Following six years service as pastor of the Kendrick Community churches at an Official Board meetand Mrs. Schmidt will return to their Mrs. A. Onstott left for Moscow former charge at Metlakatla, Alaska. They expect to leave here about October 1st and begin serving the church there the second Sunday in home. October. Metlakatla is an all Indian village on an island. The town itself is modern in every respect - complete with paved streets, electric lights and very modern and attrac-

> nery. In the summer of 1957 the community will observe the 100th anniversary of the coming of Christianity to the island and to the tribe, the Tsimpsheans.

It is with deepest regret that the community learns of the Schmidts' decision. Who will replace them is

New Evidence On Collision New evidence has come to light on

the collision of the car driven by James Lohman, son of Mr. and Mrs. Elmer Lohman, Southwick, and the logging truck driven by Fred Hadley, Juliaetta, between Juliaetta and Kendrick, last Monday evening.

Witnesses located say that contrary to first reports, Fred Hadley did stop, pulling on just far enough any coming vehicles (approximately 200 yards).

Also, contrary to some rumors. Fred did report the accident, making the report to the Latah County deputy sheriff at Deary.

NEW IDAHO HEAD FOR MARCH OF DIMES DRIVE

An Idaho business leader has been named to head the 1957 March of Dimes in Idaho, Basil O'Connor, presi-Clarence Weaver and Mrs. Fred Giele dent of the National Foundation for and children of Spokane; Mr. and Infantile Paralysis, announced this

James W. Heckman James W. Heckman of Boise will coordinate March of Dimes activities in the state's 44 counties during Jan-

"We are fortunate in having the high quality of leadership which Mr. Heckman can provide in Idaho," Mr. O'Connor said. "At a time when total victory over polio appears just ahead, we dare not slacken our efforts or

Mr. O'Connor said he is confident that the people of Idaho will continue to respond as they have in the past bridal shower given in honor of Miss to the fight against this crippling disease. "It would be tragic to assume the job is done on the basis of imporant initial victories," he stated.

In making the appointment, Mr. O'Connor outlined the major responsibilities of the March of Dimes to the nation - to provide financial assistance for past and present polio victims, to continue vital research in prevention, diagnonis and treatment of polio, and to train needed professional personnel.

Vice president and general manager of the Mountain States Telephone & Telegraph Co., Mr. Heckman is a director of the Pacafic Northwest Trade Association, the Boise Chamber of Commerce, and a member of the advisory board of the Boise Development Association. He is chapter chairman of the Ada County Red Cross and a member of the Kappa Sigma fraternity and the Rotary the Student Union from 3:00 to 5:00 Club. He was born in St. Louis, Mo., and is a graduate of the University day. Registration will also be held of Denver; is married and has two

Thermometer Goes "Ker-plop" Climaxing a week of really hot weather, which saw temperatures climb to a high of 102 degrees, the mercury "went ker-plop" Saturday evening following a brief but violent

wind and dust storm. Here is the run-down for the week: Wednesday, low 64, high 102; Thursday, low 60, high 96; Friday, low 64, high 89; Saturday, low 60,

The wind of Saturday night was hot when it hit, and laden with dust. Later the mercury column skidded to a low of 54 sometime early Sunday morning - accompanied by a pour-

Rain has fallen intermittently since that time, a total of 1.93 inches having fallen up until Monday morning about 7:00 o'clock, according to the rain gauge at the Harry Newman ranch on Potlatch ridge.

Potlatch "Running Chocolate"
The Potlatch river began running "chocolate" about 11:00 o'clock Monday morning, induced no doubt by the run-off from newly cut logging roads throughout its drainage area. Previous to that time it had been that local fields were taking in every

Roy Glenn came from Texas ridge Monday morning and called our attention to the stream. He said as he came down the "chocolate" was just about at the Chas. Fey home, and sure enough, about a half hour later here it was.

Homecoming Activities Planned U. of I., Moscow - Initial plans have been made for the annual University of Idaho homecoming weekend, student chairman Richard Gaskins of Pocatello said this week.

The festivities, which each year draw thousands of alumni back to the campus, will begin Friday, October 12, the day before the football game between Idaho and Arizona State college.

A rally is scheduled for 7:00 p. m Friday at MacLean Field, and will include a fireworks display. A pajama serpentine will be held by the freshman women prior to the rally. The annual parade will start at

9:30 a. m., Saturday, at the corner of Main and A Streets. The new Idaho drill team, the "Vandalettes," will march with the Idaho band and several guest bands.

Kickoff time for the game in big Neale stadium will be 2:00 p. m. Half-time entertainment, Gaskins said, will include the crowning of the homecoming queen and the presenta-

tion of awards for the winning floats.
Alumni may register at the Moscow Hotel, the New Idaho Hotel and day, Registration will also be held at the Student Union building from 9:00 a. m. to noon, Saturday.

LONGEST ROAD IN THE WORLD

The Kansas Turnpike, terminating in this wheatfield on the Okla-

homa-Kansas border is, at present, a road with no end, but not for

long. :Just as soon as Oklahoma

allocates the necessary funds, the

new four-lane superhighway will knife its way through the farmer's field and he'll have a new, faster road to get his grain to market.

Alarmed At Highway Accidents

A meeting on traffic safety, aimed at statewide community action to reduce Idaho's alarming highway death toll and accident rate in 1956, has been added to the second annual Governor's Traffic Safety Conference in Boise, Sept. 13 and 14, it was announced today.

The conference, to be held in the Hotel Boise, originally was to have ended at noon September 14, but it has been extended until 3:00 p. m., to include the session on traffic safety, according to W. L. Robison, Idaho state labor commissioner and pro-

gram chairman. Gov. Robert E. Smylie has issued 750 invitations to individuals throughout the Intermountain states More than 300 persons attended last year. James W. Heckman, Boise, Laho, vice president and general manager for Mountain States Telephone & Telegraph Co., will preside at the

special meeting.

He said it is hoped that the session the afternoon of Septembe. '4, will initiate intensified community participation in a highway safety program under the direction of an advisory board, with the Idaho Chapclear, despite the pouring rain of ter of the National Safety Council to about 24 hours — which indicated act as liaison between private and act as liaison between private and governmental agencies.

"The essential problem," Heckman said, "is to get the same sort of thinking in traffic safety as has been engendered in industrial safety pro-

"In the area of traffic safety, this can only be accomplished by generating an overwhelming public opinion against traffic violations and the hazards which contribute to accidents." ards which contribute to accidents." The regular program features panel discussions on industrial and farm and home safety as well as traffic safety. Governor Smylie keynotes the

conference the morning of Sept. 13. Harvest Delayed By Rain

Harvesting operations in this area were brought to a standstill by the heavy rains of Saturday night and Sunday, and the drizzle of Monday.

It is estimated that 95 percent of the fall grain is already under roofs, but there still remains a considerable quantity of spring grain, not to men-

tion clovers, beans and some grasses. Several days of warm weather are said to be needed before field work can be resumed. However, this area always has two or three weeks of beautiful "Indian Summer" weather and there is no reason this year should be an exception.

Warehousemen are again issuing their warnig: "Be sure your grain or seed is dry and ready before you resume harvest operations."

Trucks Collide

A truck driven by John DeHaven and a pickup driven by Cletis Hoisington, Stony Point, collided at the street intersection between the W. H. Weyen and Gus Kruger homes in the east part of town Tuesday morning. No one was injured and the vehicles suffered only minor damage.

Has New Address

Mr. and Mrs. Bob Nelson have rerecent over-night guest of Janice Mr. and Mrs. Jack Mallory of St. Dennler.

Maries arrived Tuesday to visit in Marcia and Christy Choate, and Stan-Deble visited Wednesday afternoon Mrs. Robert Meserve and ley Clayton.

Those present were Mrs. John Deolevel a new address for their son bald and children, Johnny and Jan, Marcia and Christy Choate, and Stan-ley Clayton.

Economical Beef Cut Use

Economical cuts of beef make fine meals if the cooking is right. Mrs. Elizabeth Rettig, county home agent recommends that moist heat be used for portions that are commonly referred to as "less tender." The cuts are from muscles that get lots of use. They have more connective tissue than the higher-priced meat. Braising and stewing are the most popular methods of cooking.

In buying economy cuts the home

In buying economy cuts the home agent advises looking for meat with a large proportion of lean to fat and bone. Cherry color is good. Other signs are soft cartlidge tip and lean of fine texture.

Store the fresh beef, loosely covered, in the coldest part of the refrigerator. You should use it in four to five days, Frozen beef will keep a long time at zero.

A pound of round steak will make three or four servings. Blade roast or steak runs two to three per lb. Figure a pound of short ribs will make two servings. Ground beef or hamburger will make five.

Four Things Built Civilization

Look back along the endless corridors of time and you will see that four things have built civilization: The spirit of religion, the spirit of creative art, the spirit of research, and the spirit of business enterprise.

Mother Is Still Keeper of Keys To Medicine Chest

NEW YORK—The mother of the family—custodian of medicines and administratrix of treatments since pharmacy was superstition rather than science—is still the

key gal as keeper of the cures. In olden days the ladies manufactured their own home cures. Today, science supplies readypackaged potent pills and other paraphernalia, for colds or cold feet. But it's still the lady of the house that minds the medicine chest, just as in previous times when the treatments weren't as good—but just as interesting.

The cold itself was a veritable repository for odd treatments, probably because it even then affected so many that there was bound to be a plethora of favorite "remedies." Old "medicine books," for instance, list the following treatments for colds and sore throats: a piece of fat meat with pepper tied around the neck was supposed to work wonders; the grease from a Christmas goose was said to be invaluable; mustard and onion poultices were de rigeur in thousands of households; rock candy and whiskey were looked upon with extreme fond-

A leading superstition that drew a lot of adherents was if you ate from a blue dish, wore a blue ribbon, drank tonic from a blue bottle and downed a quart of stolen milk—your cold would vanish. Presumably into the blue.

Rare Minerals Laboratory-Made

LOS ANGELES—By subjecting minerals to combinations of temperatures and pressures considerably higher than those previously achieved in the laboratory, UCLA geophysicists have created minerals rarely found near the earth's surface.

Using a laboratory device called the "simple squeezer," conditions that formed minerals at extreme depths in the earth's crust have been duplicated. From common quartz they have

created coesite—a dense mineral which can exist only 40 miles or more deep in the earth. They have made jade from feldspar and aragonite from limestone.

The scientists have also been able to make various dense alum-

inous minerals from ordinary clay. From data on temperatures and pressures required to make these minerals, the depths at which similar minerals are formed in the earth's crust can be determined.

War Hero Safe Expert Just Peacetime Crook

EDINBURGH, Scotland—A safe cracker who turned commando to blast open' safes and lift secret enemy war plans in World War II is back in jail for practicing his craft in peacetime.

The skill which brought the praise of Allied intelligence chiefs ten years ago brought a 10-year sentence this time to John Ramsey, 50.

Ramsey parachuted behind enemy lines many times during the war and one of his most notable victims was Hermann Goering, whose Luftwaffe headquarters safe was cracked by Ramsey. His recent arrest came for cracking a safe in Glasgow and taking a puny \$45 in cash and \$4.50 in stamps.

The war hero pleaded for leniency, but the law was firm.
"From your conduct and his-

"From your conduct and history," said the judge, "you cannot be trusted to abstain from crime.

Shooting of Bystander TRENTON, N. J.—A policeman

who injured a bystander while shooting at a fleeing petty thief is liable for damages, the Appelate Division of the New Jersey Supreme Court has ruled.

The court ordered a new trial in a \$15,000 suit against a Newark patrolman, Martin Hellwig. Plaintiff was Miss Violet W. Davis, 21, who was struck in the hip by a bullet two years ago.

The decision said that Hellwig "committed an unjustifiable, illegal and wrongful act in discharging his gun at the fugitive petty thief."

The thief got away unhurt.

Family Reunion

DETROIT — William J. Maitland, 26. bid farewell to his brother, Lester, 22, after both had visited their sister. Both climbed into their cars and started home by separate routes.

Fifteen minutes later William's car collided with Lester's car at an intersection several miles from their sister's home.

William was admitted to a hospital with a fractured leg. Lester escaped with minor injuries.

Mummified Insects Preserved Over 60 Million Years

BERKELEY, Calif.—The oldest mummified insects yet discovered have been brought to Berkeley by two University of California scientists. Preserved in amber over 60 million years, the insects are expected to contribute to man's knowledge of insect evolution.

Entomologists Robert L. Usinger and Ray F. Smith found the specimens—six braconid wasps—during a summer trip to Alaska. The trip was sponsored by the Artic Institute of North America in co-operation with the Office of Naval Research.

Smith and Usinger found the perfectly preserved wasps in amber they collected along the Colville and Kuk rivers some 150 miles above the Arctic Circle. Alaskan amber dates from the Cretaceous Period, toward the end of the Mesozoic Era. This was the end of the age of dinosaurs and the time when flowering plants first became abundant on earth.

Studies of the six wasps and others that may be found in the amber should help unveil the beginnings of the first great evolution of modern insects accompanying the growth of flowering plants, according to E. Gorton Linsley, chairman of the U. C. department of entomology and parasitology.

Safer Cars Still Need Safe Drivers

MINNEAPOLIS—In spite of a long series of valuable safety improvements made in automobiles, such devices have had little effect on the 20 per cent of drivers who cause 80 per cent of the highway accidents.

This deadly segment of drivers, termed "accident prone" by safety experts, nearly always run twin records as repeaters—records of repeated safety law violations coupled with records of repeated accidents—until they die or are stopped from driving.

Statistics show that 78 per cent of all traffic accidents occur in clear weather, 70 per cent occur on dry road surfaces, 77 per cent on straight stretches of road. In 70 per cent of all fatal crashes, one or both drivers have violated

one or more safety laws. Of some 4,000 auto-train collisions per year, 40 per cent occur at crossings guarded by watchmen, closed gates, or special warning devices which blink red lights, sound gongs, or do both at once.

Thus only a small fraction of our traffic accidents "happen"; the rest are strictly man-made.

Shakespeare's Verona Still Proud of Juliet

WASHINGTON — One thousand American GI's recently arrived in Italy took time to brush up on their Shakespeare. They are stationed in Verona, of "Romeo and Juliet" fame.

Nestling in the foothills of the Alps, the beautiful city contains what is claimed to be Juliet's tomb. This and the "home" of Juliet are proudly preserved and exhibited by the citizens of Verona.

The city exhibits the Capulcti house as the place where Juliet languished and a guard authoritatively points out a pink marble balcony as the one from which she heard Romeo's wooing.

Although Romeo's home still stands in Verona, its bad state of repair may reflect the townfolk's low opinion of him. There are some who imply that he two-timed Juliet. Many Veronese name their daughters after Juliet, but Romeo is not a favored name for boys.

Stringy Bread Not Grounds for Suit

LONDON—Nothing so terrible about a little old piece of string in your bread.

No real cause here to take the baker into court, England's Lord Chief Justice Goddard ruled. Turner & Son, Ltd., appealed

from a Nottingham magistrate's decision that because a customer had found a bit of string in his loaf, the bread was "unfit for human consumption."

Lord Goddard quashed the conviction, commenting:

"A little piece of string does not

"A little piece of string does not hurt anybody. All they have to do is pull it out or spit it out."

Pete's Some Talker

NEW RICHMOND, Wis.—Pete Blankenheim, barber, likes plenty of conversation from his customers and likes to talk himself.

In Pete's shop is this sign: Haircuts, 50 cents; conversation, 75 cents; haircuts without conversation, \$1.75.

Blankenheim says its worth 50 cents extra "to keep me shut up."

Monte Carlo Often Has Its Share Of Money Problems

WASHINGTON — Monaco, second smallest nation in the world, where Monte Carlo traditionally symbolizes flowing wealth, has money troubles just like the rest of the global family.

Ordinarily, financial affairs tie easily together in the 370-acre state on the Ligurian Sea by the French Riviera. Monaco functions on tobacco taxes, postage stamp sales and fees from Monte Carlo's casino and its gambling concession. But a recent run on Monaco's biggest bank, The Monte Carol Banking and Precious Metals Society, despite hurried government assistance, caused the bank to close its doors. With it fell four cabinet ministers.

Monte Carlo's ornate salons of chance by law may not be patronized by citizens of Monaco. Numbering only 2,000 in a cosmopolitan population of 23,000, they may work in Monte Carlo's gambling rooms, hotels and resorts, but they are not permitted to gamble. In return, Monacans pay ne income tax.

Monaco is world renown as a vacation spot and visitors long remember the sight of pastel-hued villas in the sun-drenched foothills of the Maritime Alps. Sports lure many visitors.

Catching Grandma In Baby Department

LOS ANGELES—If the rate at which today's young women are having babies is maintained they may have families as large as their grandparents and great-grandparents.

So says Dr. Ruth Riemer, sociologist of the University of California, who has been making a study of birth rates.

Last year more than 4,000,000 American women had babies. Almost as many of them were having their second child as were having their first. This is the first time since accurate birth records have been kept that this situation has occurred. A surprisingly large number of women had their fifth child.

Not only are today's women having more babies than their jazz age and depression era parents, they are having them at an earlier age. According to latest statistics, one out of every two married women already has had a baby by the time she reaches her 21st birthday.

All-Purpose Policy Newest in Insurance

LOS ANGELES—Insurance coverage is undergoing great changes today and the time may not be far off when one all-purpose policy will protect you—financially at least—from all of life's perils.

least—from all of life's perils.

This is the prediction of Dr. Richard M. Heins, assistant professor of insurance on the Los Angeles campus of the University of California. He points out that insurance companies are increasing the number of risks covered by single policies.

Companies are now experimenting with policies which will protect the insured party for the whole spectrum of risks including all physical loss for dwellings and contents and personal property, comprehensive personal liability, and complete automobile coverage.

Addition of a life insurancepolicy to this all-purpose propertycasualty policy would complete the average person's protection.

Public demand for fewer individual policies with broader protection has spurred the growth of such multiple-risk policies.

Felled Deer Causes Hunting Accident

SMITH VALLEY, Nev.—Edward Stanley, 30, Weed Heights, was hunting near here and shot a buck. Just another hunting story up to this point, but Stan-ley's buck was different—it shot back.

Stanley walked up to the fallen animal, placed his loaded rifle on a rock, and started to cut the deer's throat.

The buck gave one final kick, hit the rifle, causing it to fire. Down went Stanley with a bullet in his knee.

Doctors at Veterans Hospital, Reno, reported the knee-cap broken but otherwise the chagrined Stanley was in good condition.

Needs More Exercise

DETROIT—A traffic court defendant blamed his speeding on his shoe. "I had on heavy work shoes and couldn't seem to lift my foot off the gas pedal," he

said.

Judge John D. Watts suggested that he take a muscle-building course, fined him \$25 and suspended his driver's license.

Helium Effect on Living Organism Reported at U.C.

Helium, argon and possibly other inert gases-gases which do not combine chemically with other elements-are far from inert in their effect on living organisms.

This is reported by Dr. S. F. Cook, professor of physiology in the University of California school for medicine.

Dr. Cook has completed experi-ments in which he studied the reactions of small animals living in an artificial atmosphere consisting of oxygen and helium or of oxygen

The artificial atmosphere contained the same amount of oxygen found in the normal earth's atmosphere-about 20 per cent. But nitrogen, which forms nearly all of the remaining 80 per cent of the earth's atmosphere, was removed and the inert gas substituted in this same proportion. The ordinary atmospheric pressure of sea level was maintained.

When helium was used in such an atmosphere, the physiological processes of mealworms, lizards and mice were markedly changed. Similar, but less marked, changes were observed when argon was used.

The principle effects of the two gases were retardation of growth in the animals and an increase in the metabolic rate—a stepping up of the pace of work done by the body in the living process.

The research indicates that it may be useful to substitute helium for nitrogen in air used by men working in some tunnels, underwater construction projects, and some other conditions of high pres-

Hard Pad Canine Disease Gives Dog Owners Scare

A serious distemper-like infection that leads to hardening of the foot pads and nose is being seen in American dogs, but there is no evidence that it is a new disease or that it is becoming more prevalent.

Alarming reports from England, where the so-called hard pad condition is reported to be widespread, have made many United States dog lovers overly fearful of the disease.

Thickening, hardening, and peeling of the foot pads and nose sometimes occur in advanced stages of distemper or distemper-like illness, but this condition always is seen in company with other symptomsnever alone.

Among theories as to the cause

(1) The canine distemper virus may undergo a change, under certain conditions, that causes it to produce symptoms that differ from those seen in typical distemper cases. "Hard pad" may be one of

the symptoms so produced.
(2) In some cases, the pure distemper virus-which causes fever, respiratory distress, and diarrheamay be accompanied by a second virus that brings on the changes in foot pads and nose.

(3) The severe illness caused by distemper or complicated distemper can lead to a temporary nutritional deficiency and loss of body fliuds that may account for the thickening and hardening.

Immunization w i t h biological products is the best means of preventing distemper and the hard pad condtion.

New Course in Science

A revolutionary approach to the teaching of science which combines all the sciences in a single course emphazing their relationship to man was described to the 118th national meeting of the American chemical society held in Chicago, by Dr.
John Xan, head of the department of chemistry of Howard college, in Birmingham, Ala. Taught without a text, the course is designed to give students a broad acquaintance with the modern scientific world and an effort is made to stimulate their interest in scientific discoveries and periodicals by basing examinations mainly on knowledge acquired outside the classroom, Dr. Xan reported. Ninety to 95 per cent of students finishing the combined general science course have voted for it in preference to the conventional type of science course.

"Candling" Eggs

Candling is used on practically all eggs before they reach the stores. An electric light is placed inside a box with a hole about the size of an egg, in which the egg is placed. In a darkened room, with some practice, it is possible to detect cracks, blood spots, developing germ and the size of the air cell. The latter is the most important criterion of freshness because it gets larger as moisture escapes and is replaced by air. By comparing a few eggs known to be fresh with others that are older, one may learn how to judge the size of the air cell and the age.

Changing "Hand-Me-Downs"

Giving "hand-me-aowns" a new and different color via the dye-bath is one sure way of getting little sister or brother to wear them without resentment. Adding a hem, collar or beit will still further accentuate the "new look." Wash and thoroughly rinse all articles before dyeing, and also remove buttons, buckles and trimmings. Use color removes first, the bureau counsels. when the article is unevenly faded or spotted and when changing to a different color.

Man-Made Light Moves Ahead By New Inventions

There is nothing to show that our anthropoid ancestors used candles to find their way around among the trees after dark, but there is ample evidence that the hairy cave man used fire to scare away prowling

Man-made illumination has come a long way since those remote days. By far the greatest strides have come in the past 75 years-greater progress than through all the thousands of years before. From the cave man's torch to electric light, the flame was the only source of illumination.

Within recent weeks, a new source of artificial light has been announced wherein electricity appears to serve merely as a match to light a wick. Powdered phosphor on a sheet of glass emits a mellow glow of its own under electric impulse. Your house of tomorrow may have these panels installed in walls and ceilings. It is claimed the cost of maintenance will be so low that the only need for switches will be to turn lights off when you want darkness. Clockfaces, stair risers and other incidentals will be permanently connected.

With this revolutionary development in man-made light comes wonder as to how it all started. Archaeologists have concluded among the earliest to whom the cave man passed his flaming torch were the ancient dwellers of Mesopotamia where lamps, fashioned from terra cotta, were found to have been used during 7000-8000 B.C. Copper and bronze lamps were used by the Persians and Egyptians in 2700 B.C. Homer described a "Festival of Lamps" in 950 B.C. The Romans were using lanterns a century before Christ.

The candlesticks of Biblical times and the lamps of the vestal virgins used animal and vegetable oils. Pliny mentioned the use of a mineral oil for lamps in 50 A.D. The Phoenicians appear to have been the first to use wax for candles in

Atom Disaster Would Demand Many Trained 'Mass Feeders'

"In case of enemy attack or atom bombing, the disaster would demand more trained persons for mass feeding than we can hope to have today," two Red Cross workers who conducted an emergency feeding program during the flood disaster in Kansas City last July, warn in an issue of the Journal of Home Economics.

"Disaster feeding at best is a hodgepodge affair because there are never enough experienced people and survivors to do an ideal job." Jane Griswold, assistant nationa director of the American Red Cross Food and Nutrition Service, and Kathleen Kienstra, director of the Midwestern Area division of that service, explain in an article pointing out that experience in the flood disaster indicates what the situation would be in event of enemy attack. While urging the home economists to be ready with their professional help, the authors pay great tribute to the work of the community organizations who carried out the feeding program during the Kansas flood

"It is encouraging to see the common purpose that draws people together when disaster comes to a community. The simple, basic, practical things that people can do for each other helps to ease the impact of catastrophe and turn the mind from despair," the authors conclude in the article, "Red Cross Fights Flood Disaster."

Treating Addicts

Law enforcement, education of the public and treatment of the individual are the three most important factors in combating the alarmingly increasing dope addiction among teen-agers, according to an article in Today's Health, published by the American Medical Association. "Regardless of where the upsurge of addiction started, it has jumped racial, economic and social boundaries," the author of the article, Dr. Victor H. Vogel, medical officer in charge of the U.S. Public Health Service Hospital at Lexington, Ky. The hospital is one of the two federally operated for the treatment of drug addicts. Dr. Vogel reported that admissions at the two federal hospitals for drug addicts rose from 2,700 in 1949 to 4,500 in 1950, with an estimated rate of 4,200 in 1951. "An alarming part of this increase was due to the admission of addicts under 21, which jumped from 22 in 1947 to 440 in 1950an increase of 2,000 per cent," Dr. Vogel stressed.

Early Inventors

Among the early American inventors who founded great industries, few struggled against adversity more desperately than Gail Borden (1801-1875), who was the first to obtain a patent (August 19, 1856) on a process for condensing milk. His first invention was a meat biscuit for which he was granted a prize at the International Exposition of London in 1851. Returning from London he was anguished by the death of infants on the ship who had been fed milk from sick cows. As a result of this experience, he spent years of experimentation to invent a process that would preserve milk under whilesome conditions.

Dear Friends: As the time has come to renew my subscription to the Gazette shall include a few lines that might interest the readers of your paper. You have told repeatedly of much rain your way, perhaps sometimes too much, and then again with great blessings. Here it was just the opposite. First we had a very cold and late spring, which was followed by a drought similar to that of 1936, when everything in grain, as well as corn and other vegetation, wilted. The 1956 oats crop was nil as a whole, and the corn, too, is of little value. There are stalks, but no ears. There have been some showers of late, but too late to do any good.

This drought area is about 100 miles square, and consists of part of Iowa, South Dakota and Nebraska, and has been proclaimed a disaster area. The rainmakers from Idaho and California were invited to produce

the needed moisture, but proved a A sharp knife and timely cut are flop. The farmers welcomed the Soil rangement. Flowers keep best when \$43.00 per acre support and still per-

selective logging

Our pledge as an American Business

- ★ . . . to use wisely the natural ★ resources of our nation, remem-
- bering at all times to use, conserve, develop and defend from
- * waste our country's minerals, * soil, forests, waters and wildlife.

In some areas, Potlatch foresters will mark only the trees to be logged, while in other areas they will mark only the trees to be left as seed trees to provide for regeneration of the new forests. In selective logging, the harvest of trees is balanced to insure continued growth, watersheds and wildlife habitats. In marking the trees for either lumber or pulp purposes, today's forester not only assures us continued growth and production, but assists in the wise use of our natural resources . . . another reason why we say—Forest Management is Research in Action.

Squirrel Provides Big Part

Although it is generally recognized as a prolific game species of people realize the truly important part the squirrel plays in the na-

Several years ago the Remington Arms Company, Inc., conducted a survey of national wildlife resources and sportsmen's hunting preferences. The survey revealed that ed with Mrs. George Finke, Thursday the squirrel ranked second only to the rabbit as the most sought-after game species in the country.

A recent analysis of "Hunters" Scorecards" returned to the office of the Mississippi Game and Fish commission placed the squirrel in an outstanding position in the huntner at the Don Christensen home; ing activities of the sportsmen of visited George Finke at the Orofino the Magnolia state. The analysis hospital, and then all went up the North Fork and ate supper with Mr. cent or 150,000 of the licensed huntand Mrs. Eugene Betts, and called ers in Mississippi sought squirrel during the 1950-51 hunting season. The cotton-tail rabbit and the Bob White quail practically tied for second high rank, with the rabbit nosing out the quail by the slight margin of 47.15% to 47.12%. Next in line was the lowly 'possum with the somewhat surprising score of Mr. and Mrs. Walter Dorendorf of 23.06%, topping the dove's rating of

A breakdown of the analysis in hunting activity percentage and estimated total statewide kill follows: deer 6%, 1,370; wild turkeys 1.35%, 249; quail 47.12%, 2,119,532; squirrel 79.83%, 2,418,574; rabbit 47.15%, 900,360; coon 16.2%, 208,712; 'possum 23.06%, 386,145; dove some remodeling on their home.

Patients On Salt-Free Diet

Patients on a monotonous saltfree diet were given the hope of adding more variety to their meals Finke to Orofino to see George on in two reports on further experiresin compounds have been adgestive heart failure, cirrhosis of the liver, or kidney ailments which cause excessive fluids to collect in the system. The resin compounds eliminate the sodium which locks ir the fluids. Because of this action, it becomes possible for the patient to take more sodium in his diet than would otherwise be possible.

In a report on resin therapy presented by Drs. Carl Voyles, Jr.. and Edward S. Orgain, Duke University School of Medicine, Dur-ham, N. C., it was concluded that, "Resin therapy is a useful adjunct to conventional therapy in the heart failure, and it can be used safely in conjunction with strict are followed closely. Resin therapy also makes possible the addition of sodium chloride in amounts sufficent to render the diet more palatable," the report added, and it facilitates the action of mercurial compounds that help in fluid elimina-

The second report on exchange resin therapy reviewed studies by Drs. B. L. Martz, K. G. Kohlstaedt, and O. M. Helmer, at the Lilly Clinic for Cardiovascular Research Indianapolis.

Sleep Anywhere

One of the most energetic causes of sleep is fatigue. It is said that prisoners upon the rack have slept through sheer exhaustion while undergoing the horrors of torture In a like manner, if one is tired enough he will be able to sleep on the floor or on any manner of uncomfortable bed, although he and grounds; good location. See will not thoroughly relax. To the person who has known the luxury of sleeping on a good quality bed, though, sleeping on a worn out, most as much torture as going to sleep on a prisoner's rack.

War and Peace

Development of the flame thrower, which first became a military 8-tf weapon during World War II and has been used extensively by the Army in Korea, led to the peacetime perfection of a highly proficient weed killer. Tests at the Army sure. Good grain & pea land. KEN-NEDY REALTY CO., BOX 80, Chemical Corps Center, at Edgewood, Maryland, proved that a thin jet of burning, jellied gasoline would kill weeds between rows of plants without harming the plants themselves.

THE

Published Weekly by the Union Oil Service at Kendrick W. L. "Bill" Rogers, Editor

HELLO, FOLKS:

Well, that was a very nice rain we had — even if it did last considerably longer and give us lots more moisture than we would have prefered. And all this reminds us that the harvest season is drawing to a close and we'd better hurry to get in the ramining crops. Now when you're in a hurry, you need good lubricants for your machinery. So think of Union Greases, Oils and Fuels. Pick up your phone and call 1251. We deliver.

A truck driver just back from a trip to New York ducked into a booth and called his girl friend. In a few minutes he came out looking very bewildered. "She's gonna get married," he said to his friend.

"Aw, forget it," advised the

she's gonna marry me!"

We want to service your car. Let us grease it, change the oil and fill the crankcase with that wonderful Royal Triton Motor Oil, wash and grease it — yes, and we'll wax it too. Drive a clean, good looking, squeak-free car!

A fat man bumped into a lean

"From the looks of you," said the fat one belligerently, "there must have been a famine." "And from the looks of you," retorted the lean one with a grin, "you're the guy who caused it!"

Better begin to think about the tires on your car, pickup or truck -the one you're going to use for friend. "There are lots of girls." hunting — then come around and "Yes," replied the driver, "but see us. We sell those famous U. S.
