INTERESTING HAPPENINGS FROM THE JULIAETTA AREA

Court Of Honor Monday evening Harry Michelson of the Lewis-Clark Council, Boy Scouts of America, from Lewiston, held a Court of Honor with the Juliaetta Scout troop. After giving a talk and having the committee present awards, he showed three

reels of motion picture films. Local Scouts earning awards were as follows: Dick Mabbott, Animal Industry and Horsemanship; Alfred Boone, carpentry; Bob Bisbee, farm home and planning, public health, carpentry, reading and home repairs; Dick Bisbee, carpentry and reading; Charles Taylor, horsemanship and carpentry. First aid work was completed by Bob Bisbee, Dick Bisbee, Alfred Boone, Dick Mabbott, Harold Lindor and Charles Taylor.

Second Class Scout awards went to Jack Barclay, Donny Johns, Fred D. Johnson of Clarkston. Hadley and Elmer Lindor.

Mr. Michelsen stated that the Juliaetta troop had earned the most the immediate families of the young Grant Bateman, all of whom took awards per member of any troop in couple present. the council.

This bulldozer blade can be at tached or removed from a tractor in three minutes. The blade was salvaged from an old road scraper and the pushers are old 1.1/2 inch galvanized irrigation pipe. The U-clips which attach the pushers to the tractor are 1.1/4 or 1/2 inch flat iron which was bent into shape and welded to the pusher pipes. Braces for the frame are 1.1/4 inch pipe.

Hampshire Sow Sets New Production Mark

Ringold Lady Dora, 753,056, with the litter with which she established a new production record for the Hampshire breed. This sow is the first to have made a "Six Star" record in the Hampshire registry. She is five years old and has raised 75 pigs in eight litters. In her six star litters she has raised 62 pigs, an

average of 10.3. These pigs weighed a total of 418 pounds, 56 days after farrowing. She is owned by William C. Goodheart Jr., Eaton, Ohio. She was fed corn, oats, alfalfa and pelletized milk by-products prior to farrowing. Her pigs were raised on a ration of seven parts corn and three parts oats with 8 per cent milk by-products added.

Tests Disclose Silage Increases Hay Tonnage

Tests of haymaking methods show that considerably more tonnage of feed will be obtained from a meadow crop when it is put in a silo than can be procured by any other method of storing.

Analysis of field cured and mow cured hay and of grass silage show a larger percentage of protein in grass than in similar forage cured either in the field or in the mow.

White Pine, Big Favorite,

Offers Most Varied Uses Of all American woods none has been more significant than white pine. Nowhere else is there a wood so light that grows so tall.

Within 30 years of their arrival the Pilgrims were exporting white pine all the way to Madagascar. A single tree made a mast tall as a ship could carry, yet so light it was never topheavy. When the English navy sailed to some of its greatest victories in the 18th century, it spread its sails on masts and yards of New England white pine, says Donald Culross Peattie, in American Forests.

White pine built New England's loveliest colonial mansions and churches. A favorite of the carpenter, it works smoothly under the plane, and shrinks or swells little when properly seasoned. Fleets were launched to export white pine, railroads were bent to great stands of it, mushroom cities rose in its clearings, and it founded great fortunes. Under its boughs evolved the American lumberiack.

For toughness our pioneers turned to hickory. Not steel itself is as shock resistant. So the Norwegian ski champion wants to know that, when he takes that flying leap, his life is insured by good American hickory under his feet. As a fuel, a cord of hickory almost equals in thermal units a ton of anthracite, and epicures will have no smoked hams but those cured over green hickory coals, so subtle is their

Every American soldier, from Washington's armies to Eisenhower's, has known the feel of a native black walnut rifle stock under his palm. Under hard usage, walnut does not splinter; instead of growing rougher with handling, it becomes

Old Superstitions Thrive In Ozark Mountain Country

Down in the Ozarks many superstitions still linger and flourish. It is bad luck in these hills to remove the ashes on Sunday, and many still count the stars around the moon to learn when it is going to rain.

Many farmers in the Ozarks plant their potatoes on Good Friday, in the dark of the moon, and watermelon seeds go into the ground the first Sunday of May. Those who want big melons carry the seeds to the patch in a bushel basket.

The caw of the rain crow is a good sign of rain, and so is the croaking of the tree frog and stretching of necks and sniffing of air by horses and cattle. However, there will be dry weather if the whipporwill calls or the owl hoots in the

A bald head baby presages good, not grow fast. If the child smiles in his sleep the angels are talking to the baby and will soon take him

Perhaps water witching is the most universally believed and practiced superstition of the Ozarks. The water witch with a forked stick of hazel, willow, elm or peach tree can locate where water will be found. If the land owner will dig beneath the place where the twig points he will find water.

Plutonium Poisoning Remedy dropped at Hiroshima and Nagasaki many thousands of people who we. of plutonium poisoning, which has been a constant menace to U. S. atomic scientists. Treatment for plutonium poisoning now has been found in the use of a rare metal called zirconium, which "bumps" the radioactive plutonium out of human bodies. This treatment has been tested extensively on animals. All tests indicate that the treatment would be effective on human casualties in an atomic war, as well as on scientists who might absorb too much radioactive plutonium in the course of atomic research.

Nutrient Value of Margarine A survey conducted over a twoyear period shows that margarine fortified with Vitamin A and butter have equal nutritional value, the

sociation announced recently. The test was conducted at the University of Illinois by Dr. Anton J. Carlson, dean of American physiologists, Dr. Harry Leichenger, and Dr. George Eisenberg.

Journal of the American Medical as-

Two groups of children were observed in the study. One group, consisting of 160 children from three to 16 years who were orphans or children from broken homes, ate standard brands of margarine during the two-year period. They were given margarine on bread, in vegetables, in pastry, and in fried foods.

The butter group included 107 children of approximately the same age in another institution ten miles

Conclusions reached by the investigation indicated that there is no aparent nutritional difference when the source of supplementary table fat is margarine rather than butter. Shows Steady Increase

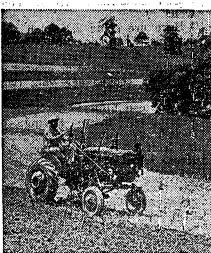

Mississippi Flood Costs Mississippi river floods during each 10 years of the last 40, a de-1947 caused crop losses reaching \$12,-242,000 in Illinois levee and drainage cates, with prospects that the recdistricts and exacted an additional toll of \$1,837,550 in property damage. Flood conditions which prevailed virtually continuously from April to July last year inundated approximately 236,000 acres.

Checking Equipment Will Pay Dividends **Tractors Need Regular** Servicing, Adjustment

Periodic checking of tractors and other farm equipment is a timely precaution that will prevent serious delays in the field, assure safer operation of machinery and make farm work easier.

Increasing the life of vital machine parts results in more units of useful production per machine and per part. This in turn means less cost per unit produced by the machine. A machine naturally wears out with

Careful inspection of tractors and other farm equipment at regular intervals will increase efficiency of the machinery.

use. However, the rate of wear may be reduced greatly by a skillful operator who is exacting in his attention to adjustments for wear and for proper and systematic lubrications.

A tractor in good repair, agricultural engineers estimate, can operate on two to three less gallons of fuel than the tractor with faulty operation. Adjustments in the carburetor, governor, timing, manifold and valves also will increase the

A careful check will disclose loose bolts and nuts as well as parts that need adjusting or replacing, thus eliminating the chance for costly breakdowns later. Every repair and adjustment should be made just as soon as the need is noted.

Farmers also are advised to equip their tractors with fire extinguishers and to provide secure holders irrigated land in the world. for grease guns or other servicing tools carried on the machine. Loose accessories may cause falls or result in a tragedy.

Hitchhiking Pests

"Hitchhiking" insects, taking advantage of the frequency and speed of modern airplane flights, offer a continual threat to areas of the nation now free from certain insect pests. A continual watch must be kept at airports in infested areas When the atom bombs were to assure that "hitchhiking" insects do not move from one part of the United States to another or leap not killed outright died subsequently easily across international boundaries via the airplane.

Last summer, inspectors of the bureau of entomology and plant

quarantine intercepted the projected flight of thousands of Japanese beetles trying to hitchhike by airplane from beetle infested airports in Washington, Baltimore, Philadelphia, New York and Newark. These beetles threatened to move into beetle free sections of the United States. United States.

Inspectors closely checked more than 7,000 airplane flights and supervised the application of a thin film of DDT from aerosols over hundreds of commercial and military planes. The beetles' favorite food plants in the immediate vicinity of the airports were sprayed, using mist blowers for the job. The summer's program was the most comprehensive ever attempted to prevent beetle spread, and yielded the largest number of interceptions for any season since this type of control work became necessary.

Production of Citrus

Production of citrus fruits in the United States has about doubled partment of agriculture report indi-

ord will continue to climb. California and Florida produce more than 90 per cent of the oranges. Florida and Texas account for 90 per cent of the grapefruit. Almost the entire commercial crop of lemons is grown in California.

Feeding Birds In Some Areas Feeding of pheasants and other

tributed grain in several critical built, and urged opposition to "any be continued as long as necessary.

Lundy mentioned the Jerome area where Russell Harris, president, and members of the Jerome Red and members of where Russell Harris, president, and members of the Jerome Rod and Gun club have the situation under control, and the effective feeding program of the Shoshone club, under direction of Floyd Silva. Similar club activity is being conducted in other counties. Members of the Kootenai County Sportsmen's association, for example, went out in a blizzard to feed birds near Worley.

Although feeding is required in some spots, the game department river program."

These and similar warnings are certainly timely. At the present time the Federal government, through the ownership of Grand Coulee, Bonne-ville and other properties, dominates the power development of the region—and local officials have to go hat in hand to Washington, D. C., when they want anything done. If the proposed Columbia River Authority were adopted, every last vestige of cery-Market.

Sparkling Water and Ginger Ale in quarts is available at Blewett's Grocery-Market.

some spots, the game department said it was not necessary in other cases even though birds are concentrated and commonly seen along roads. Under conditions of medium snow it was pointed out, waste grain is available in fields. Weed seeds provide a large amount of feed.

When snow is six inches or more deep and crusted, the birds are forced to rely on emergency food such as fruit of thorn apple, rose, burdock, teasel and choke cherry. These natural plants are used only when more desirable feed is covered and birds can exist on them only a short time without auxilliary food.

The department expressed its appreciation for feeding efforts of individuals and clubs and enlisted the aid of others as long as the severe weather continues.

A word of caution about feeding was sounded by Lundy: "Be sure to scatter the grain well back from the road," he advised. "Do not lure the birds to the highway where they will be in the path of traffic. The best method is to find a secluded spot close to natural cover. The ground should be cleared of snow before the feed is scattered."

Our Note: Evidently the fish and game department can "feed" in southern Idaho, but so far seems to have "no funds" for birds in this section — where the birds have been existing for some time on the very weed seeds mentiond in the above dispatch. As a result, the two local warehouses, the Kendrick Rochdale and the Lewiston Grain Growers have been furnishing floor sweepings and odds and ends to farmers and sportsmen for distribution in this section, and there is no doubt but that they have saved the lives of quite a number of the few birds in this area.

Fruit juices, bacon and eggs, toast and coffee for breakfast? Get the 'makin's" at Blewett's-Grocery Mar-ket, Kendrick. 1-adv ket, Kendrick.

Home Freezer Saves Time In Packing School Lunch

Getting the children off to school on time with a good packed lunch is a double duty many homemakers face five mornings a week. But if you have a home freezer this amazing device can take one of those tasks off your hands during busy morning hours.

Many good lunch-box foods, such as sandwiches, can be prepared in less busy hours, frozen and used when needed.

Most sandwiches, when properly packaged, freeze well, says Flora L. Carl, Missouri university extension nutritionist. And you can make a two weeks' supply of sandwiches at once in much less time than you can make one day's supply each morn-

Also, most last-minute preparation for buffet meals, picnics and teas is saved if you prepare and freeze sandwiches in advance.

For frozen sandwiches, use any variety and thickness of bread. Dayold bread is best. Open-face or closed sandwiches freeze equally

Here are some sandwich fillings suitable for freezing; cheddar cheese, cream cheese, sliced or ground meat, sliced or ground poultry, fish, cooked egg yolk (whites may become tough when frozen). Do not use fillings containing raw vegetables, those having hard cooked egg whites, or those containing fruit jellies. Such fillings do not freeze satisfactorily.

Fresh greens add zest to most sandwiches. Wrap fresh greens in cellophane or waxed paper and pack with the lunch to be put on the sandwich just before it is eaten. Spread butter on the bread; then the filling. Do not use mayonnaise for a sandwich spread for it separates upon freezing and soaks into the bread. Fillings for sandwiches can be frozen separately.

Electronic Range Now Used In Restaurants and Hotels

Quick-as-a-flash electronic cooking has become a reality in nearly 100 hotels and restaurants and in many factory cafeterias, where speed and perhaps novelty are important features, says the Industrial Bulletin, of Arthur D. Little, Inc. In other fields, including defrosting of cookel foods for restaurant use, large-scale defrosting of uncooked foods, quantity cooking, and home cooking, much furdevelopment is apparently

The problems and possibilities of electronic cooking are tied up with the characteristics of the electromagnetic waves through which it operates. Light, heat from a boiler, radar and radio waves are all electromagnetic waves differeng in frequency and in their effect on foods and other materials.

Light, whose waves are very short, is not suitable for cooking. Heat waves, slightly longer, will cook a steak from the outside in, giving the characteristic crust and flavor. Radar waves cook it all the way through a once, producing a different flavor and appearance. Radio waves, longest of all, generally have little effect on food, but those between the radar and radio frequencies are sometimes useful.

The electronic range now used in restaurants, called the Radarange, operates in the radar frequency, and is used in preparing, among other things, meat, fish, eggs, and even live lobsters. It will cook a ten-ounce steak in about 45 seconds and a six-pound rib roast in two minutes. Because meat cooked by the new process is gray, rather than brown, and lacks the usual crust, a unit is provided to flash-sear before cooking to obtain the desired surface appearance.

Some people find the flavor developed by electronic cooking superior to the ordinary flavor, others find it comparable, while a few feel that flavor components are not fully matured and they complain of a "steamy" taste.

Equipment cost is high- but operating cost is comparable to that of an electric stove. The 6.5-kilowatt electronic range, the restaurant size, is not sold, but leased for \$150 a month, including maintenance. Many restaurants consider its advertising value important, and feature it on menus.

Iowa Tallying Game

One thousand of Iowa's 1,400 rural mail carriers will assist the state conservation commission in determining game populations during the next year. Four surveys will be made during 1948. Under the plan the carriers who have signified their willingness to cooperate will record their observations of all pheasants, quail and cotton-tails seen while driving their routes every day for six days. At the end of the six-day period the tallies will be mailed to the biology section of the state conservation commission for compilation. The mail carrier tally is being carried out successfully in several states at the present time; however, Iowa's road system and much of the terrain of this state are "made to order" for wildlife counts by this method. The average route length is 45 miles, which means that if the anticipated 1,000 carriers cooperate voluntarily, records for 45,-000 miles of road will be tabulated each day, with a total of 270,000 miles kept during the week.

Ben Franklin Contributed To Knowledge of Farming

One of the earliest Americans to perceive that the agricultural resources of the country should not be wasted, Benjamin Franklin termed farming "the most honorable of all employments, the most useful in itself and rendering man the most in-dependent." This remarkable inventor and scientist felt that farming must be something of a business and a science as well as a way of life.

Fran! lin's work in the field of writing had perhaps the most widespread influence in directing attention of the public at that time to the value of education in agricultural science. On May 14, 1743, he published his "Proposal for promoting useful knowledge among the British plantations in America." In it he suggested the collection and dissemination of information on a great variety of scientific and practical subjects, such as the virtues and uses of new-discovered plants, herbs, trees, roots; new discoveriss in chemistry; introduction of new methods of improving the breed of useful animals; new improvements in planting, gardening and clearing land; and the nature of the soil and production of different regions.

Outstanding among Franklin's services is his introduction of new varieties of useful plants and grains. From Europe he brought Skotch kale, the kohlrabi and Swiss barley. He promoted silk culture in Pennsylvania. He introduced the yellow willow for basket making and he taught the farmers of Pennsylvania to plaster their land. From Virginia he brought the broom corn, and from China, by way of England, he brought rhubarb used in medicine, unlike the already common garden type known as pie-plant in America. Abroad his agricultural activities profited France, which learned of the Newtown Pippin while England became acquainted with fowl meadow grass. To France he also brought knowledge of various American trees, including nut-bearing trees and shrubs.

Beekeeping in California

The honeybee is not a native of California. Early records indicate that it was first imported in 1853. In March of that year, 12 hives were landed at San Francisco but only one colony was alive. This was moved to San Jose, where it cast three swarms the same season. two of these swarms were sold at auction that fall, one for \$105 and the other for \$110. By importations and natural increases, the number of colonies in Santa Clara county alone reached about 1,000 by the beginning of 1860. Beekeeping continued to expand in California to a point where, in 1873, John S. Harson, a pioneer beekeeper of the state, shipped the first carload of comb honey to Chicago. At present, approximately 12,000 individuals own some 461,000 colonies of beesan investment of several million dollars. The number of colonies maintained by each beekeeper varies from one to several thousand, with a majority of the keepers owning a comparatively small num-

Field Mouse Control

Field mice do untold damage each year to cucumber, cantaloupe, and watermelon fields by destroying the seed which have been planted and also by damaging the plants after they are up and bearing. The damage is done by meadow and pine

The meadow mouse destroys the seed after they have been planted while the pine mouse burrows into the ground, following ground mole tracks, and cuts off the plants at the ground. The destruction of plants is usually done when they have fruit varying from the early stage to fruit about ready to be harvested. The mice produce rapidly and it is estimated that from one pair a million mice are produced in one year. Two poison baits have given very satisfactory control for a number of years. One of these is strychnine-treated rolled oats. Another bait, which can be prepared at home, is made by using one-fourth ounce strychnine sulfate, one pint syrup, and one pint water. The mixture is brought to a boil and allowed to cool after which two or three saccharine tablets are added. The poisoned syrup is used on old melon, cucumber, or cantaloupe seed, grain, chicken feed, peanuts, or small cubes of cheese. The above mixture makes a sufficient amount of poison syrup to treat six or eight quarts of bait, depending upon the kind of bait used.

Pipe-Smoking, Old Custom Use of the pipe in America is of highly decorative pipes are found in the Mississippi valley and in Mexico, indicating that pipe-smoking Spoilage of Stored Grain was prevalent in the pre-Columbian era. In Great Britain and Ireland. small clay pipes are often dug up. Lane, first governor of Virginia.

Wheat Yield Boosted Through Fertilization Gains in Indiana Tests **Exceed Seven Bushels**

Fertilizing wheat paid dividends in crop increases averaging seven to nine and one-half bushels per acre, Purdue university research men revealed in announcing results of 1947 studies conducted in 15 Indiana counties.

Wheat yields increased seven bushels per acre when fertilizer applications averaged from 150 to 200 pounds per acre. When the plant food treatment was boosted to 300 to 400 pounds per acre, average production gains of nine and one - half bushels were obtained.

with wheat started on various soil types last fall showed somewhat similar results, according to the Purdue research men. When 165 pounds of O-12-12 was applied on six southern Indiana upland soils, increases of five bushels per acre resulted. When the application was doubled, yield increases

Demonstrations

averaged seven bushels per acre. Applications of 300 to 350 pounds 3-12-12 are being recommended for wheat on practically all upland silt or clay loam soils and for sandy loams," says a statement by the Purdue agronomy department. "If the 3-12-12 cannot be obtained, then 2-12-6 is a good substitute for the wheat crop itself. The additional potash in the 3-12-12. however, is especially important for the clover and corn crops following the small grain.'

Machinery Is Revamping Farming in Cotton Belt

Nearly a million tractors today are in action on farms in the 18 cotton-producing states, saving time and labor in nearly every phase of cotton production. The invasion of machinery into the South's white cotton fields is eliminating the back-breaking task of producing the cotton crop.

Man's mechanical helpers achieve in a few hours what formerly took days of costly human labor. For example, the flame cultivator, attached to a tractor, removes grass and weeds from the field at onetenth the former cost.

An experiment in the coastal plains area of North Carolina showed that while 118 man hours are required to produce an acre of cotton by the old man-mule methods, use of two-row tractor equipment, mechanical choppers, flame cultivators and machine pickers cuts the man-hour requirements to 19.7 per acre.

Machines capable of harvesting a bale of cotton in slightly more than an hour are now a reality instead of a remote possibility. While the average hand-picker gathers about 15 pounds of seed cotton an hour, a single mechanical picker in the same field harvests about 1,500 pounds in 2 hours, 20 minutes. Thus, the mechanical harvester accomplishes the work of 40 to 50 human pickers.

Internal Parasites Loot Farmers of Huge Toll

Few criminals ever dream of committing a 125 million dollar robbery. But that's the amount internal parasites steal from the U.S. livestock industry every year. Because the parasites are hidden, the farmer never will see the thieves at work. However, they keep right on causing losses day and night.

Parasites cause diseased animals and poultry to eat more grain and other feeds than healthy stock eat. They stunt the growth of young animals and sometimes kill them. Affected animals generally bring lower prices when shipped to market.

Internal parasites can be con-trolled. Phenothiazine, carbon tetrachloride, hexachlorethane, sodium unknown duration. According to the fluoride and carbon disulfide are Encyclopedia Britannica, the most used to fight certain types of paraancient American pipes are found in sites. PUBLISHED BY THE KENDRICK CO-OPERATIVE CREAMERY

HELLO, THERE FOLKS:

About Food: These severely cold days you should make doubly certain that those children of your are properly fed. Pasteurized Milk contains more body building products than any other food, so keep plenty on hand to serve those hungry youngsters. After strenuous coasting parties children need good, wholesome, nourishing foods. Serve them hot chocolate made with Potlatch Chief Pasteurized Milk and watch their eyes light up with delight.

About Calendars:

If your haven't received your Creamery Calendar yet, come in and call for it the first time you are in town.

Don't Let It Freeze - Please!

All cream patrons are urged to keep their cream from freezing. Frozen cream is very inconvenient to handle — it has a tendency to separate and lower the test, and it also makes a low quality butter. Both of us will be ahead if you keep it from freezing. Be Sure To Take It In:

Please watch for our dileveryman, Ward Helton, here in town, and take that milk into the house as soon as he delivers it - for frozen milk loses a certain percentage of its fine flavor after thawing. The kids may like frozen milk — but then, too, bottle may be broken.

The name "Potlatch Chief" is your assurance of quality.

Think!

Juantity

WHEN BUYING CANNED GOODS OF ALL KINDS, AS WELL AS FRESH VEGETABLES AND FRESH AND CURED MEATS

Throughout our years of business in Kendrick our aim has always been to give the highest possible values in any item — and it is still our aim for 1949.

On our shelves will be found the standard and well known brands of canned goods.

In our fresh frozen foods case we feature

"Birds Eye" brand, which we believe to be without a peer.

On our meat block will be found choice fresh and cured meats from Carsten's and Bristols packing companies.

For Better Values — Try Us

PLEASE CALL — For your 1949 Calendar. We have two models, regular or appointment.
