Potlatch Chief Dairy Products make certain you have an ample supply of pasteurized milk, cottage cheese, whipping cream, ice cream and butter — for no meal, large or small, is complete without dairy products. Not only are they tempting and delicious, but they are the most healthful foods you can buy. Keep well supplied at all times.

Remember:

To keep your family healthy and happy, serve them good foods, serve them "Potlatch Chief" brand Dairy Products.

Boy: "What's the matter?" Girl Friend: "I'm on a diet and just weighed myself on one of these scales with the new speaking attachment and boy, am I mad! The darn thing said, 'One at a time, please'."

Comparison of his several blasts during the past year or so shows Mr. Molotov never at a loss for the same words.
