MORE ABOUT ROADS

consideration the improvement of be accomplished. Such work is classithose road sections which had a total fied as stop-gap improvements and

were deficient in one of the rating to allow for improvement of sections at were Lewiston visitors Thursday. After results of this study were elements. The resulting estimate of road which are now in tolerable tabulated, the department carried its showed that it would cost \$128,500,000 condition but which will require imtabulated, the department carried its analysis a step further to determine how much it would cost to improve all roads now below a tolerable standard to a modern design. Such a program would have easily rating of 65 points to a standard satisfactory for the traffic using them.

The cost analysis was made in two ways. First, an estimate was made of the cost of improving to an adequate them and a period of the cost of improving to an adequate to improve all roads now below a tolerable standard to a modern design. Such a program would have to be spread over a considerable time and a period of ten years was selected as a maximum. On this basis, it is necessary to add to the basic program of the cost of improving to an adequate to improve all roads now below a tolerable standard to a modern design. Such a program would have to be spread over a considerable time and a period of ten years was selected as a maximum. On this basis, it is necessary to add to the basic program of the cost of improve all roads now below a tolerable standard to a modern design. Such a program would have to be spread over a considerable time and a period of ten years was selected as a maximum. On this basis, it is necessary to add to the basic program of the cost of improve all roads now below a tolerable standard to a modern design. Such a program period. The final adjustment to the basic cost figure was an allowance for the cost of replacing family of Othello, Wash.; Mrs. L. S. LaHatt of Pomeroy, and Jean the cost of the program but the early years of the program but which may wear out before the end of the 10-year period. The final adjustment to the basic cost figure was an allowance for the cost of replacing to the cos of the cost of improving to an adequate standard all sections now below a tolerable level. This estimate was made on the assumption that necessary materials such as steel be patched up to make them useable necessary materials as to make them useable to make them useable to make all total estimate of needs over a 10-year period. Those adjusts and added approximately \$37,000, and ments added approximately \$37,000, and adjusts and adj would be available. It also took into until complete reconstruction could

sufficiency rating above the tolerable an allowance to cover the cost therof minimum of 65 points but which was added to the basic cost figure.

Such a program is far beyond the present funds available though it does represent the work which would be required to modernize the state homes here. They are employed in a highway system. Realizing the present impossibility of achieving such a program, a second estimate of needs was made. Here the objective was to determine how much it would cost to bring the highway systems up to a standard which would permit as to be standard which we would be standard which would be standard which would be standard which we would be standard which would be standard which we will be standard which we would be standard which we will be standard which we will be standard which we will be standard which we a standard which would permit of "getting by" for the next ten years.
This program consisted largely of widening and resurfacing operations on existing highways except in cases where work of this type many consisted largely of family of Kellogg arrived here Monday and are visiting relatives and friends. where work of this type would have to be replaced within a few years. In such cases, this estimate included

sufficient amounts for complete replacement to modern standards. The basic requirements for this emergency program, designed only to meet present critical needs on the state highway system, amount to \$46,000,000. To this was added an adjustment to take care of stop-gap improvements, replacement of sections now tolerable but which will become critical during a 10-year construction program and replacement of improvements accomplished early in the program but which are expected to require replacement before the end of the 10-year period. Needs for those purposes amount to \$43,000,000 making a total program of approximately \$89,000,000 to meet critical construction needs on the state highway system or \$8,900,000 annually for the next ten years.

On the basis of currently available revenue and through the usage of Federal Aid funds to the fullest possible extent, this critical needs program is about the maximum which can be achieved by the department. Mounting maintenance costs have materially reduced funds available for construction because they must be met entirely from state funds. Every dollar of this increase, when matched with Federal Funds, would provide nearly \$3.00 for construction

It should be pointed out that this emergency program covers only those sections of road which are in critical condition today. National trends indicate that our highways are wearing out twice as fast as they are being program will certainly be no better mer months. today and may even be worse

tne road between Kendrick and Julia-etta is on the list for reconstruction for it has had only stop-gap work for many years. At present it is narrow, plagued by slides, rough, and certain-ly inadequate for the traffic it car-ries, not to mention the absence of a guard rail along the railwood track. a guard rail along the railroad track. kota. Several serious auto accidents have occurred on it in the past couple of years — but luckily no one was killed. We wonder what this road "rates."

Opening Rock Pit At Southwick Thurston Storey, Orofino, has been awarded a contract by the state highway department to open a rock pit and crush a stock pile of gravel for road use near Southwick. Many have believed this meant the rebuilding of the Kendrick-Southwick road, but according to information given us it is for maintenance use.

became plugged recently and the big problem was to find the sewer pipe. The city map shows the location toward the southwest corner of the front yard. The first ditch was dug seven feet deep, and nothing but rocks found. Another hole was started and a six-foot depth reached — but still no sewer pipe.

Late Tuesday afternoon a fire hose us, it is for maintenance use.

is, it is for maintenance use.

Late Tuesday afternoon a fire hose was brought into play, the pressure The local state highway department crew is busy these days hauling rock which is being treated with pre-mix and used to patch holes in the oiled roads in this area. Clarence Perryman says particular attention is being given the section between Kendrick and Juliaetta, where deep holes are being filled with grayel in preprint the pipe and so it was found the pipe and so it was found to make the pipe and so it was fou are being filled with gravel in prep- tact Rev. Synthetic Sow's Milk Is Used Successfully

3,000 Piglets Raised On Experiment Formula

The development of a synthetic sows's milk, made possible by the wonder drug terramycin was annuonced recently by Herbert G. Luther, research scientist associated with the Pfizer & Co., laboratories of Brooklyn, N.Y.

The formula, called Terralac, was ried on 500 piglets at the company's laboratories. In addition, 3,000 piglets have been raised successfully

Piglets on test in the laboratory of Chas. Pfizer & Co. For this photograph the front of each of the top two cages has been removed. Bottom shows normal

without sows on several large pig farms which cooperated in the testing of Terralac.

Luther contends the formula may revolutionize the swine-raising in-dustry. In the first place, his experiment reduced infant pig mortality to an astonishing 5 per cent, as contrasted with the national average of 21 to 33 per cent. It also largely solves the problem of the runt, long a bane to hog-raisers, by making growth-stimulating terramycin and milk equally available to all pigs in the litter.

Luther emphasized that good pig farm management is essential for the successful use of Terralac. Constant temperature must be maintained, either via the use of heat lamps or by blowing warm air. And it must be prepared properly and fed at regular intervals.

Average U.S. Farm Bigger As Number Falls

The Bureau of the Census reports a decided trend toward fewer but bigger and better equipped farms between 1940 and 1950.

The number decreased by 713,000 in the decade, the bureau reports, but the average size unit grew from 174 acres in 1940 to 210.5 acres in 1950. There were 5,384,000 farms in 1950, against 6,097,000 in 1940. The sharpest decrease came in

the five years between 1945 and 1950, when the number of farms dropped by 475,000.

Other statistics in the report included:

About 870,000 fewer persons were working on U.S. farms in 1950 than in 1940.

Less than one-third as many horses and mules were on farms in 1950 as in 1920.

In 1950 there were 59,764,000 cattle and calves more than 3 months old on farms as compared to 60,-\$74,736 in April, 1940. The number of chickens on farms

was 2,500,000, or 0.7 per cent more than in 1940.

Plenty of Pull

One of the newest aids to farmers is the power curve tire developed by B. F. Goodrich engineers to provide maximum traction and prevent bogging down of heavy tractors and combines in the sticky mud or sandy soil of rice fields. The tire is reported to be the first suitable for use in all types of soil used for growing rice.

Veterinary Group Sets Up **New Defense Committees**

A nation-wide network of defense emergency committees has been set up by the veterinary medical profession to help safeguard this country's livestock health and food profluction in case of war, the AVMA reports. The committees will assist on defense measures in case of biological warfare, atomic warfare, atomic blasts, or other wartime emergencies concerned with the mation's animal population.

Duke Psychologist Offers Tips on Cigarette Control

Do you have trouble leading a sane cigarette life?

If so, here's a common sense recipe by Dr. Gelolo McHugh, Duke University psychologist, that may help you "use cigarettes instead of being used by them."

"People who have to have cigarettes need psychological help, not scare tactics such as threats of stomach ulcers or lung cancer," Dr. McHugh says. "Swearing off entirely is dangerous, because if you fail once, the next try will be that much harder. Limiting your cigarettes to eight or 10 a day is also risky, because it keeps the thought of smoking uppermost in your mind."

Here are Dr. McHugh's suggestions for cutting down:

1. Set aside an hour or two at the beginning of each day and don't smoke during that period no matter how much you want to. After that, smoke as much as you like

for the rest of the day.

2. Don't make your daily nosmoking period longer than you can safely control. Over-ambition sometimes leads to failure.

3. Tell your friends what you're doing. Their interest will help you keep control over your no-smoking period.

"After following this plan for several weeks, smokers often find that their cigarette control is growing stronger," Dr. McHugh said. 'Experiments show that smokers who set aside a no-smoking period do not have a tendency to smoke more than usual during the rest of the day to make up for lost time.

"Most important of all, after two or three weeks of controlling part of the day, the smoker begins to find himself smoking a little less during the free period. This means that he is on the way to mastering cigarettes instead of being mastered by them."

Dr. McHugh's suggestions are based on data collected over a period of five years and covering some 600 people.

Chubb Crater 1,325 Ft. Deep, Largest Meteorite Crater

A new champion's official measurements have been announced by the National Geographic Society.

The champion is Chubb Crater, established as the largest of all known meteorite craters in the world as the result of four weeks' research carried on last summer at the crater site in northern Quebec by Dr. Victor Ben Meen, Toronto geologist, and five scientist-

The huge pockmark in the sub- Contour Farming Cuts arctic granite has a maximum depth of 1,325 feet, figured from the Soil Losses in Half level of the highest point on its rim. The surface of the lake in the crater bowl is 500 feet below the rim's top level, and the maximum depth of the lake is 825 feet. Diameter of the rim averages 11,500 feet, and its circumference is 6.8

The depth is thus a few feet less and the rim diameter a few hundred feet more than indicated by preliminary figures dispatched from northern Quebec last August at the time field work was completed. Both dimensions, however, are more than twice the corresponding ones of Arizona's Meteor Crater, long officially recognized as the earth's largest scar known to be due to an earth-meteor col-

The crater lake averages 9,100 measures 5.4 miles around.

Dr. Meen, director of Toronto's Royal Ontario Museum of Geology, and Mineralogy, led an expedition turning ma to the crater site. With magnetoto the soil. meters, they defined a "magnetic anomaly"-a subsurface mass of iron outlined by its effect on the earth's magnetic force. Such an anomaly is attributed by scientists to meteorite fragments buried deep in the granite rim.

Kinds of Mines Coal mines are of four kinds,

three of them underground. If the mass of coal can be reached horizontally, say from the side of a hill on a level grade straight to the heart of the coal, it is called a Drift Mine. If you have to reach the coal at a perceptible angle, down or up, you have a Slope Mine. To get inside either of these mines, tunnels are made into the sides of the hills. The miners may go to the working areas by "man-trip" cars, which are trains of mine cars pulled by especially designed mine locomotives. If you must ride a cage (mining term for elevator) to reach the coal seam, you are in a Shaft Mine. If the coal lies near the surface of the earth and you can rip it out by huge electrically operated shovels and bulldozers. you have an Open Cut or Surface (sometimes called "Strip") Mine.

Indian Legend

Hiawatha, who is believed by many persons to have been a purely legendary character, really lived about 1450 A.D. The mighty Iroquois chieftain of the Onondago tribe of North American Indians was transformed by legend into a miraculous character with supernatural powers. About 400 years after his death, he was immortalized by Longfellow in "The Song of Hiawatha", an epic poem writ-ten after the style of the great Finnish Kalevala.

Small Town Utility Serves Farm Folks Gas Made Available To Farms for First Time

The farm folks within 20 miles of Antigo, Wis., have gone in for gas in a big way. This new interest of farm folks in heating and cooking with gas started over a year ago with the reorganization of Antigo's City Gas company.

The Antigo utility which manufactured gas from oil, coke and steam converted its plant to "pro-pane-air" gas and offered service

Mrs. Dale Madison, a rural homemaker, has converted her kitchen to gas, and reports it gives her more freedom from kitchen duties.

to farm homes and rural firms within a radius of 20 miles.

The new rural customers have their own "backyard utility" in the form of storage tanks for large users and "bottled" installations for homes with smaller consump-

Because they are a part of the Antigo utility system, country customers receive monthly fuel bill just like the town. Fuel consumption is recorded on a meter attached to their cylinders or tanks. Bad weather can't interrupt service, since a sufficient supply is stored on the premises in advance of use. Empty cylinders are peri-odically replaced by company serv-

Since the reorganization, rates have been reduced for town and farm users three times.

Iowa agronomists report that contour farming cuts soil losses in half, boosts corn yields as much as 7.4 bushels per acre and ups soybean production by 2.7 bushels

Other advantages from contour farming include lower fuel and operating costs for tractors and other machinery and an increase in the length of corn rows.

The need for more contour cultivation will increase with the steadily expanding acreage of row crops to meet the nation's food needs.

While contouring is a vital step in keeping soil at home, other soil building measures are needed to keep farm land at high yielding levels. Every crop burns up organic matter and uses up plant nufeet in diameter. Its shoreline trients. The organic matter can be replenished by growing wellfertilized deep-rooted legumes regularly in the rotation and by returning manure and crop residues

Safety Plug

A new safety plug has been developed that should be of interest to most farmers. It has a tiny replacable fuse. Electrical cords are connected to the plug exactly as they are connected to the wall socket itself. The fuse blows out should a short circuit develop in any connected cord. This prevents current from reaching the danger point, instantly cutting off the source of fire.

Nebraska Farmers Paid High Cost for Corn Crop

Nebraska farmers paid with two lives, 194 fingers, 18 hands, 10 arms, one leg, four toes and two feet in gathering approximately 225 million bushels of corn. That is last year's accident record. Failure to stop the cornpicker before trying to remove the stoppage of the machine accounted for almost every accident. Farmel's should discuss safety problems with their harvest crews.

Oklahoma Youth Is U. S. Star Farmer Other Young Farmers Are Honored by FFA

Harold DeWayne Hodgson, 20-year-old farmer and Hereford cattle breeder of Freedom, Okla., was named Star Farmer of America during the 24th annual national FFA convention at Kansas City. He received an award of \$1,000 for being named the outstanding future farmer of the country.

Three other young farmers recieved awards of \$500 each as Star. Farmers of their respective regions. They are George Williams, 19, of Nicholasville, Ky.; Joe Harris, 20, of Eagleville, Calif.; and Ralph G. Sanner, 21, of Kutztown,

Harold DeWayne Hodgson, 20, Star Farmer of America, owns a 320-acre farm and rents an additional 255 acres.

The Star Farmer awards are made annually and are the highest recognition given to FFA members. The winners were chosen from 295 candidates. Outstanding accom-plishments in farming and rural leadership, along with evidence of the youth's successful establishment in farming are the principal considerations used in determining winners of the awards.

Hodgson owns a 320-acre farm and operates an additional 255 acres of rented land.

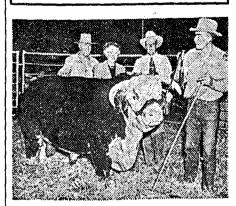

Engineer Suggests Way To Meet Labor Shortage

The nation's farmers next year will be asked to maintain a high standard of production and will again be faced with a severe labor shortage of several hundred thousand workers.

Here are four suggestions by which production can be main-

- 1. More efficient use of management and labor. There were a lot of chuckles when the efficiency experts started working for industry, counting steps and clocking movements. As a result of their work, however, our industries are the most efficient in the world.
- 2. Increase mechanization. In normal times, the answer to labor shortages has been increased mechanization. If we get the machinery, it is still a partial answer.
- 3. Efficient building arrangement. Time and labor required around buildings has changed little in the last 50 years.
- 4. Survey of urban districts and rural towns. You can often find laborers in rural towns.
- The farmer who surveys his needs and acts on these suggestions can solve his labor problems.

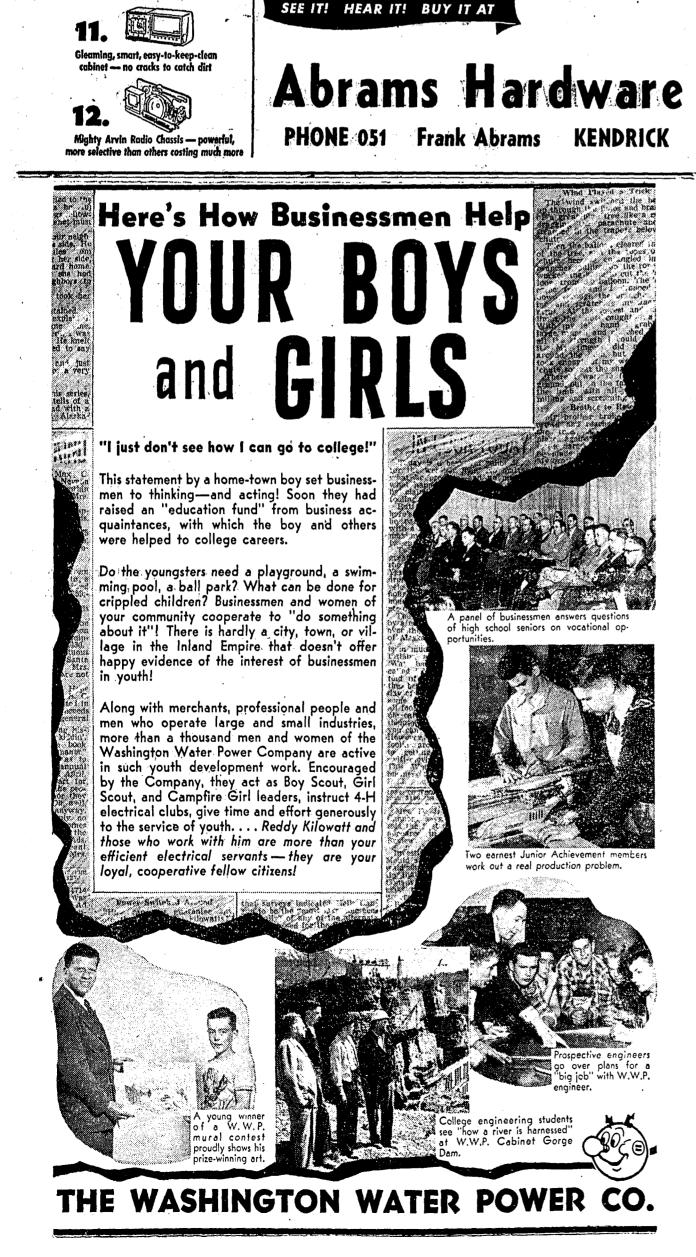

Record Price

A new world's record price of \$87,500 for a purebred Hereford buil, 5-year-old Baca Prince Domino 20th, was paid by A. H. Karpe of Bakersfield, Calif., at the sale of the Baca Grant herd at Gunnison, Colo. Left to right: Mr. Karpe, Mrs. Alfred M. Collins, widow of the late owner of the Baca herd, Bill Hutchinson, builder of the Baca Grant herd, and Mitch Minis, superintendent of the show barn.

Next Few Weeks Is Time For Cattle Louse Control

The next few weeks is the ideal time for cutting the life span of cattle lice that are at their peak during winter months. If animals are not treated for this pest and profit-robber, they will reflect poor signs of progress. Mature cattle on feed will not gain properly and young stock and calves will not grow normally. In addition, the cattle will have a general unthrifty appearance.

New Deferment Regulations

Information about a change in college student deferment and other selective service data has been received by C. A. Talberg, director of student affairs at Idaho State College.

President Carl W. McIntosh and Mr. Tallberg have been informed by selective service officials at national headquarters that they will no longer grant college graduates a 30-day postponment of induction. Graduates are now immediately liable to induc-

Processing, however, ordinarily will take at least 30 days, since at the end of his academic year, every deferred student, including any recent graduate, must be reclasified by his local draft hoard. local draft board.

As a result, ever since commencement, the registrar's office has been busy determining the grade average of all male students. To be considered for deferment, college students must have either a score of 70 or better on the selective service colege qualification test or high class standing among the male members. Such students must be in the upper half of the freshman class, upper two-thirds of the sophomore class or upper

A student who wishes to return to ollege next fall want three-fourth of the junior class. college next fall must give notice in writing to his local board that he is eligible and wishes to continue his student deferment status for another year. He must state that he has requested the college to send to the board promptly his Selective Service Form 109 on class standings. He must give to the college the correct ad-

dress of his local board. The Educational Testing Service automatically sends to his local board the student's score on the Selective Service College Classification test.

The Bear Is At It Again

Do you remember that U. S. plane that was shot down by the Russians in the Baltic Sea two years ago? A late bulletin announces that the Swedes have found five Latvian fishermen who witnessed the attack.

This news comes on the heels of the Swedish rejection of the Soviet charge that the Swedish Air Force Catalina, shot down by the Russians a short time ago, had violated Soviet territory, and had opened fire first on the Red MIG's.

In a stiff note, Sweden stands by her initial charge to the Kremlin, demanding punishment of the guilty flyers and indemnities. The unarmed Catalina, never within fifteen miles of Russians territory, was on a rescue mission, searching for survivors of another Swedish plane that disap-

peared over the mid-Baltic. Noted for the diplomatic dexterity that enabled her to remain neutral through both World Wars, Sweden's freezing unit. Cheap. Mrs. Cecil present attitude, and the rising anger Babcock, Kendrick. 26-1x of her citizens over this outrage, has 26-1x of her citizens over this outrage, has European capitals buzzing.

And now, Washington, too, is in the act. Will we, in the face of this 28-tf. new evidence on the fate of our own flyers, display as much spirit as Seweden? Perhaps Mr. Acheson, now in Europe, had better stop off in

Date Of Birth On License Plates

John Garvin of Wenona, leaving the postoffice the other day, studied rooms, garage, chicken house, 2 his newly arrived auto license plates. "Well I'll be darned." he was heard to mutter. Then, reaching the door, he looked at them again, and said: "Well I'll be darned, what do you man, Kendrick. Phone 934. 22-4x know about that! I'll be a son-of-a

Finally a bystander asked him what the consternation was all about. "Oh, remarked John, "I was just looking RED FRYERS FOR SALE — 40c at these license plates. It just so lb., live weight. C. A. Kendrick Gazette

Potlatch

Published by the Kendrick Creamery

HELLO, THERE, FOLKS -

For a quick "pick-me-up" during the day - or any time, for that matter, just drink a glass of ice cold "Potlatch Chief" milk. You can't beat it for flavor and purity. It's pasteurized - also homogenized - if you prefer.

Woman Lecturer: "Brides should try to train their new husbands to eat out of their hands --Bored Voice from Audience: "Yeah, it would save a lot of

dish washing!"

Yes — The weather this past week has indeed been disagree-able, but you'll find that there is nothing better to improve your family's disposition than generous servings of "Potlatch Chief" Ice Cream, either for dessert or for that "between the meals snack." They'll love it — and it's good for them, too. Made in all the standard flavors, plus "Specials." Next

time you're in town take home at least a half gallon. Modestly priced, too.

Wifey: "Dear, if I had it to do over, do you know who I'd marry? Hubby: "No, who?"

Wifey: "You, of course." Hubby: "Oh no you wouldn't!"

Don't slave over a hot stove all day. Put up your fruit and vegetables the quick, easy modern way — by freezing. We have a locker box that will fit your purse and needs. Come in and look them over. Costs are very low.

"I can't quite diagnose your case," said the doctor. "I think it must be drinks." "All right, doctor," replied the

patient. "I'll come back when you are sober."

And don't forget - we want to buy your cream!

WEEK - END
