 Inrougn classes and linking the line — one thing was evident, they were having a good time and welcom-ed the opportunity to better under-stand the needs of the school.

Considerable surprise was manifested over the cramped conditions in which students and teachers were working. Classrooms fairly bulging at the seams present problems. Students must be fed in relays from 11:20 through the noon hour in the Hot. Lunch room, and then things are so crowded it isn't unusual for some one to get a dish of hot soup down his

neck! Parents who had not visited school before were heard to say: "I didn't realize the building was so shabby --Mr. and Mrs. John Blankenship and family were Sunday dinner guests of mainly were funday dinner guests of ence department is on the "advised" status by the State Board of Educa-tion, since it is not adequate from the standpoint of room.

#### State Highway Report

Lewiston - Construction work continued on seven projects throughout the district the past week.

On the Ahsahka-Kendrick project the grading at the Devil's Elbow is complete and the grading of the sec-tion east of Kendrick will be completed this week. One course of surfacing has been placed on the Devil's Elbow section. Reconditioning present road outside the grading sections and placing surfacing is underway, with surfacing in place on 20 miles of the project.

A special crew completed placing a losed down most logging operations, fence around the top of a rock cut as they softened roads to such an ex- slope in Kendrick, which has been a tent that hauling was all but im- hazard in the community, as it was near the school playground.

Appraisal of right of way needed for the next section of the Lewiston-Spalding highway is completed, and negotiations will start very shortly.

It Really Needs To Be Done

As another winter closes in on the Potlatch valley, we still see the road lying between Juliaetta and Kendrick

On both ends of this four-mile early Thanksgiving dinner — and stretch lies a fine, wide highway — Wallace Clark's birthday anniversary, ample to carry the needs of the Mr. and Mrs. George F. Dennler en-tertained at a pinochle party Friday approximately 2.8 miles in length, crooked in spots - with the crooked sections the narrowest.

This road carries a great deal of traffic, but most important of that traffic is the school buses, laden with our future citizens.

It wouldn't take very much to widen and straighten this 2.8 miles and when ice and snow closes in, the additional width can make a tremendous difference between safety and danger.

True, this section is oiled, it is dust free, and comparatively smooth, far better than it was a few years go - but it should be still better. We have no figures on the traffic count, but it runs quite high.

As, communities (Juliaetta and Kendrick), as organizations, P.-T, A., Grange, Lions Club, Commercial Club, Mrs. Cox and children had spent the Mrs. Tom Dennler, Miss Burneda Boards of Village Trustees, School

It's said that "the squeaking wheel gets the oil", so let's squeeelll" and see what happens.

#### University Enrollment Up

U. of I., Moscow - An increase of Johnson's Story of Success approximately 15 percent in the cur-rent enrollment of the college of edu-cation at the University of Idaho over the 1953 fall enrollment was reported this week by Dean J. Frederick Welt-zin. He said that the rising tide of zin. He said that the rising tide of interest in this field indicates that emphasis given the last few years to the advantages of teaching careers is paying off. Enrollment in the college of edu-cation this fall has climbed to 562,

including 30 students doing graduate work. The total last fall was 489.

In addition to the college of edu-cation students, 293 students in other cation students, 293 students in other divisions of the university have indi-cated their interest in teaching car-eers. These include 189 in the college of letters and science (liberal arts); of letters and science (liberal arts); 60 in the college of agriculture; 7 in the college of engineering; 7 in the college of business administration, and 30 graduate students majoring in fields other than education. This brings the total number of students showing an interest in teaching care-ers to 855.

#### Game Still Is History

U. of I. — The University of Idaho's football victory over Washington State College, October 23, which made state College, October 23, which made history the second the gun went off, is still news. Editors of Life maga-zine advised from New York this week that the victory, awaited for 29 years, would be featured, in a fortheoming issue of that national forthcoming issue of that national ican industry. Its main office and publication.

Seven pictures will be used in telling the story of the game and its aftermath, including the nine-mile march over the Palouse hills by about 1,000 W. S. C. students. The march was made to pay off in a big way the annual walking wager between stu-dents of the two schools on the outcome of the game.

# Started About 65 Years Ago

When Samuel Curtis Johnson began making parquet flooring in his Racine, Wis., workshop 65 years ago, he little dreamed of the turn his business would take.

It was a small operation, with two men and two boys doing all the work, but they were thorough craftsmen. Their flooring can still be found in old American homes. Mr. Johnson, reading his mail by lamplight in the evening, noticed that more and more customers were turning to him for information on how to care for floors. Knowing that many floors in Europe had withstood the tread of centuries, thanks to wax, he recommended that his customers

use the same substance. Within a few years the Johnson company was manufacturing its own wax and wood finishing products. They subsequently found that the sideline was outstripping the main products in volume of sales. In 1916, with simple tastes in home decorating becoming more evident, the company abandoned its parquet business and concen-

laboratory in Racine, the plans for which were drawn by Frank Lloyd Wright, is a symbol of in-dustrial growth. The company has offices and plants in Canada, England, France, Australia and other parts of the world. It has a re-finery and plantation in Brazil where the world's supply of car-

nauba wax is obtained. The little group that began the manufacture of parquet flooring in the back-street workshop 65 years ago could never have guessed they were sowing the seed of a business

Nurse Braved Fever, Risked Life to Help Malaria Fight

Feeding disease-laden, killer mosquitoes once was the hobby of an elderly Baltimore nurse.

Miss Lena Townshend, now 76 years old, hoarded spare time from her nursing duties to provide life-sustaining sugar water for the caged mosquitoes used in yellow fever experiments by the late Army doctor and scientist, Major Walter Is 'Liquid Dynamite' Reed.

As a civilian nurse, Miss Town-shend's 16-month affiliation with Dr. Reed and his important work was unofficial but she made a definite contribution to the project's success. Her experience with the menacing mosquitoes today are a fond memory in her career, 38 years as a practicing nurse.

While the Army prepared honor Major Reed by observing the steel drums in underground tanks centennial of his birth, September at least 75 feet from any building. 13, the gray-haired nurse was proud but modest in a discussion never be left in open containers in of her work in the fever-ridden any building. country that was Cuba in 1901. Miss Townshend went to Cuba due to a post-war shortage of nurses and a personal desire for of possible ignition. foreign duty at the turn of the century. As night superintendent of Havana Municipal Hospital No. 1, she had a role in the fight against another epidemic of that time, typhoid fever. Her "spare time" work was done in Dr. Reed's laboratory, one part of the hospital, after she already had put in 12 hours of night ward duty. She worked on the yellow where. fever charts which Major Reed maintained for the benefit of government and private hospitals in this country in addition to feeding the mosquitoes. Interested both in the capture and care of the man-killing in-sects, Miss Townshend paid little heed to the other laboratory animals, guinea pigs and rats. She said she wasn't afraid of them but "I just didn't like them." Although she nursed both yellow and typhoid fever cases—so many that she is unable to count them-Miss Townshend escaped both diseases.

# Shorthorn Breeders **Conduct Experiment 102 Bulls Put Through** First U. S. Program

Shorthorn breeders recently put 102 bulls through an obstacle course in the Nebraska range courtry with a view to toughening them up for a unique show and sale held at Broken Bow, Nebr., last month. Converting farm bulls from midwestern herds to rugged range

The drove of Shorthorn bulls above were part of the Broken Bow experiment to toughen up 102 animals to be used in crossbreeding programs in large commercial herds. The project was sponsored by the American Shorthorn Breeders Association.

bulls for service in large commercial herds of the west, the program was called the Range Bull project. The bulls were judged in groups of two and three, in the manner of "Camp Showings" in Argentina, and then sold to western cattlemen who wanted them for regular herd sires or for cross-breeding programs. It was the first such program in the United States.

The animals were consigned by 48 breeders in the middlewest and east and were turned out to range on July 1.

# Gasoline on the Farm

Gasoline on a farm is "liquid dynamite" and must be handled with extreme care to prevent explosions and fires. It is estimated that annual farm losses from gasoline fires amount to more than \$7,000,000.

Here are eight safety rules the broiler industry---is expected to acfarmer should follow: 1. Gasoline should be sto

count for almost half the chicken

# **Good Pasture Program** Means More Profits

# **Over-Grazing Can Kill Out Pasture Growth**

Now is the time to plan a "com-plete pasture program" that will give your dairy cattle an abundance of high quality, low cost feed at: all times next year, says the Middle West Soil Improvement Committee.

The Farmer who has an all-season supply of succulent forage, grass silage or hay is the farmer who will have bigger milk checks, lower feed costs and more overall profits, the

committee points out. Earl Jones, Ohio State University extension agronomist, says that a well-rounded pasture plan should include: (1) Seeding well adapted leg-

ume-grass mixtures; (2) The use of lime and commercial fertilizer: (3) Good grazing management.

Jones recommends alfalfa, lading clover and grass for summer graz-ing. Where alfalfa does not thrive, ladino clover and grass will do a good job. Timothy, brome grass or orchard grass may also be used.

He cautions farmers to avoid killing out pasture growth by overgrazing and to provide palatable and nutritious pasture by avoiding un-der grazing. Jones suggests dividing pasture areas into lots. Cattle are allowed to graze down growth in one

lot and then are moved to another. Along with good legume-grass mixtures and managed grazing, Jones emphasizes the benefits from adding lime and fertilizers carrying nitrogen, phosphate and potash.

# **Poultry Industry Expects To Boost Production**

One of the nation's newest agricultural industries is expected to boost the value of poultry products beyond the four billion dollar mark this year.

This new industry-known as the

# "Sure I want a **CLOTHES DRYER** ---BUT...

# HOW DO I GET ONE

You probably realize the tremendous amount of work and effort you could be saving every week with an ELECTRIC CLOTHES DRYER.

And every time the rain drives you down into the basement to hang your clothes in that damp and unsunny atmosphere, don't you wish you had a DRYER?

#### Well, NOW YOU CAN CONVINCE YOUR FAMILY YOU NEED A DRYER, and here's how:

Pay a visit to your home-town appliance dealer or to the nearest WWP office. They'll DEMON-STRATE to you EXACTLY how much time and work you save with a DRYER. Many dealers will even wash and dry a few linens for you if you bring them in. Call first and find out. Your family will see the towels and such are softer, fluffier than ever before --- something they'll really appreciate.

WHAT'S MORE - Now you can get easy

WWP's new Appliance Hookup Plan gives you easy financing on any special installation costs for an electrical appliance. You simply pay it off monthly on your electric bill.

See Your Favorite Appliance Dealer . . . Ask him to explain the details of the WWP Appliance Hookup Plan.

financing for

Installation Costs!

## Sunken Ore

About 100 years ago on the Marquette Range in Michigan, ore cars were sent down a long, descending grade to a Lake Superior dock. But sometimes the ore plunged to the bottom of the lake. In the 1850's, a strap iron railroad was built down the grade from the mines to the docks in Marquette harbor, 12 miles away. Strings of cars were loaded with ore and coasted by gravity down to the waterside. A brakeman rode each string of cars. The hand brakes of the period were far from efficient. Sometimes the cars continued off the end of the dock, and landed at the bottom of Marquette harbor. At intervals later cargoes of iron ore were dredged up where the old cars leaped to a watery grave.

# Horns and Antiers

Horns, such as occur on cattle, sheep and Old World antelope, have a bony core. Over this is a laver of a material called keratin, which is similar to the calluses that occur on the palms of the hands or the soles of the feet. The antelers of the deer are different, as they consist of a growth of connective tissue which becomes hardened with the deposition of calcium. Antlers are shed annually and grown anew. as also are the horns of some animals, such as the prong horned antelope.

2. Gasoline or kerosene should

3. Gasoline or kerosene should never be handled in the presence of an open flame or other source

4. In pouring gasoline, make sure the pouring and receiving receptacles are grounded, to avoid static sparks.

5. Never use gasoline, benzene, or other flammable material for dry cleaning.

6. Never use gasoline or kerosene to start a fire in a stove or else-

7. Make sure cans or tanks used in storage of gasoline or kerosene are painted red, marked plainly and in large letters.

8. Never forget that gasoline or related petroleum products are the most potentially dangerous things you have on your farm.

**Rat Control** 

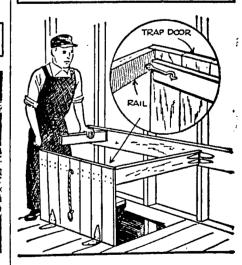

Observance of these rules will cut down farm fire losses.

meat consumed in 1951, 'compared to an almost negligible amount 15 years ago. Poultry breeders have succeeded in developing chickens that eat less and still grow from two to three weeks faster to reach marketable size.

H. H. Alp, Director of Commodity Departments for the American Farm Bureau Federation, recently credited the success of the new industry to the nationwide Chickenof-Tomorrow program sponsored since 1945 by A & P Food Stores.

Only a few years ago, according to U.S. Department of Agriculture reports, most of the chicken meat consumed in this country came from so-called "backyard flocks." Records of specialized broiler production in 1934 show that these chickens accounted for only 3 per cent of total consumption of 18.8 pounds of chicken per capita. In 1951 broilers are expected to account for 51 per cent of a per capita consumption of 29.7 pounds.

**Hayloft Door** 

If you have a trap door in vour barn loft, here is an idea that could possibly save you a dangerous fall. Fit it with guardrails as shown above. The rails, which are hinged to the barn wall, swing outward and are hooked to the trap door when it is in the upright position. When the door is closed the rails are folded flush against the wall.

# **Frozen Foods Show Huge Gain During Past Year**

A record percentage of farm produce is moving to consumers in frozen form. Figures compiled by A & P Food Stores, operator of 4,500 markets in 37 states with six million customers daily, show an overall in-crease in frozen food sales of 38.9 per cent. Leading this list of foods are citrus juice concentrates orange and grapefruit juice, a blend of the two, and lemon mix. Peas, and strawberries also increased.

The farmer who has 20 rats

on his farm is feeding them at a cost of \$40 a year. In other words, it costs farmers \$2 a year to keep one rat. Three rats eat and destroy as much feed as two laying hens require in a year's time. This is sufficient reason for every farmer to execute a rat-killing and control program.

**Poultrymen Are Advised** 

better chance this way.

**To House Best Pullets** House only the best pullets that probably will produce well for the entire laying year, poultry experts advise. Those chickens that are under-developed, or generally un-thrifty looking, will seldom produce well and should be marketed. And when housing pullets, it is generally wise to keep together those of the same age and stage of

# American Inventions Make For Better Living Standard

During the period prior to World War II, when Adolph Hitler was building up an arsenal of weapons with which he hoped to conquer the world, a nuclear physicist at the University of Berlin had an idea for a death-ray gun.

The only thing wrong with the idea was that the inventor intended to use the death rays to kill microorganisms that spoil food, Hitler wasn't interested.

America thrives on inventions that promote health and make for better living. It provides a Patent System as an incentive for such inventions. Dr. Arno Brasch, the nuclear physicist with the death-ray idea, and his associate, Dr. Wolf-gang Huber, left Berlin for New York 12 years ago.

Food is an important item of trade, here, and financial interests backed the two physicists in developing their electronic gun to the extent of a half-million dollars, They rented an icehouse on Long Island and scrounged the area for hard-to-get parts required for their electrical apparatus. The pilot model, resembling somewhat the steel skeleton of a skyscraper, began to tower toward the third-story ceiling. Near this was a cylindrical structure, tapering in sections to the top.

Out of this combination of transformers. insulators, and giant electronic tubes there protruded something similar to the muzzle of a gun, aimed straight down to hit the target directly underneath. A 220wolt house current was thus stepped up to shoot 3,000,000 volts.

It was five years ago that this amazing gun began its operation of shooting electron bullets into specimens of food.

## Poison Deaths of Children **C**aused by Careless Parents

Parental carelessness plays a big part in the more than 600 deaths of children each year due to the accidental swallowing of poison, ac-cording to Dr. Jay M. Arena of Durham, N. C.

Dr. Arena is associate professor in the department of pediatrics, Duke University School of Medicine and Duke Hospital.

"Children who survive the ingestion of poison may be left with permanent disabilities," he added.

"Poisons contained in household agents are responsible for most of the deaths and disabilities. If all drugs and household agents that contain poison were made inaccessible to children, such poisonings could be almost entirely prevented.

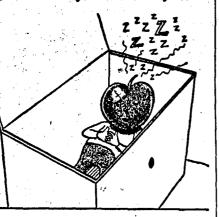

Lye, he explained, is one of the most common causes of poisoning childhood. During the first 1

# **Controlled Storage Keeps Apples Prime Regulated Atmosphere** System Is Recommended

The answer to whether apples will taste as good in May as they do in September is "yes"—if they are apples from specially constructed controlled-atmosphere storage. That is the opinion of Prof. R.M. Smock, of Cornell university's agricultural experiment station.

More than 100,000 bushels of apples are in 15 such storages in New York state, the first of their kind in the country. "When they come

It sort of puts the apple to sleep and it never wakens until brought out into store temperature.

out in April or May or June," Smock says, "the apples are expected to be of prime quality."

Results of 10 years of experiments show that controlled-atmosphere storage will double the ordinary storage life of McIntosh, provided the rooms are properly constructed and operated. Good re-sults also were obtained with Delicious and Northern Spy when the varieties were stored separately.

# Sweet Potatoes Make Valuable Farm Crop

Many North Carolina farmers who have never planted sweet potatoes for market should be able to increase their farm income this year through the cultivation and sale of this root crop, according to H. M. Covington, extension horticulture specialist for the state college extension service.

The U.S. department of agriculture has requested farmers to increase their production of sweet potatoes by 12 per cent. Even if such an increase is planted, production would still be about 10 per cent under the 1937-46 annual average.

Medina Mosque is Younger **Building than White House** 

According to tradition, Moham-med journeyed north from Mecca to the region of Yathrib's oasis, where he loosed his camel to wander unguided until it stopped and knelt. There the mosque was built. Disciples renamed Yathrib Madinatal-Nabi, meaning City of the Prophet, now varied to Medina.

The original house of worship has been rebuilt several times. No existing relics of previous structures bear proof of use earlier than 1306. The present Great Mosque is actually newer than the White House in Washington and replaces an earlier mosque which was destroyed by fire only a century ago.

Though somewhat crowded by other buildings on its south side, the mosque stands out gracefully from most angles of approach. Its minarets are shapely, its dome a restful, dull green. Dominant construction material is a locally quarried crystalline rock of pinkish hue, with occasional elaborate inlay and faience decoration.

Pilgrim trade is easily the chief business of Mecca, Medina, and Jidda, the Red Sea port by way of which nine-tenths of the worshiping tourists now travel. The two shrine cities each have sacred areas where unbelievers are not welcome and subject to trespassing fines or jail terms.

Date growing is the second indus-try around Medina's oasis, which is larger than Mecca's and can support more population. Under Turkish rule prior to World War I, Medina counted 30,000 people and was the southern terminus of a railroad from the cities of present Jordan, Syria, Turkey, and Iraq to the north.

Not until Mohammed moved from Mecca to Medina, did his creed begin the expansion that now encompasses 250,000,000 followers.

# Drug Given By Mouth Said To Relieve Pain in Cancer

A chemical compound which can be given by mouth is reported by seven New York doctors to be use-ful in bringing temporary relief to patients suffering from fatal can-cer-like diseases of the white blood cells and tissues.

The oral use of triethylene melamine on 58 patients is described by Drs. David A. Karnofsky, J. H. Burchenal, George C. Armistead, Jr., Chester M. Southam, J. L. Bernstein, L. F. Craver, and Cornelius P. Rhoads. The doctors are all associated with the Memorial Center for Cancer and Allied Diseases, New York.

Triethylene melamine is a valuable addition to the small group of drugs now known to be effective in relieving pain in these types of dis-

**Cecil** Choate

THE KENDRICK GAZETTE THURSDAY, NOVEMBER 18, 1954

years of the Duke Hospital, more than 136 children were treated for stricture of the esophagus caused by swallowing lye. Many of these cases were due to sodium hydroxide in washing powders, drainpipe cleaners or certain paint removers.

Among other causes of childhood poisonings listed by Dr. Arena are the following: strong acid, kerosene, lodine, strychnine, phenolphthalein, barbiturate, salicylate, aniline dye, lead, and mercury.

#### Farm Land Boom

Farm land prices on an over-all basis may have experienced a record rise over the last decade, but the increases varied widely as between one section of the country and another, according to figures compiled by the Bureau of Agricultural Economics of the U.S. Department of Agriculture. The boom was led by eight states, headed by Kentucky, which enjoyed increases of more than 200 per cent between the 1935-39 average of dollar farm land valuations and July of this year. More than half these states are in the South. Thirteen others, mostly in the South and Middle West, showed rises of between 150 and 200 per cent, and fourteen more between 100 and 150 per cent. The remaining thirteen showed gains of less than 100 per cent.

High Hat The expression "to high hat" or be snobbish toward one of lower rank probably goes back before the days when the top hat became a symbol of wealth and social position. The rank of a Spanish lady in the latter days of the Roman Empire could almost be measured by the height of her head covering. The more important the lady, the higher her turban towered above her head.

#### Sea Food

The ocean contains enormous quantities of small plants and animals, many of them microscopic in size, which cannot swim but float with the tides and currents. These are called "plankton" and they form the principal food of various whales, as well as sharks and many other kinds of fishes. 'The animal plankton is said to have a nutritive value equal to the best meat, since they consist largely of protein, while the plant plankton equal rye flour. The main difficulty seems to be in harvesting. A biologist who studied the matter has said that to meet the normal food energy requirements of one person would require the animal plankton each day from a volumne of ocean water equal to an area the size of a football field, and about five feet deep.

Farmers who plan to increase their sweet potato acreage this year to have some for sale, should consider market outlets before planting, Covington states.

Automatic Defroster

A household device which automatically defrosts the refrigerator and is a fine electric clock has been put on the market.

The defroster, the company stated, eliminates the housewife's periodic, usually messy defrosting chores which are so often put off until she finds time and a thick, insulating coat of frost has accumulated on the freezing unit.

Automatically, the defroster turns the refrigerator off at 1 a.m. each day, and then, again automatically, switches it back on after the thin skin of frost is removed from the unit.

During the shut-off periods, moisture created by the melting film is circulated through the box.

With the defroster, which is a precision timing instrument, any electric refrigerator, old or new, easily can be made self-defrosting.

# **Chlordane Is Effective** Ant, Cockroach Killer

The newest and most effective insecticide against cockroaches and certain kinds of ants is "chlordane.'

Two-per cent chlordane sprays, with oil or water base, now are for sale in many department, drug and hardware stores.

These sprays leave an invisible. odorless film on surfaces to kill pests which come in contact with

ease, according to the doctors. This is due primarily to the fact that it can be given by mouth, releasing the patient from his dependence on a doctor for administration of the drug. All the other drugs, they point out, have to be injected intravenously, which almost always makes hospitalization necessary. Clinical trials with the drug are now being widened to include a greater variety of tumerous condi-tions, they said.

## Cleaning Up

In the Smithsonian Institution's laboratory of vertebrate paleontology, six tons of fossil bones belonging to the extinct gigantic ground sloth, Megatherium, are being cleaned and repaired. The skeletal remains of this grotesque animal were collected in western Panama by Dr. C. Lewis Gazin, curator of vertebrate paleontology of the U.S. National Museum, assisted by Dr. Theodore E. White, paleontologist of the Smithsonian's River Basin Surveys. The Smithsonian Institution paleontologists will attempt to reconstruct for exhibition in Washington a complete skeleton of the giant sloth. A large part of the collection will be returned to Panama for exhibition there.

#### Forming Pearls

Although some pearls are formed in fresh-water clams and oysters, the most valuable come from the marine pearl oysters of eastern Asia. They occur when some foreign object-perhaps a tiny grain of sand -gets between the shell and the body. The animal then secretes around the object successive layers of a material called nacre, which consists of calcium carbonate. This is the same material as the "mother of pearl" lining of the shell. The Japanese make "culture" pearls by deliberately introducing small particles of graphite into the oyster and keeping it for several years as the pearl is formed.

#### Intrared Rays

Infrared rays are similar to rays of visible light, except that the length of their waves is greater than those of red light, which are about 1/40,000th of an inch and are the longest that the eye can detect. The longest infrared waves are about 1/65th of an inch long. Any hot object-the Sun, an open fire. a red hot poker, a warm radiator, an electric lamp, etc. - sends out infrared radiation, often with visible rays as well. Special electric lamps to generate these rays, used for applying heat, have a filament which operates at a lower temperature than is used in one designed mainly for purposes of illumination.

GAZETTE

# in 54,000 classrooms

Radio was barely out of the earphone stage 26 years ago when a new program was beamed from a San Francisco studio. It featured a string trio and was based on the idea that good music, when clearly understood, could entertain and teach, too. Actually, only 72 Western schools had radio sets then, but with that performance the Standard School Broadcast went "on the air," to serve students and teachers of the West with a brandnew idea in educational aids.

Today, when Conductor Carmen Dragon lifts his baton, it's "time for the Standard School Broadcast" in over 54,000 classrooms through the West, Alaska and Hawaii. Counting children, teachers and home listeners, the program reaches a weekly audience of nearly 11/2 million. That string trio has grown to a symphonic orchestra with a dramatic cast, choral group and guest vocal and instrumental artists. Selections range the musical alphabet from symphony to jazz. Each year's course follows a carefully planned outline published in a man-

ual supplied to teachers by Standard to serve as a guide in blending music-enjoyment with subjects like art, literature, social studies. Now in its 27th year, the Standard School Broadcast is radio's oldest education program, heard today over more than 100 stations. Its goal is to help Western children gain an absorbing new interest in the world's good music andthrough music-a broader knowledge and understanding of the world around them.

Listen to Standard School Broadcast every Thursday. Check your newspaper radio log for time and station.

#### HELLO, FOLKS:

You've all heard that old saying: "You can't make a silk purse out of a sow's ear." Now that's very true, but the chances are that you can improve the performance, par-ticularly in winter, of your car, pickup or truck, by letting us drain out that old oil and refill it with Royal Triton — the oil that flows freely — yet retains it's lub-ricating qualities under all con-ditions. One try will convince you it's truly a "Royal Oil."

"Stand behind your lover, false woman," thundered the Scotsman, "I'm going to shoot you both!"

How are the spark plugs in your car, truck or pickup? If they've gone from 8,000 to 10,000 miles you'll find it economy to change to You'll like its those famous AC's. They give you heat qualities.

Bring, in that vehicle and let us install the proper set for you. A witness was about to give testimony in court, and as he did not appear to be too bright, the judge thought best to impress him with the solemnity of the proceedings. "Do you know what it means when you take that oath?" he said. "I certainly do," replied the witness. "That oath means that if I

easy winter starts, save gas, too.

swear to a lie I've got to stick to it, no matter what." \* \* \*

How's that fuel oil tank of yours? Is it full and ready for the winter weather that surely lies ahead? If not just call us, 1251, say "Fill it," and we'll do just that. You'll like its clean burning, high
