Wheat Growers To Meet

wheat producers of this area in the Moscow Grange Hall, Moscow, Wednesday, Feb. 15, at 1:15 p. m. This meeting is an outgrowth of the for special birthday "Blue and Gold"

week ago, when Secretary of Agri- friends. culture Benson, spoke. Here the different counties will

together to work out the common basis as per request. All wheat producers of this section

are urged to attend. At the time of the talk by Mr. Benson half a dozen farmers from throughout the area expressed their concern over the "inequities" of the allotment system. They included B. T. Henry of Pullman; Elvon Hampton of Genesee; Melvin Ensley, a member committee; Lawrence Largent, Colfax; Mr. Longeteig of Nez Perce, and

Mr. Gabby of Lewiston. They said they were concerned because a farmer who had planted heavily to wheat and ignored conservation practices, received, on a "historical planting" basis a larger wheat allotment than the "better farmer," who had voluntarily reduced his wheat-planted acreage and practiced better farming.

Such items as the above are to be (we understand) on the agenda.

Squirrel Provides Big Part Of Nation's Yearly Game Bag

Although it is generally recognized as a prolific game species of extensive range, comparatively few people realize the truly important part the squirrel plays in the nation's game bag.

Several years ago the Remington Arms Company, Inc., conducted a survey of national wildlife resources and sportsmen's hunting preferences. The survey revealed that the squirrel ranked second only to the rabbit as the most sought-after game species in the country.

A recent analysis of "Hunters" Scorecards" returned to the office of the Mississippi Game and Fish commission placed the squirrel in an outstanding position in the hunting activities of the sportsmen of the Magnolia state. The analysis brings to light the fact that 79 per cent or 150,000 of the licensed hunters in Mississippi sought squirrel during the 1950-51 hunting season. The cotton-tail rabbit and the Bob White quail practically tied for second high rank, with the rabbit nosing out the quail by the slight margin of 47.15% to 47.12%. Next in line was the lowly 'possum with the somewhat surprising score of 23.06%, topping the dove's rating of 21.58%.

A breakdown of the analysis in hunting activity percentage and estimated total statewide kill follows: deer 6%, 1,370; wild turkeys 1.35%, 249; quail 47.12%, 2,119,532; squirrel 79.83%, 2,418,574; rabbit 47.15%, 900,360; coon 16.2%, 208,712; possum 23.06%, 386,145; dove 21.58%, 522,876; ducks 8.97%, 182,-

Patients On Salt-Free Diet Given Hope for Meal Variety

Patients on a monotonous saltfree diet were given the hope of adding more variety to their meals in two reports on further experiments in the recently developed exchange resin therapy. Exchange resin compounds have been administered to patients having congestive heart failure, cirrhosis of the liver, or kidney ailments which cause excessive fluids to collect in the system. The resin compounds eliminate the sodium which locks in the fluids. Because of this action, it becomes possible for the patient to take more sodium in his diet than would otherwise be possible.

In a report on resin therapy presented by Drs. Carl Voyles, Jr., and Edward S. Orgain, Duke University School of Medicine, Durham, N. C., it was concluded that, "Resin therapy is a useful adjunct to conventional therapy in the management of chronic congestive heart failure, and it can be used safely in conjunction with strict sodium restriction in patients who are followed closely. Resin therapy also makes possible the addition of sodium chloride in amounts sufficent to render the diet more palatable," the report added, and it facilitates the action of mercurial compounds that help in fluid elimina-

The second report on exchange resin therapy reviewed studies by Drs. B. L. Martz, K. G. Kohlstaedt, and O. M. Helmer, at the Lilly Clinic for Cardiovascular Research, Indianapolis.

Sleep Anywhere

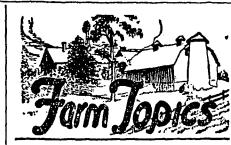

One of the most energetic causes of sleep is fatigue. It is said that prisoners upon the rack have slept through sheer exhaustion while undergoing the horrors of torture. In a like manner, if one is tired enough he will be able to sleep on the floor or on any manner of uncomfortable bed, although he will not thoroughly relax. To the person who has known the luxury of sleeping on a good quality bed, though, sleeping on a worn out, sagging mattress and spring is almost as much torture as going to sleep on a prisoner's rack.

War and Peace

Development of the flame thrower, which first became a military weapon during World War II and has been used extensively by the Army in Korea, led to the peacetime perfection of a highly proficient weed killer. Tests at the Army Chemical Corps Center, at Edge-wood, Maryland, proved that a thin jet of burning, jellied gasoline would kill weeds between rows of plants without harming the plants themselves.

Deciding Issue If it had not been for the magic

of the name "George Washington' the fabulous Phineas T. Barnum may have lived out his life in obscurity as a poor country storekeeper. One day, the man who was to become known as "the greatest showman'on earth" heard an interesting story of a remarkable Negro woman, Joice Heth, who claimed to be 161 years old. When he went to see her, purely out of curiosity, she asserted that she had been the nurse of George Washington. Barnum became so excited upon discovery of documentary evidence to back up her claims, he decided to sell his store and exhibit the strange old woman in the east The tour proved so successful, and stirred up so much interest, he was inspired to engage in other similar ventures. Finally, he formed the partnership with James A. Bailey out of which grew the most famous circus in America.

Synthetic Sow's Milk Is Used Successfully 3,000 Piglets Raised

On Experiment Formula The development of a synthetic sows's milk, made possible by the wonder drug terramycin was annuonced recently by Herbert G. Lu-

ther, research scientist associated

with the Pfizer & Co., laboratories

of Brooklyn, N.Y. The formula, called Terralac, was tried on 500 piglets at the company's laboratories. In addition, 3,000 piglets have been raised successfully

Piglets on test in the laboratory of Chas. Pfizer & Co. For this photograph the front of each of the top two cages has been removed. Bottom shows normal

without sows on several large pig farms which cooperated in the test-

ing of Terralac. Luther contends the formula may revolutionize the swine-raising industry. In the first place, his experiment reduced infant pig mortality to an astonishing 5 per cent, as contrasted with the national average of 21 to 33 per cent. It also largely solves the problem of the runt, long a bane to hog-raisers. by making growth-stimulating terramycin and milk equally available to all pigs in the litter.

Luther emphasized that good pig farm management is essential for the successful use of Terralac. Constant temperature must be maintained, either via the use of heat lamps or by blowing warm air. And it must be prepared properly and fed at regular intervals.

Average U.S. Farm Bigger As Number Falls

The Bureau of the Census reports a decided trend toward fewer but bigger and better equipped farms between 1940 and 1950.

The number decreased by 713,000 in the decade, the bureau reports, but the average size unit grew from 174 acres in 1940 to 210.5 acres in 1950. There were 5,384,000 farms in

1050, against 6,097,000 in 1940. The sharpest decrease came in the five years between 1945 and 1950, when the number of farms

dropped by 475,000.

Other statistics in the report included: About 870,000, fewer persons were

working on U.S. farms in 1950 than Less than one-third as many horses and mules were on farms in

1950 as in 1920. In 1950 there were 59.764.000 cattle and calves more than 3 months old on farms as compared to 60,-

674,736 in April, 1940. The number of chickens o farms was 2,500,000, or 0.7 per cent more than in 1940.

Plenty of Pull

One of the newest aids to farmers is the power curve tire developed by B. F. Goodrich engineers to provide maximum traction and prevent bogging down of heavy tractors and combines in the sticky mud or sandy soil of rice fields. The tire is reported to be the first suitable for use in all types of soil used for growing rice.

Veterinary Group Sets Up New Defense Committees

A nation-wide network of defense emergency committees has been set up by the veterinary medical profession to help safeguard this country's livestock health and food production in case of war, the AVMA reports. The committees will assist on defense measures in case of biological warfare, atomic warfare, atomic blasts, or other wartime emergencies concerned with the nation's animal population.

Most Life Policy Benefits Go to Widows, Children

Reflecting the basic use of life insurance in family financial planning, wives, children and other relatives appear to be the directly named beneficiaries in more than 80 percent of all life policy death claims, the Institute of Life Insurance says. This is indicated by an Institute analysis of one month's claims in the United States.

Applied to the year's probable total of death claims, the one month's distribution would indicate that this year, wives, children and relatives will be beneficiaries of some 1,200,000 life insurance policies, with total benefits about \$1,400,000,000. Wives and children alone would account for \$1,225,-000,000. In addition, they will receive a considerable share of the percent of claims and 14 percent of benefit payments which go to estates and other beneficiaries, excepting husbands.

Husbands were shown to be beneficiaries in 11 percent of the policies, although they received only 4 percent of aggregate benefits, reflecting the smaller average size of policies owned by women.

The month's claim analysis also revealed that, while the majority of death claims were paid on policies which had been in force a number of years, there was a large number in the early life of policies, even in the first year. Although great care is taken in selecting applicants, with those to whom policies are issued being in apparent relatively good health, nearly 5 percent of policies be-coming death claims were found to be less than a year old. This would indicate that this there will be some 70,000 death claims within a year of issuance of policies, with nearly \$100,000,-

Nearly one-sixth of all claims were shown to be under policies less than five years old. Almost 40 percent of the claims and just over 40 percent of the amount of benefits paid were under policies in force 20 years or more.

Preventive Measures Urged As Safeguard Against Stroke

The best way to avoid a stroke, third among leading causes of death in this country, is to recognize its possibility and make physical readjustments that may help to

In the absence of serious systemic diseases such as diabetes and syphilis, there is not much chance of the average person having a stroke before 45 years of age, according to Dr. William Bolton, associate editor of the magazine. Today's Health. But, virtually everyone past middle age is a possible candidate. The following precautions were recommended.

1. Obtain prompt, active treatment of systemic diseases.

2. Do not become or remain overweight. 3. Watch blood pressure that

tends to become high. 4. Obtain regular physical check-

"Strokes vary from widespread, devastating ones that bludgeon their victims into oblivion to tiny ones producing such vague, indefinite signs that they often escape immediate detection," he said. "The basic cause in both extremes is identical: escape of blood into the brain tissue. The amount of bleeding and its location near to or far from vital centers or important nerve pathways are the chief factors that determine severity in

"Not all strokes are the result of direct escape of fluid from blood vessels into brain tissue. Some physicians lean strongly to the belief that temporary spasm in a blood vessel may be a common

"Another fairly common event is formation of a clot within one or more of the tiny arteries in the brain. "There is increased possibility of

stroke in certain diseases."

Tough Case

ried into all sorts of climates and that they must withstand the hard knocks incident to travel, the manufacturer of one such machine has devised a special carrying case that is able to "take it." Built of birch and basswood, high frequency radio waves are used to set the adhesive that binds the panels so they can never pull apart. The case is then dipped in a synthetic resin sealer that checks decay and minimizes moisture absorption. It is

then primed, sanded, and painted with a spatter finish. Allowed to cure for three weeks, the finish is hard and durable. Even after years of intensive service, it does not become brittle or chip away from the wood.

Six months before World War II began, the Army contained 29 infantry and cavalry divisions at nearly full strength, totaling more than 450,000 officers and men, plus an armored force of four divisions with a total strength of 40,000 troops. The Army history, "Washington Command Post: The Operations Division," credits mobilization of the National Guard and induction under the Selective Service Act for this rapid expansion of strength.

Pre-War Army

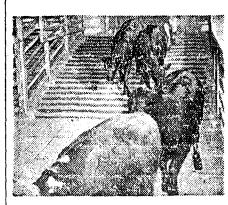

Step-Ramp Loading Chutes Are Safest Many Livestock Yards Are Remodeling Ramps

Livestock markets across the nation are continuing in their program of modernization and the installation of step-ramp chutes to replace old wooden chutes that cause great damage to animals.

Cattle prefer steps to the oldstyle cleats. Many animals are injured and much meat lost from bruising due to the constant prodding necessary to get the animals up and down the old ramps, cattlemen have reported.

The Chicago stock yards recently opened 12 of the modern step-ramp chutes. Of concrete and steel construction, the new chutes are designed to ease the task of unloading stock, and insures safe and

Cattle prefer steps to the oldstyle cleats and amble safely down a ramp of the new style unloading dock without the usual prodding. This type of ramp is becoming very popular in markets across the nation.

efficient operations. Galvanized steel fencing and grates add to the safety features of the dock area. Waffle-grid concrete floorings provide safe footing for animals during the penning process.

The first truck to unload over the ramps brought 24 head of Hereford and Angus steers shipped by Carroll Snola of Onslow, Ia.

Cracked Corn Found Best Feed for Suckling Lambs

Tests made at the University of Kentucky experiment station indicate cracked yellow shelled corn is the cheapest and best ration for the creep-feeding of suckling lambs. Experiments carried on over

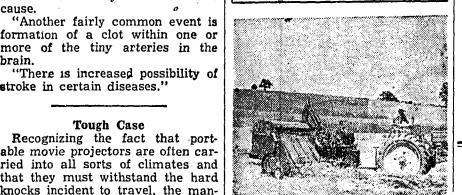

period of nine years compared cracked yellow corn with mixtures of feeds. These included cracked corn, crushed oats and pea-sized linseed oilmeal; cracked corn and commercial milk substitute, and a third ration composed of "sweet feed" made of corn, oats, bran, linseed oilmeal, molasses and salt.

The experiment was conducted under the most controlled conditions possible, Kentucky educators re-

The conclusion of the experimenters: "None of the three more costly mixtures showed any consistent or significant superiority to corn alone in rate of gain, efficiency of gain or market finish of the lambs.'

The experiments were not designed to answer the question of whether creep-feeding pays, but rather to determine what rations are best for creep-feeding under Kentucky conditions.

Baler

This automatic baler is a good example of how machinery is saving manhours on the farm. The baler can package a ton of hay in less than half the time needed by hand methods. With only the tractor driver in the field, this machine automatically picks up hay, slices it, presses it into compact packages and then ties the bale with two strands of twine. Further information is available at local machinery dealers or in the local hardware stores.

Rice 1s Most Important Food in the World Today

Although most Americans believe the statement exaggerated, rice is the most important food crop in the world today. It is the basic food of more than half of the world's population. In recent years the cultivation of rice has increased in this country, but in Asia it is the Important crop because it is virtually the only food millions of people have—their means of sustaining

Watch Those Winter Fires Jim Hurst, assistant county agent

Fire is a good servant but a bad an NRA hunter-safety course, and go master, and the same is true of oil along yourself for a brush-up and to stoves and heaters. Since a high percentage of farm fires start from oil-

exit from a room in case of fire. 2. Burners should be on firm, level flooring, away from curtains, bedding

and other easily ignited material.

3. On heaters which have small tanks attached, do not refill tank until heater is off and cool. Use a funnel and a metal can with a pouring spout when pouring oil. Use the grade of oil specified by the manufacturer. Never fill the tank right to the brim—and remember that heated oil expands.

4. Oil burning equipment should be cleaned often. But don't try to do any complicated repairs yourself. Call a regular serviceman.

5. Be sure you always follow the manufacturer's instructions exactly when operating any oil burning equip-

6. Don't permit children to operate them or play near them.

Fish And Game News

The close of the waterfowl hunting season on Saturday, Dec. 31 put a period to the hunting season for this winter, except for cottontail rabbits. Shotguns can go into dry dock, along with big game rifles, for another long rest, unless you are one of those who hunt preditory animals (coyotes, bob cats, cougar, coon). However, a good many guns will still be in action new guns that Santa Claus brought to proud youngsters. If your son is one of these, how about taking him

Professor Believes Too Much Leisure Time Poses Problem

UNIVERSITY PARK, Pa.-Leisure time can be a liability and for the first time in the history of America, or any other nation, the average U.S. worker has more leisure time than working time.

"And this," says Fred M. Coombs, professor of physical education at the Pennsylvania State University, "can lead to a degeneration such as has befallen nations of the past which have achieved great amounts of leisure time for their peoples."

Pointing to a great need for increased recreational facilities, Coombs explains that the creation of such facilities can have lasting benefits, not only for individuals, but for communities and the people as a whole.

Citing the example of Lake Wallenpaupack, an artificial lake developed in Northeastern Pennsylvania, Coombs says that it not only provides recreational benefits, but has increased real estate values of the area 300 times. Vacationists spend \$4,000.000 annually there and now 1,100 cottages are found where there had been 100 houses.

Individuals can do much about their own recreation by interesting themselves in hobbies. He suggests hobbies in which the individual is a participant rather than a spectator, one in which he can be successful since it's no fun to be a dud, and one that the individual can afford.

Family hobbies and activities are important, Coombs believes, since "the family that plays together, stays together."

Blushing Fashion In 16th Century

LOS ANGELES-A lady had to be a lady in the 16th century.

In the eyes of Barnaby Rich, a soldier turned author who earned fame in Queen Elizabeth's day as an expert on the fair sex, any woman who "powders her periwig, paints her face . . . and deformeth her selfe evry day with new fashions" was anything but a lady.

Rich first achieved fame in 1581 with a best-selling collection of stories dedicated to "the right courteous Gentlewomen, bothe of Englande and Irelande." One of his firmest convictions was that any woman who couldn't blush was not an honest woman.

enough to make an honest woman blush merely to image that she cannot blush.

He maintained in his books that his criticisms of women were based on scientific investigations. According to Dr. Paul A. Jorgenson, associate professor of English on the Los Angeles campus of the University of California, and author of an article on Rich, the early authority on women was soundly beaten on at least two occasions in Ireland by angry hus-

Scientist to Rescue Of 'Batty' House

COVINGTON, Ky. - The household of Mrs. Royal Atkinson was in a constant uproar for more than a week. The place was batty, with bats all over the place. They flitted into the living room at uncomfortable times, causing embarrass-

Then she read in a newspaper about a woman scientist at the University of Cincinnati who was crazy about bats-even kept them in her refrigerator, for scientific purposes.

Mrs. Atkinson got in touch with Dr. Elizabeth Smith. Dr. Smith's arm was in a cast, but nevertheless she had easy pickings gathering up the bats. She found 22 of them, 11 of them babies, in two clusters at one end of the attic wall. She plucked them off with ease, weighed them, tagged them and then turned them loose in a barn that was already a bat hang-

Crows Won't Bother Stringy Melon Patch

CROWS WON'T BOTHER-guide WINNSBORO, La.-Crows are smart, but they're also superstitious, says Hub Dear.

This, he points out, makes them a cinch to keep out of watermelon patches. Just drive stakes at intervals through the patch and stretch string from stake to stake.

"Thinking the string is some kind of trap, he will not light in the patch where the string is placed," said Dear. "The crow is a smart bird but he is also very superstitious.'

Dear discovered this version of the traditional scarecrow in 1917 and has used it successfully since that time.

Doubling Up

WILMINGTON, N.C.-Thieves unable to open a motor sales company's safe containing \$13,525 during a weekend burglary, solved their problem by stealing one of the firm's new station wagons and carting the loot away.

Footloose Folks **Still Following** Greeley's Advice

NEW YORK-"Go West, young man," Horace Greely advised his contemporaries of the 19th century. With the 20th century more than half over, the mass westward migration Greeley helped promote is still going strong.

Over the past 15 years there has been a marked shift of population to the Far West, principally from the South and Midwest, with California gaining more people through migration than any other state.

From 1940 through June 1945, when defense production was booming in California, the net inmigration of civilians to that state averaged 385,000 a year, but even in recent years the average has been 284,000 a year. As a result of this movement and a sustained high birth rate. California gained 1,968,000 in population from April 1950 through June 1954—almost one fifth of the increase in the entire country for those years.

During the same period a number of other states have had substantial gains in population through migration. Florida averaged 130,-000 annually during these years; Michigan averaged 52,000; New Jersey 44,000; and Arizona and Ohio 38,000 each.

By contrast, Pennsylvania and seven southern states-West Virginia, North Carolina, Kentucky, Tennessee, Alabama, Mississippi. and Arkansas have been losing 30,000 or more persons annually by migration since 1950.

The principal cause of migration is job opportunities, although in recent years there has been an increase for older, retired people to settle permanently in milder climates, particularly in Florida and Southern California.

First Deathless Congress in Years

WASHINGTON-For the first time in more than 20 years, no members of the Senate or House died during the session which ended last August 3.

The year before there were nine deaths among senators and representatives.

One member-elect of the 84th Congress, Dwight Rogers of Florida, died in December before Congress convened in January. His son, Paul G. Rogers, was elected to succeed him.

Not since the house membership was increased to 435 more than two decades ago had there been a session of Congress during which no senator or representative

Since 1929, when the practice of conducting annual memorial services for deceased members started, an average of 10 members have died each session, As reflected by the memorial

services, the peak number of deaths was 21 Senators and House members in 1937. The lowest was previously 3, in 1943.

Drive-In Movies Try Gimmicks for Crowds

PITTSBURGH-The popcorn machines that have kept millions of Americans contented at the movies are giving way to more spectacular gimmicks in the campaign to lure customers into drive-in the-

Drive-ins along the shores of Lake Erie have gone in for complete restaurants where you can get pizza, shrimp rolls, chicken in a basket, along with the usual popcorn and candy.

Even baby sitters are provided to watch over children while their parents relax in their automobile to watch the giant outdoor screens. Some theaters have playgrounds with merry-go-rounds, swings and scenic railways.

One enterprising outdoor-theater owner near Pittsburgh went the limit-by stocking a pond with trout and building a swimming pool for overheated patrons.

Animal Reaction to High Flight Recorded

MINNEAPOLIS-Mice and guinea pigs which soared almost 25 miles above the earth in a free balloon ride landed safely in North Dakota after a 26-hour flight.

The flight was conducted by Winzen Research, Inc., for the Air Force to determine the animals' reaction to high altitude.

The plastic balloon, tall as a 25story building, landed near Crosby, N.D. 26 hours after leaving International Falls, Minn.

The balloon attained an altitude of 125,000 feet. Defense sources in Washington said monkeys and mice were rocketed to 400,000 feet in March, 1952.

Sneak in Sink

ST. LOUIS-Mrs. Richard Godier went to her kitchen sink to wash the dishes.

The sink was clogged. As she poked around, up popped a snake. Mrs. Godier did the natural thing -she screamed. Her husband came running and captured the 10-inch garter snake.

Gentle Dog Has **'Country Cousin'** With Bad Manners

WASHINGTON-The gentle dog that sleeps by man's hearth and eats from his hand has "country cousins" that tear food from tigers and put leopards and panthers to

Fierce wild-dog packs in Indo-China and Malay jungles are led by canine chiefs. They strike swiftly and back off only before man, elephant and rhinoceros. They move quietly, Indian file at. night, avoiding dried leaves and branches. They have been known to devour an exhausted, 240-pound stag in 15 minutes.

Few except professional hunters and woodcutters ever see the wild dogs and on these rare occasions the dogs usually appear startled, look at one another, and run.

The fierce, strong Red Dogs of India's Deccan largely favor the unlands of the Ghats for hunting. One planter reported witnessing action in which a pack of bold dogs feasted on the fresh-killed prey of a tiger who evidently chose to go elsewhere for another meal rather than tangle with the vicious dogs.

Sportsmen of the Nilgiri Hills of India have exploited the tigers fear of wild dogs by hunting them. with trained ones. Hearing their approach and believing them packs of wild dogs, the tigers flee. or take safety in trees.

The spotted wild dogs of Africa: are relentless pack hunters and. strike terror among animal life with their hunting cries. One night in Northern Rhodesia a camper heard their bark and then a rushing of feet as if an animal were trying to escape. Within moments an antelope bounded into the camp and stood in terror near the men, while snarling dogs circled the

Tortoise Initials Don't Last Forever

LOS ANGELES-If you want to carve your initials for posterity, don't pick a live tortoise's shell.

Dr. Loye Miller, professor emeritus of zoology at the University of California, has been observing desert tortoises for many years. He takes with a grain of salt the oft-repeated tales about tortoises that have survived in the wilds for a century or so as evidenced by initials and dates carved on their shells by historical pioneers.

He has found that such carvings disappear within a year or two due to remarkable regeneration characteristics of the animal.

Dr. Miller says that tortoises: 1. Commonly have bladder stones which do not generally have

serious effect on the animals. 2. Males achieve maturity at about the same age as human males, that is, from about 16 to

20 years of age. 3. Egg laying is a big event with the female. She will not eat or drink for some time preceding

4. Females may lay eggs twice a year and up to 14 eggs at one

Old Steam Operators Hold Annual Meeting

BRYAN, Ohio - Remember the Avery 40? You will if you grew up in the Midwest wheat belt where this old steam-operated thresher held forth before it was displaced by modern combines.

More than 4,000 Americans who remember the steam-power harvesters have joined the National Threshers Association, organized 10 years ago by a handful of old steam operators in nearby Alver-

They had 30 of their old machines at their latest annual meeting. Focal point of the meeting was firing up one of the venerable machines for a short demonstration of old-time steam threshing-the way it was done 50 years ago.

More Newlyweds Buy Their Own Homes

CHICAGO—More newlyweds own their own homes than ever before in the history of the country, due to credit financing, says Richard Nelson, a real estate research

Nelson said:

"Homes are becoming directly competitive with apartments in view of the low down payments and long period of amortization which makes it possible for a young couple with very little liquid savings to buy a home of their

Figures show that between 10 and 20 per cent of the newlyweds plan on their own homes in preference to renting, Nelson said.

Collector's Item

DEAL, England-Bad dealing on Sunday is bad business, the chaplain believes.

The Rev. E. L. Pockock, senior chaplain at the Royal Marine Detachment here, stood up before the congregation and held up an I.O.U. for 6 pence-about 7 cents.

"It was part of last Sunday's collection," he complained.

How About Machines?

Newspapers and magazines lately seem to be full of articles predicting what life in these United States will be like 5, 10, 15 or 20 years from

It sounds good, and we hope most of it works out - and we have the fullest confidence it will.

Won't it be nice to have a small BER, for the tearing down, it's car for town travel, and another long, 6-tf low high-powered job for the highway? And naturally by then there Spring & Summer line Made-to- just enter your course, and keep on

And temperature control in all houses and offices will be really won-- if ordered before Feb. 10. Chris derful - as well as automatic kit-5-tf chens that whip up your dinner at the flip of a switch - for those people who still want to eat old fashioned meals. We suspect newspapermen 5-3x will lean toward pills, which give you complete nourishment in a few gulps

a real time saver! But we are particularly looking for ward to the automatic newspaper. That machine will solve production problems — you simply put the copy in one end, and pretty soon you have a completed newspaper.

"Put me down for a full page today," Foods, Senior Class Sale, Bowling alley, Kendrick, Sat., Feb. 11, bebinning at 10:00 a.m. 6-1 story!"

Now if someone will just invent a

machine that makes merchants say:

Get that fresh Salmon, Halibut or nished. N. Deschamps, Juliaetta. Oysters at Blewett's Market, Ken-5-2x drick. Arrives every Thursday. adv

All-Day Dairy Meeting

Dairymen of Latah County are providing their own program at an all-day meeting in Moscow on Thursday, at Johnnie's Cafe, West 6th Street.

The purpose of this meeting is to help local operators evaluate their own production problems, and if possible, determine ways to increase their margin of profit.

The program has been arranged for selected individuals to serve as 'lead-off" men on specific subjects, and is as follows:

The Dairy Situation, G. W. Kitch, hostess on Wednesday, Feb. 15. Bring Troy; Dairy Herd Management, Paul a Valentine for your Sunshine Sister. Wickward, Moscow; Dairy Housing, M. L. Benjamin, Princeton; Feeding "Valentine Verse." Mrs. Otto Schupfer has charge of louse; Dairy Pastures, Willis Arnethe program and will show how to berg, Troy, and The Milk Situation, make fibre flowers.

Malby Anthony, Moscow.

The annual meeting of the Latah County Dairymen's Association with the election of officers and a director will follow.

This meeting is being sponsored by the Latah County Dairymen's Association. The program was arranged by Malby Anthony, president, G. W. Kitch, and group secretary Elbert Mc-Proud.

Evergreen Friendship Club The Evergreen Friendship Club will meet in the home of Mrs. Nellie Biddison with Mrs. Dick Watson as co-
