KENDRICK GAZETTE

KENDRICK, LATAH COUNTY, IDAHO, THURSDAY NOVEMBER 1, 1951

PERSONALS AND NEWS ABOUT KENRRICK FRIENDS

Mrs. Howard Probstfield and four sons of Spokane visited at the home of her sister and husband, Mr. and Mrs. Ernest Freytag, over the week-

Mr. and Mrs. Chas. Blanchard and daughter Audrey from Elgin, Ill., were over-night guests of Mr. and Mrs. M. R. Vincent. Mrs. Blanchard is a cousin of Mrs. Vincent.

Mr. and Mrs. M. R. Vincent were Thursday evening callers in the Wil-

bur Tarbert home. Mr. and Mrs. Wade T. Keene were in town Friday to see their new granddaughter, Katie Keene, at the Davidson Nursing Home. Mr. and Mrs. Elmer Hudson spent

the week-end at their home here. He is employed at the Lewiston mill. Mr. and Mrs. Paul Hall, Troy, were transacting business and visiting with

friends in Kendrick Saturday. Audrey Beck, Southwick, who is attending the U. of I., spent the week-

end at her home in Southwick.
Gust. Dahlgren, Seattle, writes us a brief note saying he is feelig very well and enjoys the Gazette, but would enjoy some personal letters from old friends.

Mr. and Mrs. Edgar Dammarell have received word from their son, Pfc. Frank Dammarell, that he is now stationed at Camp Pendleton, Oceanside, Calif, where he is receiving advanced infantry training.

Word has been received from Mr. and Mrs. Carl Finke, former Southwick residents, that they have moved from their logging camp near Ahsahka to Orofino, Route 2.

Word has been received from Mr. and Mrs. Walter Zimmerman, that they have moved from Dayton, Wash., to Spokane, where he is now employed.

Mr. and Mrs. C. E. Rudd of Tacoma arrived here last week for a visit with their daughter, Mrs. Bob Magnuson and family. Mrs. Kenneth Brocke of Troy spent

last Thursday here transacting business and visiting with friends. Mr. and Mrs. Bob Watts and daughter Patty left Sunday for Coeur

d'Alene to visit her parents and her brother, who is home from army service on an 18-day furlough. Mrs. W. B. Deobald drove to Pullman Saturday morning to visit her son, Mr. and Mrs. W. A. Deebald and

daughter. All returned here Saturday evening, to remain over Sunday. Mrs. Liddie Ameling returned Friday from Tacoma, where she had spent the past three months in the per daughter, Mrs. Ward Howell and family. She brings word that Ward, who suffered a severe heart attack in the summer, and who has been hospitalized for some time in now improved, and at his home,

where he is recuperating slowly. Mrs. John Johanson returned Friday from Portland where she had been the past two weeks caring for her grandchildren, while their parents, Mr. and Mrs. Donald Lehman were vacationing in Florida and other

points in the east and south. Mr. and Mrs. Ollis Sherbon of Pullman and Mrs. Jack Maynard of Lewiston were in town Sunday visiting in the home of their father, A. W. Jones and son Bernard. They also called to see Mrs. Ronald Jones and new baby son.

Wallace Fraser, who is employed at Avery, spent the week-end here with his parents, Mr. and Mrs. Everett Fraser.

Bob Lind spent the week-end in Moscow at the home of his borther, Mr. and Mrs. Leon Lind and family. Mrs. Eyerett Blackburn of Cavendish spent Tuesday visiting in the home of Mrs. Paul Lind and family. Little Eloise Israel is spending a

few days here with her grandparents, Mr. and Mrs. Hiram Galloway. while her parents are at Ephrata, preparing to move to that section. Mr. and Mrs. Thomas Brown and

baby daughter of Spokane were weekend visitors in the homes of their parents, Emulus Brown and Harry Mrs. D. A. Christensen attended a

Home Demonstration Council meeting in Moscow, Tuesday. Dick McCall is taking his vacation

at this time, Mrs. Rowden is taking his place in Blewett's Grocery. Mr. and Mrs. Ross Armitage and family spent the week-end at Stites with her brother and family, Mr.

and Mrs. Nelson Blewett. Mr. and Mrs. Frank Abrams and Tuesday morning, taking Mrs. Abram's sister, Mrs. Wm. Truemper and two children home, following a

month's visit here in their home. Mr. and Mrs. Geo. Brocke, Sr., took Mrs. Brocke's mother, Mrs. Fred Rennick, to her home in Lind, Wash., on Sunday. Mr. and Mrs. Jack Kuykendall accompanied them as far as Sprague, where they stopped to visit her daughter and son-

in-law, Mr. and Mrs. Preston. All returned here Sunday evening. Mrs. Preston and little son accompanied them home in visit in the Kuykendall home for a time.

Mr. and Mrs. Bill Henley and Mr. and Mrs. Roy Wood and three children, all of Moscow, were Saturday guests of Mr. and Mrs. Ervin Mc-Geachy. Other guests over Saturday and Sunday were Mr. and Mrs. Hilmer Malm and two children of Priest

Mr. and Mrs. James Lyle, Moscow, were in town visiting old friends for

a short time. Mr. and Mrs. Walter Brocke left Monday for Seattle, where they will visit in the home of her sister, Mrs.

Motorists are again asked to please (Continued On Page 2)

Weather Typically Fall This past week we have had a real assortment of fall weather ranging all the way from rain and wind to beautiful sunshine.

Sunday was one of the most beautiful fall days anyone could wish. Bright sunshine prevailed all day, and yet there was a "nip" in the air that let you know it was fall.

Farmers, many of whom still have plowing or seeding to do, are longing for more sunshine and warmth, to finish that fall work.

Cattlemen, too, would appreciate a bit more sunshine, as pastures are beginning to green again in fine

WHAT HAPPENED HERE AG0 TWENTY YEARS

Mrs. D. A. Christensen and baby son arrived Thursday of last week from Salt Lake City, Utah, to join her husband, Dr. D. A. Christensen, who recently located in Kendrick to practice medicine. The good people of Kendrick extend to Dr. and Mrs. D. A. Christensen a hand of wel-

Mrs. Edgar Long left last Wednesday for Spokane to spend several days visiting relatives.

Miss Margaret Taylor of Juliaetta spent the week-end visiting with Al-

Campfire Girls Have Party - The Campfire Girls had a Hallowe'en party in the basement of the Presbyterian Church Friday evening. The girls decorated the rooms with fall leaves and an enjoyable time was extra point. had playing games, which were followed by delicious refreshments. Those present were Margaret Taylor, Ethel Cummings, Annabel and Josephine Davis, Elizabeth Carlson, Mildred Kite, Phyllis Thomas, Marjorie Onstott, Lizzie Hoffman and Nettie Mae McDowell, and teachers, Miss Deagen, Miss Ferguson, Miss Davidson, Mrs. Adams and Mrs. Silvie Cook.

Hunters Bring Back Lots of Game — Everett, Kenneth and Elmer Fraser brought out a fine deer each from the Getney Creek section where they were hunting. -Grant Bateman killed an elk a mile below Fog mountain. — Ed. Deobald and family returned from Salmon this Thursday. Eddie had a fine time hunting with Ralph Knepper, both getting their deer.

An ad, eppearing for the Barnum Lumber Co., lists shotgun shells at \$1.00 a box. — The Kendrick Theater lists admissions as 10c and 35c, and the "whole family" for \$1.00.

Football Casulty List — Dark

clouds of despair hovered over the Kendrick High School last week on account of the large "hospital list" of the football team. Ernest Schwarz limped conspicuously about on a lame leg; Edwin Mielke was often seen gingerly feeling a broken nose, while Walter Koepp made several trips to the dentist to get a repair job on three chipped teeth; Wm. Holt turns his head neither to the right or the left because of an injury to

Cameron—Saturday evening at the parsonage of The Trinity Lutheran Church in Lewiston, Miss Margaret Hund of Kendrick and Walter Silflow of Cameron were united in marriage. The Rev. W. J. Schwarz officiating. Attending the services were doughnuts will be served. Mr. and Mrs. Vern Kalbfleish of Lewiston, who acted as best man and briedesmaid. Mrs. Kalbfleish is a cousin of the bride. Wegner and family, Mr. and Mrs. Gus Kruger and family, Mr. and Mrs. Henry Wendt and family and Herman and Paul Silflow.

Answer To Subscription Notice One of our subscribers, who name we shall withhold, writes us a very chiding note on our subscription no-

tice, as follows: "Bill, I thought you were a better business man than this! Why didn't son Richard left for Bremerton, Wn., you catch up with us before? My face other "off timing." is really red! I hope you don't think we make a practice of doing this not known, but occurred on a feeder

Here are the "bear facts." We were enjoying the Gazette all the time at what we thought was my folks expense. Mother gave us the subscription as a gift a long time ago and it just kept coming and we kept enjoying it, never dreaming that the subscription had run out.

Don't be backward about sending us a statement next time, as we catch them all up the 10th of every month and fully expect a "pile of them."

Witches And Ghosts Parade

Tonight's the night (Wednesday) for Kendrick's "small fry" to model Bob Lind sang a solo between mediwhat the well-dressed "spook" will or should wear.

At 7:00 p. m. the "Hobgoblin" par-ade will start from the Community share with the local group. Registrachurch, wending its way through town and back, where all the children will be served treats in the church basement by the Sunday School teachers. Also, prizes will be awarded for the best "get ups."

drive carefully and watch out for the little children.

SHORT NEWS ITEMS FROM OUR LOCAL SCHOOLHOUSE

Date Has Been Changed The date of the School Carnival has been changed to November 16 to avoid conflicts which presented themselves as of November 9, the original date scheduled.

It is our desire to avoid conflicts with other organizations as much as possible in scheduling our school activities. Sometimes conflicts are unavoidable, and in such cases little can be done. We appreciate the way various organizations have conferred with the school on scheduling activities. In this way all persons concerned have a better chance to attend functions.

Class Rings Arrive Last week the Seniors received their class rings, ordered last year. Some rings are set upon multi-colored stones; others are set upon platinum. All of them are crowned with a large "K" letter, with Kendrick written in small letters on the edge of the set. The owners initials are inscribed inside the ring itself.

Kendrick Loses To Potlatch

Last Friday night, in a night game on the Potlatch field, the Kendrick Tigers were defeated by Potlatch

20 to 0. At the close of the first period the score stood 0-0, but Potlatch came back strong in the second quarter to score two touchdowns, complete with extra points.

After the half-time Potlatch scored once more, but failed to tally the There was no scoring in the fourth

quarter, and the contest ended 20-0. Next Friday Kendrick plays Troy at Troy at 1:30 p. m. Tentative Basketball Schedule

Coach Dennis Racicot announces the following tentative basketball schedule:

December 4: Open
December 7: Asotin, there.
December 8: Grangeville here. December 11: Troy, here. December 14: Kamiah, there. December 18: Culdesac, there December 21: Genesee, here. December 28: Asotin, here. January 4: Winchester, here. January 8: Troy, there. December 11: Orofino, there. January 15: Deary, here. January 18: Grangeville, there. January 22: Lapwai, there. January 25: Culdesac, here. January 29: Lapwai, here. February 1: Winchester, there. February 5: Genesee, there. February 8: Kamiah, here. February 12: Orofino, here.

February 15: Reubens, here. Eighth Grade News As the outcome of a poster drawing contest in History, Charles Havens took first prize of 15c; Roger Christensen, 2nd, and Kaye Abrams,

INTERESTING HAPPENINGS IN THE LINDEN AREA

On Wednesday the W. M. A. met again with Mrs. Louis Alexander for an all-day quilting bee. They also decided on a "Spagnetti and Meat Balls" main dish for their supper, which will precede the sale on November 9th. There will be a modest charge for school age and over, but no charge for children below school

We greatly appreciate the courtesy of Mr. Nutting and the Kendrick school in changing the date for their carnival, so as to leave Nov. 9th for us. Several from here wish to at tend both.

Mrs. Lester Weaver returned on Thursday from Lewiston where she had spent several days with her son Theodore and family. She reports the

twins as doing quite well.

Mr. and Mrs. Arlie Allen went up to Steptoe Butte, Thursday. It was a beautiful day and the view from the top in every direction was mag-nificent. Mrs. Allen said there was a photographer there that day taking colored pictures of Washington, to be shown on the screen, and he told them that the sunlight and shadows were perfect for picture taking that day.
Lester Weaver received a tele-

gram last Thursday informing him of the death of Mother Cooper in Pennsylvania. He was unable to attend the funeral, which was held on Mrs. Aug. F. Wegner and sons Vern Wednesday. Mrs. Weaver also received word last week that her stepmother, in California, had undergone a major operation, the seriousness of which she was not advised.

Mrs. Perryman and her Gold Hill group of school children presented a Rev. and Mrs. Meske and the memgram on Friday evening to an appreciative audience. Afterward, pies were auctioned off by Clarence Weaver. Regardless of Mrs. Perryman's wish to keep the cost of cach risk ways business at a Hallowe'en party of the Gifford Luther League at Gifford, Sunday evening.

Not Too Many Get Chinks

Although Chinese pheasants are said to be far more plentiful than usual this fall, we have heard of but few locally who succeeded in bagging their limit. Most complain that hey were unable to get within range of those wiley roosters, and longed for 37-mm. anti-aircraft guns instead of the trusty "blunderbuss."

Perhaps the fact that grouse season gave an opportunity for many gunners to take to the field and fire a few shots put those wiley Chinks on their guard, but, be that, as it may, but few local nimrods brought home the limit.

GRAIN MARKETS SHOW BUT VERY SLIGHT PRICE RISE

Grain markets, with the exception of barley, showed little change during the past week, according to reports to the Market News Service by the U. S. Department of Agriculture. Spring bread wheat made some slight gains but durum and winter wheats remained practically unchanged following the recent sharp gains. Oats advanced about 1c and barley gained 5 cents, continuing the upward trend of recent weeks.

Stocks of wheat in all positions at the 1st of October (latest available figures) were estimated at 1,126,791,-000 bushels, or about 80 million bushels less than a year ago. Disappearance of wheat since July 1 is estimated at about 263 million bushels compared with 247 million for the July-September quarter of 1950. However, this is the smallest disappearance for that quarter, with the ex-

ception of 1950, since 1942. Marketings of wheat continued to decrease with arrivals at primary markets totaling only 9,750,000 bushels. Domestic inquiry was less active than in recent weeks but export demand continued active, with sales under the International Wheat Agreement totaling over 8 million spections for export during the week amounted to nearly 8 million bushels and brought the total since July to a little over 120 million bushels.

Cash wheat prices ranged from unchanged to slightly higher following the sharp advance of the previous week. No. 2 hard winter wheat held unchanged at \$2,51 at Chicago; \$2.66

with prices averaging about 1c higher for the week. Continued firmness in local markets was largely attributed to the continued active demand from exporters. Sales of five cargoes of white wheat were reported made to India under the International wheat agreement. There were also reports of selling to Japanese grain firms who were reportedly making tender of around 200,000 tons of U. S. wheat to the food ministry early next week. Flour mills continued to take moderate supplies of special protein lots. Prices on export types

were steady. Receipts of wheat at Pacific Northwest terminals increased to 980 cars the past week, compared with 864 a week ago and 973 the same week Mr. and Mrs. August Sielaff and last year. Export demand was active Mr. and Mrs. Paul Teske of Ritzearly in the week. As a result prices ville, Wash., were guests of Rev. and made moderate gains and reached the highest point since January of 1948, but country marketings increased at the high point and prices eased very slightly, but at the close were unchanged to a half cent higher than a week earlier. At the close of the market No: 1 soft white and white club were quoted at \$2.42 per bushel; No. 1 hard red winter at \$2.42 and No. 1 hard white Baart at \$2.47 per bushel, all coast delivery, track basis, Port-

> At San Francisco wheat prices advanced 3c per bushel with California No. 1 being quoted at \$2.46 to \$2.49 per bushel, delivered.

The oats and barley markets were independently firm, but oats prices advanced only about 1c per bushel Mr. and Mrs. Fred Newman and while barley was up 5c to 6c. About 1,500,000 bushels of oats were receivweek and offerings were about equal to current trade needs. Stocks of oats in all positions at the first of October were about 20 million bushels short of a year ago.

Pacific Northwest oats markets were strong, reflecting the scarce offerings and a good buying interest. California buyers continued as an excellent outlet for supplies, but offerings remained short. Prices advanced \$2.50 to \$4.00 per ton, with No. 2 bright white oats, 38 lbs. or better test bringing as high as \$70.00 per ton at Portland. Receipts this last week totaled 27 cars against 53 for last week and 55 for a year ago.

Pacific Northwest barley markets continued to strengthen with light offerings of good feed barley meeting a strong buying interest. Prices delivered coast for the same grade. machinery, horse-drawn machinery, and a good feeder demand continued

to prevail. Malting barley prices held steady ers while Willamette valley supplies were bid at unchanged values.

Bank Statement Shows Gain

Lewiston, Oct. 30— If Lewiston home Saturday, after spending the city councilmen have their way the past week with Mr. Fry's mother, days of cattle drives through Lewiston's main streets will be gone forever. At the council meeting last night the governing body heard Po-lice Chief Robert O. Flood tell how such a drive early yesterday had damaged the park area which sur-

rounds the new Memorial bridge. Councilman Lee McPherson made a motion that the city file a damage suit against the people who drove the cattle through Lewiston yester-day morning without a permit. Mc-Pherson also recommended the writing of a new ordinance to replace the

now obsolete one which allows the downtown passage of livestock.

Our Note: We doubt they can prohibit cattle drives, but the owners can be made to pay for damage sustained by property owners. tained by property owners — some of which has occurred in Kendrick.

Fishing Season Over
The state fish and game department reminded sportsmen that the Idaho general fishing season ended the evening of October 31. Certain waters, will, of course, remain open to year-around fishing, and lakes in the five most northern counties will be open for trout until November 30.

Department field men reported that overall fishing results were good during the season just completed, with more limits and improved results on most streams and lakes.

Cannot Kill Hen Pheasants Hunters were reminded that hen pheasants are protected again this season. Two roosters constitutes a daily and possession limit. Head, feet, and feathers necessary to establish sex and species must be left on birds

Kendrick W. S. C. S. Sale-Dinner Remember, Thursday, Nov. 8, and keep it open. The Kendrick W. S. C. S. will hold their annual dinner and bazaar in the Community Church besement, Kendrick, that evening. Serving will begin at 5:30 p. m. As a side interest there will be a "fish pond" for the children, and a

"grab box," with hidden "treasures" for all. Dinner 50c and \$1.00 per plate

Next On The Agenda--

Is Thanksgiving!

Yes, THANKSGIVING — That typically American Day, is the next holiday to appear on the American Holiday Calendar.

And it's just as typical to think of the home town as it is think of Thanksgiving.

Thoughts of this holiday bring on thoughts of home—and the home town. So don't fight that feeling—just ease it by doing your trading, all of it, in Kendrick — the old home town!

You'll find local business men and merchants ready to serve you at all times with quality items at reasonable prices, and when you buy from the merchant who knows you and your needs you are assured of satisfaction in personal service as well as goods purchased.

Aesop is supposed to have said: "Where ignorance is bliss, 'tis folly to be wise."

Had that saying been followed through we would not have today our great national holidays, our fine modern stores — or be the great nation we are today so if you are one who has not tried making Kendrick your business center — try it now. You will find the old home town just can't be beat!

We are prompted to sponsor the above advertisement through our desire to serve the best interests of our community in every way possible.

Adrenal Gland Plays Role When One Suffers Injuries

Another step forward in better understanding the important role played by the adrenal gland in helping the body recover from injuries has been achieved, a University of

Michigan doctor states.
Dr. Jerome W. Conn, an associate professor of internal medicine, reported to the American Association for the Advancement of Science on research he has been conducting at the university.

His study has shown that the ad-

renal gland calls upon a substance in the blood known as cholesterol to help in producing the huge amounts of adrenal hormones needed in prolonged periods of stress which the body undergoes at the time of an in-

Cholesterol, produced largely by the liver, is the basic compound of adrenal hormones, including cortisone, the hormone found to be beneficial in the treatment of rheumatoid arthitis, Dr. Conn says.

In his experiments, Dr. Conn found the cholesterol content of the adrenal gland could be reduced 70 per cent within three hours by artificial stimulation which produced conditions similar to those created within the body during periods of prolonged stress.

This artificial stimulation was achieved through use of ACTH, the pituitary gland hormone which causes the adrenal gland to produce its hormones.

The effect of this prolonged stimulation of the adrenal gland has important implications for future study of several diseases, including those of the heart, liver and kidney as well as hardening of the arteries, according to Dr. Conn. These diseases are all associated with an unusual production or use of choles-

Wool Scarce; Give Blankets Extra Care for Longer Life

Treat your wool blankets with the gentle care that precious possessions deserve. Textile scientists of the U.S. department of agriculture have pointed out that U.S. production of wool this year is one of the lowest on record.

Frequent airing of blankets in use not only is good sanitary practice but helps them last longer and hold their fluffy warmth and comfort. When a blanket is thrown back loosely so fresh air reaches both sides, the wool has a chance to get back its natural springiness which makes for warmth. But care should be taken not to throw a blanket over anything sharp, such as a peaked bedpost, which may pierce or pull it, or on anything that may stain it. Loose bed springs, sharp metal corners or even roughened wood may also catch and tear

blankets should be large enough to come up well over shoulders and still tuck firmly in the bottom of the bed. Short blankets often wear out early because they take so much pulling and strain.

A blanket stays clean longer if the bed is made so that the sheet turns back over the top of the blank-et 8 to 12 inches. If the sheet is too short, a strip of cloth, basted over the top or the full length of the blanket, is good protection against soiling the wool. A covering over the blanket, or even a third sheet used on top, gives added warmth because it holds still air in the fluffy wool.

For Pig Protection A pair of clean rubber boots is worth more than any medicine in protecting pigs from a fatal intestinal disease called transmissible gastroenteritis. Best means of controlling it is to move healthy pigs as far away as possible from the sick ones. Many farmers do this, a veterinary medical bulletin points out, but they overlook the fact that their shoes can spread the infection. Attendants who have walked through infected hog quarters should put on a pair of clean boots before entering healthy quarters, the bulletin cautions. The disease, believed to be caused by a virus, is marked by severe diarrhea, vomiting, and rapid loss of weight. Young pigs are hit hardest, with death losses sometimes running as high as 90 per cent.

The term "industrial-finishes" is applied to the finishes used by manufacturers to enhance their products. Before being applied, they are subjected to many special

Finishes Pre-Tested

tests based upon the kind of usage to which the article may be subjected. For example, in addition to tests for adhesion, and hardness, finishes for refrigerators, stoves and kitchen cabinets are tested for their resistance to various foods, such as lemon juice, butter, lard and vinegar—as well as to various

cleaning materials.

Wooden, Aluminum, Ladders

The rung of a wooden ladder will bend downward about one-sixth of an inch for a 150-pound person stepping on its center. An aluminum ladder is constructed so that the deflection is much less. If it were built like the wooden ladder, the deflection of the aluminum rung would be about a ninth as much as for the wooden rung under similar conditions. This is because aluminum is nine times as rigid as wood (white oak).

Ask for More Trained Men For Animal Disease Study

Solution to some of the nation's most costly animal disease is being slowed by lack of highly trained research men.

There is urgent need for giving promising young scientists an opportunity to learn the techniques of animal disease investigation.

The only way this can be done is by a long range fellowship pro-

Such a program has been spon-sored by the AVMA for the past six years. Under this program, which will be expanded as funds permit, research-minded graduates of colleges of veterinary medicine get financial aid to engage in animal disease studies at leading scientific institutions. This gives them background and experience needed for unraveling highly complex dis-

Many livestock and pet owners who ask for "more research to solve disease problems" have given too little thought to how the job might

Finding out what causes a perplexing animal disease isn't much different from tracking down a

dangerous criminal, and neither is a job for anyone but a well-trained person. The Federal Bureau of Investigation would not put a man on any of its cases without first training him

in FBI methods. The same advantage should be given to people interested in disease investigation. Funds for expanding the fellowship project should come from private sources rather than the federal government "because the na-

tion already has gone too far toward

dependence on federal hand-outs."

Mastitis Germs Live 5 Days on Broomstick

Harmless though it may look, that broom in the corner of the barn might be the means of starting a new case of bovine mastitis.

The germ responsible for most cases of bovine mastitis can stay alive for as long as 20 days on objects around the barn, and for as long as 26 days anywhere on a cow's skin. From these jumping - of places, the germ can eventually get into a cow's udder, where it starts the disease known as mas-

Survival time of the germ was observed after mastitis-infected milk was poured on manure, hair, wood, bricks, udder cloths, and other materials commonly found or used around dairy barns.

The germ stayed alive for 4 days on rubber boots, 5 days on a broom handle, 7 days on an udder-washing cloth, 8 days on a bucket, 13 days on hair, and 20 days on hay. However, when some of these objects were treated with a disinfectant before being smeared with infected For best service and comfort milk, the germ didn't do so well. Enough of the disinfectant lingered to cut down the survival time to a day or less.

This research emphasizes the need for clean barns, clean cows, clean attendants, and prompt disinfection of any object that gets splattered with milk.

Use of Columbium

John Winthrop, Jr., who supervised the construction of America's first successful blast furnace at Saugus, Massachusetts, in 1643, found an unidentified rock fragment near his home. About 150 years later, an English chemist, Charles Hackett, saw this fragment in the British museum, analyzed it, and thus discovered the element columbium. Today, this element is playing an increasingly important part in the manufacture of stainless and heat resistant steels for such

uses as jet aircraft engines. Columbium is one of the most recent elements to find use in the steel industry. It was used commercially as an alloy in the 1930's, although experimental work had been done with it as early as 1920. Last year 632,000 pounds of columbium metal was consumed in the manufacture of steel.

Origin of Camouflage The origin of the word camou-

flage has, it seems, been lost in the shuffle. One of the stories told in connection with it is that, during the Indian troubles in the Southwest, one Jacques Camou built a circular mud fort. This fort had large square openings at regular intervals around the walls. Through these, the garrison of the fort would fire. As the Indians' shots also found their mark through these openings, Camou painted the entire fort like a checkerboardwith large black squares on a white field. This confused the Indians so they were unable to determine at which dark squares to aim.

Thermal Snow Removal Thermal snow removal from side-

walks and driveways by means of embedded piping is a new and interesting development in the heating industry. The snow is removed automatically and without effort by the heat from pipe coils installed under the surface of the pavement. Hot water, circulated through the coils, transfers its heat to the pavement, thus melting the snow and keeping the surface dry. Automatic snow removal is economical. There is no necessity for using snow shovels or chemicals. All the owner does is to turn the switch to start the system in operation when the snow begins

Modern Dentistry Can Aid Youth with Cleft Palate

The role of modern dentistry in the total rehabilitation of young men and women with cleft lip or cleft palate so they can lead happy useful lives is revealed in the Journal of the American dental associa-

Asserting that more children are born with this condition than any other congenital deformity, Dr. Herbert K. Cooper, director of the Lancaster, Pa., cleft plate clinic, estimated that at least one out of every 700 children have this handi-

"The most frequently found condition has been getting the least amount of attention," he said. "The citizens of this country should be as well informed on the subject of cleft palate as they are on polio-myelities, cerebral palsy and rheumatic fever."

Citing cases of patients treated at the clinic, Dr. Cooper told of a youth, 17, born with a cleft lip and cleft palate. During infancy, surgery had been performed, leaving him with a flat upper lip and very poor speech.

"He shunned all social contacts,"
Dr. Cooper said. "He left high school and was driving a truck. His

whole family was extremely upset." Dr. Cooper said the youth was given a medical, dental, speech and psychological examination. An appliance was constructed to build out the upper lip and cheeks and thimble crowns were placed on his five remaining upper teeth. At the same time, he was given speech instruction.

The boy was persuaded to finish high school, Dr. Cooper said, and he then was admitted to col-

lege. He added: "The first two years were quite difficult for him because of his social adjustment problem, which he gradually overcame. Then he was taken into a fraternity and was graduated on the dean's list. He is now attending law school in a large university."

U.S. Still Leads World In Production of Matches

It's pretty difficult to get some-thing for nothing these days, but there's one item left that is used by the average person 14 times a day, and two out of five times he doesn't have to pay. That little item is the match.

The manufacture of matches is a \$25 millon-a-year industry in the United States. Each year, more than 500 billion matches are produced, and of 200 billion book matches made in the United States every year, about 196 billion are given away with the sale of cigars, rigarettes, and tobacco.

Sweden had us topped for many years in the production of matches. The Swedish Match Company, formed in 1913 by Ivar Kruegar, had match factories in 43 countries of the world and manufactured most of the world's matches. Kruegar is said to have invented the common superstition that "three on a match" is unlucky, in order to sell more matches. His match empire lasted until 1932, when it was discovered he'd been using the company's capital for his own speculations.

Sweden now ranks fourth down the line led by the United States. Great Britain ranks second and the Soviet Union third.

Spices in History

There are many references to spices and herbs in the pages of history. They play important parts in the development of our civilization. The ancients attributed strange powers and accomplishments to spices. Basil, for example, is venerated by the Hindus who plant it outside their temples and homes to insure happiness. The famed laurel wreaths which crowned Greek heroes of war and sport are the same bay leaves we use today in our cooking.

Freezing of Water Pipes Freezing is most likely to occur

in pipes which run along an outside wall. This hazard should be corercted by re-location of the pipes, if possible. If this is impractical, thorough insulation with from two and one-half to three inches of good pipe covering is the only safeguard. Should any of the piping freeze, the work of thawing it should not be entrusted to a handyman. It should be done under the supervision of an experienced master plumber. Blow torches or other methods involving open flames are extremely dangerous. They not only involve fire hazards but also permit the generation of high pressures which may cause

Gregorian Calendar The form of our present calendar

was set by Julius Caesar with some additional innovations by Augustus Caesar. However, in about 1500 years the length of year adopted by the Caesars proved incorrect. Therefore, Pope Gregory, in 1582, appointed a commission which revised the calendar sufficiently to bring it back in step with the seasons. Now it takes 3000 years for the calendar to slip out of line one day. The Protestant countries did not accept the Gregorian calendar until 1732 and this is why certain dates in history sometimes appear to be confused.

Helium Effect on Living Organism Reported at U.C.

Helium, argon and possibly other inert gases—gases which do not combine chemically with other elements—are far from inert in their effect on living organisms.

This is reported by Dr. S. F. Cook, professor of physiology in the University of California school for medicine.

Dr. Cook has completed experiments in which he studied the reactions of small animals living in an artificial atmosphere consisting of oxygen and helium or of oxygen and argon.

The artificial atmosphere contained the same amount of oxygen found in the normal earth's atmosphere-about 20 per cent. But nitrogen, which forms nearly all of the remaining 80 per cent of the earth's atmosphere, was removed and the inert gas substituted in this same proportion. The ordinary atmospheric pressure of sea level was maintained.

When helium was used in such an atmosphere, the physiological processes of mealworms, lizards and mice were markedly changed. Similar, but less marked, changes were observed when argon was used.

The principle effects of the two gases were retardation of growth in the animals and an increase in the metabolic rate—a stepping up of the pace of work done by the body in the living process.

The research indicates that it may be useful to substitute helium for nitrogen in air used by men working in some tunnels, underwater construction projects, and some other conditions of high pres-

Hard Pad Canine Disease Gives Dog Owners Scare

A serious distemper-like infection that leads to hardening of the foot pads and nose is being seen in American dogs, but there is no evidence that it is a new disease or that it is becoming more prevalent. Alarming reports from England, where the so-called hard pad condition is reported to be widespread, have made many United States dog lovers overly fearful of the disease.

Thickening, hardening, and peeling of the foot pads and nose sometimes occur in advanced stages of distemper or distemper-like illness, but this condition always is seen in company with other symptomsnever alone.

Among theories as to the cause

(1) The canine distemper virus may undergo a change, under certain conditions, that causes it to produce symptoms that differ from those seen in typical distemper cases. "Hard pad" may be one of the symptoms so produced.

(2) In some cases, the pure distemper virus-which causes fever, respiratory distress, and diarrheamay be accompanied by a second virus that brings on the changes in foot pads and nose.

(3) The severe illness caused by distemper or complicated distemper can lead to a temporary nutritional deficiency and loss of body fliuds that may account for the thickening and hardening.

Immunization with biological products is the best means of preventing distemper and the hard pad condtion.

New Course in Science

A revolutionary approach to the teaching of science which combines all the sciences in a single course emphazing their relationship to man was described to the 118th national meeting of the American chemical society held in Chicago, by Dr. John Xan, head of the department of chemistry of Howard college, in Birmingham, Ala. Taught without a text, the course is designed to give students a broad acquaintance with the modern scientific world and an effort is made to stimulate their interest in scientific discoveries and periodicals by basing examinations mainly on knowledge acquired outside the classroom, Dr. Xan reported. Ninety to 95 per cent of students finishing the combined general science course have voted for it in preference to the conventional type of science course.

"Candling" Eggs

Candling is used on practically all eggs before they reach the stores, An electric light is placed inside a box with a hole about the size of an egg, in which the egg is placed. In a darkened room, with some practice, it is possible to detect cracks, blood spots, developing germ and the size of the air cell. The latter is the most important criterion of freshness because it gets larger as moisture escapes and is replaced by air. By comparing a few eggs known to be fresh with others that are older. one may learn how to judge the size of the air cell and the age.

Changing "Hand-Me-Downs"

Giving "hand-me-downs" a new and different color via the dye-bath is one sure way of getting little sister or brother to wear them without resentment. Adding a hem, collar or belt will still further accentuate the "new look." Wash and thoroughly rinse all articles before dyeing, and also remove buttons. buckles and trimmings. Use color remover first, the bureau counsels, when the article is unevenly faded or spotted and when changing to a different color.

An Undermining Process

The British medical fraternity is overwhelmingly opposed to England's version of socialized medicine. Various reasons are behind this. One of the most important is that, under a policy of cradle-to-the-grave alleged security, there has been an alarming decline in the sense of family responsibility and individual duty. Young people who can afford it no longer help aged and sick relatives-

they just let the state do it all. Another reason, reliable reports from England say, is that this attitude of mind has also spread to many doctors. The civil servants give all the oredrs and there's nothing much for the doctors to do but go through the motions of practice in a purely routine fashion. There are no incentives to work hard, to experiment, and to seek new horizons of medical

It is inevitable that such a situation should exist under solialism. It is an undermining process — for the doctor and for all others who are emeshed in the dreary system. And what is true in England would surely be true here if we should ever adopt the administration's compulsary new health scheme, along with the kindred measures which are proposed.

The so-called "clinching" argument

for such schemes is that poor people can't get decent medical care. That is very largely untrue - under private medicine, splendid progress has been made in providing doctor's services and hospitalization at little or no cost to those who lack money. All realize that still more must be done in this direction. But surely it is not necessary to destroy our magnificant medical system — and to undermine our national fiber and character — to aid the very small percentage of our people who are indigent.

Britain's sad experience should be our guide.

NOTICE

According to Buttetin No. 19, just received from the Idaho State Liquor Control Board — this (Kendrick) Liquor Dispensary, will be closed this afternoon, Thursday, Nov. 1, to permit remarking of all prices. This is due to the new Federal Tay on on due to the now Federal Tax on on distilled spirits and wines. — Mrs. Ernest Freytag, local manager. 1x

opening of the road. Joseph Black-eagle, Lapwai, secretary of the Nez Perce tribal council and a direct descendant of Chief Joseph, told the 3,500 people attending the dedi-catory ceremonies that "it is an honor for the Nez Perce member to and a half times prewar levels and more than ample to meet all the needs of American industry and agriculture but the tremendous de-mands of cur allies for this stra-tegic mineral are causing a serious shortage.

ington. Charlie Wilson, a Nez Perce Indian of Lapwai, dressed in the regalia of a warrier, handed scissors to representatives of the three states to officially open the highway. Paul Hyatt, the Idaho supreme court justice; Charles Zurcher, Oregon state senator, and Clarence B. Shain, Washington state highway director, clipped the ribbons and traffic flowed over the new Chief Joseph Trail.

Sulphur Demands Heavy

Idaho farmers, who used 65,050 tons of fertilizer last year, are feeling the pinch of a growing sulphur shortage through the reduction of shipments of the soil-nourishing mineral to fertilizer manufacturers. Farmers of the state last year planted 3,593,120 acres. This year, crop prospects call for cultivation of 3,487,610 acres.

Idaho was one of four western. Idaho farmers, who used 65,050

90% For! 10% Against

Railroad workers are represented by 23 standard unions. By mutual agreement, 20 of these unions—comprising about 1,200,000 men, or more than 90%—are working under wages and rules agreed to by them and the railroads. But leaders of three unions—with only about 130,000 men, or less than 10%—still refuse, after more than a year of negotiations, to accept similar wage and rules agreements. These are even more favorable than the terms recommended by the Emergency Board appointed by the President.

Yes, it certainly seems to be finally about time that the leaders of the three unions stop their delaying tactics—their quibbling. But the leaders of the Brotherhood of Locomotive Engineers, the Brotherhood of Locemotive Firemen and Enginemen, and the Order of Railway Conductors continue to refuse. They continue a course of dillying and dallying. It is definitely time to

On June 15, 1950, an Emergency Board appointed by the President under the terms of the Railway Labor Act—an Act largely fathered by the unions themselves -made its recommendations on certain wage and working conditions ("rules" in railroad language) which had been in dispute between employes and the railroads.

More Than 90% of Employes Accept Since then, terms equal to or better than the Board recommendations have been accepted by about 1,200,000 railroad employes—more than 90% of the total of all workers. They are represented by 20 of the 23 standard railroad unions.

Less Than 10% Refuse But three unions—with about 130,000 men, or less than 10% of the total-have refused to accept, even after months of negotiations. These three unions are the Brotherhood of Locomotive Engineers, the Brotherhood of Locomotive Firemen and Enginemen, and the Order of Railway Conductors. These are three of the socalled "operating" unions. Already the highest paid men in the industry, their leaders demand still further advantages

over other workers. In all, there are about 270,000 operating employes. But not all of them, by any means, are represented by BLE, BLF&E, or ORC. As a matter of fact, less than half—132,000 to be exact—are in these three unions. More than half—about 140,000—are in other unions, principally the Brotherhood of Railroad Trainmen. What makes the whole situation so hard to understand is that these 140,000 operating employes are working under wages and rules which the leaders of the other 130,000 say they cannot agree to.

What Do the Railroads Offer?

They offer these three unions the same settlement which was contained in a Memorandum of Agreement signed at the White House on December 21, 1950, by four brotherhoods and the railroads. Later these brotherhoods sought to repudiate this agreement. But on May 25, 1951, the Brotherhood of Railroad Trainmen signed a complete agreement carrying out the

principles of the Memorandum Agreement of December 21. They have been working under this agreement since May 25.

What About Wages?

Under the terms of the agreement, yard engineers, firemen and conductors would now be receiving a wage increase of \$.34 an hour (\$2.72 a day) and road engineers, firemen and conductors would now be receiving an increase of 191/2 cents an hour (\$1.56 per day). Large sums of retroactive pay have already accrued and if the agreement is carried out, will be paid promptly.

What About "Cost of Living" Increases? The White House Agreement includes an 'escalator' clause under which wages will be geared to changes in the Government's cost-of-living index. Two such increases
—April and July, 1951—have already been
paid to the 90% of railroad employes covered by signed agreements.

What About the 40-Hour Week?

The White House Agreement calls for the establishment of the 40-hour week in principle, for employes in yard service. The employes can have it any time after January 1, 1952, provided the manpower situation is such that the railroads can get enough men to perform the work with reasonable regularity at straight time rates. If the parties do not agree on the question of availability of manpower, the White House Agreement provides arbitration by a referee appointed by the President.

What Else Do the Union Leaders Demand?

The continued quibbling of the leaders of the three unions has to do principally with rules changes, which have already been agreed to by the Brotherhood of Railroad Trainmen. Of these, the principal one seems to be that having to do with socalled "interdivisional service"-runs which take in two or more seniority dis-

The union leaders would bar progress and efficiency in the industry, and better service to the public, by maintaining a situation where they can arbitrarily stop a railroad from establishing such interdivisional runs. The carriers propose that if a railroad wishes to set up an inter-divisional run, the railroad and the unions should try to agree on such run and the conditions which should surround its establishment, and if the railroad and the unions can't agree, the matter will be submitted to arbitration. But the three union leaders still refuse.

Rules Can Be Arbitrated

The railroads have not only offered these three unions the same rules agreed to by the BRT and covered by the White House Agreement, but have even agreed to submit such rules to arbitration.

The Industry Pattern Is Fixed

With the pattern so firmly established in the railroad industry, it seems fair to suggest that the leaders of BLE, BLF&E, and ORC stop their quibbling and take action to make the railroad labor picture 100% complete. Certainly today's economic and international situation calls for a united front. And certainly no good reason has been advanced why these three unions should be preferred over all other railroad employes.

We are publishing this and other advertisements to talk to you at first hand about matters which are important to everybody.

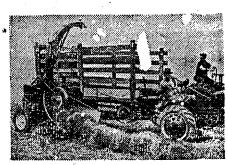

Nation Will Produce More 'Green Pastures' Grass. Farm Mechanization More Vital in Later Years

Prospects are evident that America's farmlands will grow greener in the second half of the 20th cen-

Outstanding in farming's past 5.3 years and bound to play vital parts in the years to come are the new importance of grass and the mechanization of the farm.

According to experts on the subject, grass is soon to rank as a prime con. butor to the health and wealth of the United States. Farmers who will turn to the use of grass as a real crop in itself, will find

Scenes like this will be more common throughout rural America as farmers turn to grass as a real crop. Here a field forage harvester, one of the newer developments in mechanized farming, chops and blows grass into a truck keeping pace with the tractor.

that it prevents erosion, builds up the soil, improves the land for crops that are to follow and provides greater profit through more economical feed.

Because they can now grow more grass with less work, farmers are planting more and more acres in green pastures. They are using more grass as rotation and cover crops and tests have proved to that grass in rotation with them corn and cotton vastly increases yields.

The making of hay and grass silage is the basis of grassland farming. This is a true product of the 20th century. Experiments started about 25 years ago are just now getting widespread acceptance as farmers find that grass silage is second only to grazing in a good Per Acre Each Month livestock program.

Handy Device

August Bruynell, proprietor of the Forest Hill poultry farm, North Weare, N. H., has a handy device to carry feed and eggs when he works in his big laying house which houses 1,925 New Hampshire bred hens.

Cultivator Needed In Control of Weeds

Chemical sprays are not yet ready to replace the cultivator in controlling weeds, according to Dr. J. C. Willard, agronomist in the college of agriculture at Ohio University.

"No chemicals so far available for use in crops will kill all weeds," Dr. Willard said. "If we use chemicals without cultivation to remove the weeds left after spraying, it will be only a short time before we have fields which are as weedy as before, but the weeds will be different and of kinds harder to kill."

Introduction of new chemicals every year makes spraying more of a specialist's job, he pointed out, cautioning farmers to beware of the fly-by-night operator.

Sleeping Sickness Menace To Livestock Is Recounted

Each summer and fall livestock owners are warned of the toll which may be taken of animals by sleeping sickness. Losses from this diséase showed a startling increase in 1947 and 1948, and figures for the past year are expected to show but little decline when finally compiled.

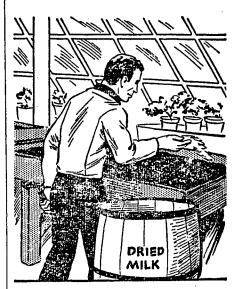

The virus of the disease may have "wintered over" with more virulence and in more places.

Milk Used as Plant Food in Experiment Scientists Report Milk Benefits Some Flowers

velopement stage. But many growers in the Pacific northwest already are reaping benefits.

Commercial flower producers say milk makes petunias grow faster,

Scientists report milk is good plant food for some flowers and vegetables, making them last longer, grow faster, and bear larger and more brilliant blooms.

last longer and bear larger and more brilliant blooms. It improves the color of roses, cinerarias and chrysanthemums. There are exceptions, including poinsettias and carnations.

Milk-fed vegetables also do much better than those grown under ordinary conditions.

The scientists reported the milk was fed either in dry or diluted fluid form. Further experiments with milk as a plant food are necessary before it is out of the developement stage.

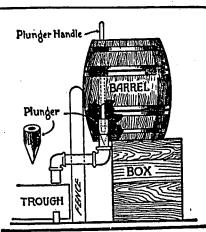

Iowa Farm Earns \$4.50

The average Iowa acre is earning between \$4.50 and \$5.00 a month, cash, the Iowa development commission reports. Which means that the average 160-acre farm, under good management, is bringing in \$768, gross per month.

Last year Iowa farmers made \$59.40 for each of the 341/2 million acres in farms in the Hawkeye state. That figures out \$4.95 per month, per acre, or \$495 per month for each 100 acres of Iowa land being farmed. In the first six months of 1950the leaner half of the farmer's year —Iowa farm income came to \$27 per acre, or \$4.50 per month, per acre. That still is \$450 a month for every 100 acres of farm land.

The commission hastened to repeat that the figure is gross income. Out of it the farmer must pay for power and machinery, labor, feed, feeder stock and breeding stock, before he arrives at his own salary.

Slop Storage Tank

On a farm where there are many hogs to feed ideas that will save labor usually are appreciated. The storage tank for hog slop, shown in the above illustration, has been used on a number of farms successfully. Materials needed include two pieces of 3-inch pipe 6 inches long, one piece of 3-inch pipe 12 inches long and two 3-inch elbows and assemble them as shown in the illustration. Mount the barrel on a box 30 inches high, placed close to the fence so that the pipe may go through into the feeding trough. Make a plunger out of soft wood.

U.S. Consumer Demands **Better Quality Meats**

The national economic picure and the more nearly equalized meat production in relation to consumption are putting much greater emphasis on quality or grade of meat animals than was true in the last several years of meat scarcity, livestock specialists report.

Live stock producers are now attempting to produce animals which nearly meet consumer demand for quality product.

Benefits Some Flowers

Montana State college scientists report milk is as good as some flowers and vegetables as for babies.

The use of milk in horticulture, particularly in greenhouse operations, is new and still in the development stage. But many grow
den swag usually follow the same to explaining here is an account of one of the big-him, and later died penniless. The time jobs perpetrated in 1865 just time jobs perpetrated in 1865 just time jobs perpetrated in 1865 just three miles north of McCammon, Idaho. A southbound stage was halted in this episode and relieved of \$100,000. The robbers made their getaway, but oldtimers maintain the gold was too heavy to carry and that it is buried somewhere near like trying to tote a piano onto the subway in the 5 o'clock rush. So, later the logic was too heavy to carry and that it is buried somewhere near McCammon. after helping themselves to as much McCammon. gold as they could carry without straining their suspenders, they burled the gold.

Pathos is not lacking in these legends. There is the one about the holdup near old Camas Creek stantonic control of the country of t

Firearms Still Needed On Most U. S. Farms

Rifle Is Still Effective Way to Control Varmints

Even though marauding Indians and bad men have disappeared, farmers and ranchers still need their guns almost as much as ever. Where the rifle was once needed to preserve life, the rifle and shotgun today help preserve the livelihood of those who live on the land. To many, firearms are still necsssary agricultural or ranching "tools."

For pest and varmint control, firearms are often far more effective than traps and less dangerous than poison, and in many cases are

To many, firearms are still necessary agricultural or ranching tools. They are effective in the extermination of pests and varmints.

the only means to destroy certain birds and animals that damage crops, stored grains and produce and kill poultry.

The farm boy with a .22 caliber rifle is probably the world's champion pest exterminator. For rats, sparrows, rabbits, squirrels, gophers, moles and crows and other small pests that can be shot at close range, he uses .22 short cartridges which are adequate and economical, but long rifle cartridges are much better for longer ranges and far more effective.

One of the best low-priced beginner's 22 that's come out in years is a single-shot bolt action with "an automatic safety that never forgets." This Model 47 is so designed that as the bolt is opened to permit loading, it sets the safety which must be moved manually before the rifle can be fired.

Increased Dairy Product Prices Forecast for '51

Milk and dairy products prices in 1951 will be moderately higher than in 1950, most dairy experts believe. A stronger demand will more than offset the effects of large carry-in stocks and probably smaller exports. Farm production of milk in 1951 is likely to be little different from the 120.5 to 121 billion pounds in prospect for this year.

Dominent factor in the 1951 outlook is the prospective sharp increase in demand, stemming from larger defense outlays. Both employment and wages are rising. Disposable incomes will reach a new high next year.

Many dairymen expect total cash receipts from marketings of all products in 1951 to increase more than expenditures, thereby giving a net increase in farm income. The increased income will probably exceed increases in expenditures.

Three-Winged Chicken

Technicians Rosemary Peplinski (left) and Olive Newton of the University of California medical school are studying one of the three-winged chickens used in skin graft studies. The third wing, transplanted from another chick from egg to egg before birth, is attached to the chicken's breast. U.C.L.A. researchers are trying to determine why a chicken wing can be successfully tranplanted before birth, but not after birth. The answer may be a big help in the progress of surgery. Chicks involved in the experiments grow up to be healthy hens and roosters, except that half of them have three wings and the other half only one.

Egg Production at New High in October, Report

A record rate of lay and the largest October egg production of all time were reported by the U.S. department of agriculture. Farm flocks laid 4,014,000,000 eggs

Archaeologists Excavate Early American Campsites

Camp sites of some of the earliest inhabitants of North America were excavated this summer at a site in the upper reaches of the Angostura reservoir near Hot Springs, S. Dak. The stone javelin heads found there, buried more than 20 feet deep by wind and flood since they were scattered on the surface as: much as 5,000 years ago, are quite similar to, although not identical: with, Yuma points. These Yuma. points, in turn, immediately succeeded the Folsom point, the curiously flaked javelin head from New Mexico which is one of the earliest: known implements made by human

beings in the New World. The Angostura site promises to be the most significant yet found; in the survey of areas soon to be flooded by reservoirs. This is a coo erative project of the bureau of American ethnology of the Smithsonian institution, the national parks service, and the bureau of reclamation.

The makers of these curious javelin heads apparently were nomadichunters. These sites in South Dakota could hardly have been more than bivouacs, and no semipermanent habitation site has yet been found. The remains were buried so deeply that it was necessary to use bulldozers in excavating them. Animal bones were found in association with the artifacts, but most of them were in such bad condition that it was impossble to make precise identification. Thus it is not known whether they are the remains of extinct animals or of species still living in the area.

Molds Disregard Chemical Rules in Survival Battle

If it weren't for the mold's disregard for the rules of chemistry, we might not have the miraculous antibiotics with us today, according to Dr. Donald J. Cram, assistant professor of chemistry on the Los Angeles campus of the University of California.

Almost all organisms in nature synthesize compounds—derived from sugars and proteins-which conform to certain patterns. But! molds, from which we get penicillin, streptomyecin, and other antibiotics, have a habit of turning out peculiar molecules, which do not conform to the patterns established

by nature. This manufacture of misfit molecules seems to be tied in with a unique method of self preservation. Molds compete with bacteria for food, and the competition is stiff. The peculiar molecules produced by molds are sugar-and amino-acidderived substances similar to those used in the metabolic chains of bacteria pick them up, as if they were normal sugar and amino acid molecules. However, there is just enough change in the configuration of the compounds to cause them not

to fit into the metabolic chain. Thus the metabolism of the bacteria is broken down, they die, and there is that much less competition

for the molds' food supply. Were it not for this unique method of self-preservation, these molds might have fallen by the wayside long ago in the evolutionary battle of survival, Dr. Cram points out.

Similar to Ceramics

With the aid of special organic finishes, inexpensive plaster and plastic castings are now made that duplicate the attractive appearance of ceramics without the relatively high production costs. Casts made from plaster and papier mache are not as durable, naturally. They're! soft, porous and lack resistance to impacts. They can, however, acquire excellent surface hardness and approximately as much impact resistance as can be expected in ordinary ceramics if they are properly sealed and glazed with organic thermosets.

Car, Coatings and Celluloid Cellulose nitrate, used in so many industrial finishes today, was discovered in 1846, in Basle, Switzerland. It did not, however, find a commercial use until Wesley Hyatt. an American, produced celluloid in 1868 from cellulose nitrate and camphor. The next step forward in the use of cellulose nitrate came only about 30 years ago when it was introduced as an ingredient of automobile finishes.

Potlatch

Published by the Kendrick Creamery

HELLO, THERE, FOLKS -

Colder, isn't it? Reminds us for sure that winter is coming, and with it come colds, sniffles, and the kindred ills."that man is heir

Well, perhaps they can't be prevented, but you can go a long ways with proper diet to make up for lack of sunshine - and right there is where milk, fresh, pure, pasteurized "Potlatch Chief" milk comes in. Every adult should have at least a pint a day and every growing child at least a quart. Are you drinking yours?

Wife: "I'll never go anywhere again with you as long as I live!"

Hubby: "And why not?"
Wife: "You asked Mrs. Smith how her husband was standing the heat, and he's been dead for two

Like hot biscuits? Of course you do! Who doesn't? But to en-

joy them at their best, be sure they're liberally spread with htat fine, sweet "Potlatch Chief" Butter. It makes any good food bet-

During a grouse hunt in England, two sportsmen were shooting at a clump of trees near a stone

at a clump of trees near a stone wall. Suddenly a red face popped up over the top of the wall.

"I say, you almost hit my wife!"

"Did I?" cried the man, aghast.

"I'm terribly smorry — have a shot at mine over there!"

Selling your cream? If not, why not? For it's a good source of income. In fact, it might even pay your grocery bill during the winter months. Remember, we pay right now. And return a steam-sterilized, ready to use can. You don't even have to wash it. Bring that cream to us.

Sell us your cream!
