A Good Turn For Motorists

Most people consider a car the secondbiggest purchase they'll ever make. Anything that extends its life or improves performance naturally contributes to your pocketbook as well as your motoring pleasure. Since our new "Detergent-Action" Gasolines do both, they're prime examples of Standard's planning for you. These new gasolines are made in complicated plants called catalytic reformers. Standard has built 4 of them in the West to make the cleaner-burning, more powerful motor fuels required for best performance of today's higher compression

engines. This program was two years in

planning and building—cost \$50 million.

This \$50 million worth of plants is only part of the \$350 million Standard is investing this year to make petroleum more useful and plentiful. Some of it will go for product research, part will pay for new manufacturing facilities. A good share will finance the search for new sources of oil to help supply the 733 gallons a year per person that go into thousands of oil-born products essential to modern living.

So the \$350 million is an investment in your future as well as ours. It's one way Standard helps to guarantee that there'll be plenty of oil to do more jobs today and in the years to come.

STANDARD OIL COMPANY OF CALIFORNIA plans ahead to serve you better

Your Handy Helpful Hardware Man suggests: HOW TO MAKE A CALIPER

A folding rule, once broken, is generally considered useless and simply thrown out of the home workshop. However, here is a handy comparative caliper, useful for taking both inside and outside rough measurements, made from just such a broken folding rule. Two 6-in. sections are easily cut to the shape shown in the sketch by cutting on a jigsaw or by filing. Fine sandpaper can be used to smooth off any remaining rough edges.
