WWP TAX BILL INCREASE \$50,000

An increase of more than \$55,000 in Idaho property tax payments over 1955 was noted this week by the Wash ington Water Power Company which delivered checks to the tax collectors of nine Idaho counties for the first half installment on a \$1,122,215.77 tax bill for 1956 on company properties in Idaho . . . Bonner county from a tax standpoint has a rather unique situation with power properties inside its boundaries. There are two power plants on the Clark Fork River, on opposite sides of the county.

Albeny Falls dam, a federal project, is tax exempt. Washington Water Power's Cabinet Gorge plant, just inside the county's eastern limits, this year has a tax levy of more than \$450,000.

This is almost twice the total amount of taxes levied by Bonner County on all taxable properties in 1950 . . . It is fairly evident that were it not for the free enterprise own. ership of Cabinet Gorge plant, each individual resident's tax load would now be substantially higher.

-Reprinted from The Kootenai County Leader.

Note: Public power propaganda experts say it is the public who actually pay these taxes. Yet it must be said. in defense, that they are deducted from a business-managed utility's revenues. The question is this: Why can't public power plants, with their high rates — also paid by the public — pay their share of taxes?

Sharran Scheline, a 4-H girl of Interesting Farm Facts Up to the end of October, 1,069 Donnelly, is the 1956 winner of the Idaho farmers had signed up 92,000 Idaho junior divisien of the make-itacres for the 1957 soil bank wheat Yourself-with-wool contest. She is the acreage reserve.

Food experts say that an ovenready turkey weighing less than 12 extension enineer, is completing plans for a semi-automatic cattle spraying of about one pound each. A larger turkey will provide adequate servings of about three-quarters of a pound leach.

Quonset-Type Huts **Meet Storage Needs**

'Little Business' Answers Challenge in Grain Belt

Called upon by the department of agriculture to perform a modern miracle, "little business" in 10 midwestern states is tackling one of the biggest jobs of its kind ever undertaken anywhere in peacetime.

Its Herculean assignment is the site preparation and erection of 2,-300 steel buildings—each 32x96 feet or larger—at 670 widely separated

The task arose with the grain belt's acute need for space in which to store the record-breaking carryover of 1948's corn crop. In line with

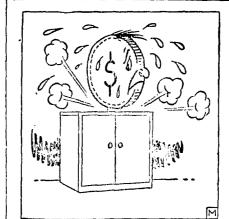

Grain being loaded into Quonset huts for CCC storage near Paulding, Ohio.

the trend toward economical "hortzontal" grain storage, the depart-ment ordered Quonset buildings for a large part of the necessary new facilities. These archroofed steel units now are mushrooming up beside highways and railroads near farm centers through the efforts of local businesses and labor, rather than the work of transient crews employed by a few big and distant contracting firms.

Within two weeks time more than 1,100 concrete foundations had been laid, and erection of steel was under way on them in every state. The concrete work alone was roughly equivalent to laying 25 miles of highway in a time that an average road-making crew would require to put down one.

Sweat Down Costs

Sweat down your production costs if you want to maintain profits in these days of declining farm prices. One way to sweat down those costs is to increase your crop yields per acre. More bushels of corn and grain per acre, more pounds of meat, milk, dairy products and poultry mean lower production costs per unit. On such a basis you can make a profit even if prices slacken further.

You can get those higher yields and lower costs with good soil management. Good soil management means giving your soil a fair deal. It means supplying the soil a wellbalanced ration of plant foods, so crops will be well nourished. It means building up instead of breaking down soil structure and tilth. It means "recharging" the land with soil-enriching crops at regular intervals, instead of growing soil-draining row crops year after year on the same land.

Dangers of Butchering At Home are Outlined

Home butchering is profitable on the farm and many rural families are replenishing their lockers, jars and pantries.

But, unless undue caution is used, home butchering can be dangerous. Equipment, too, should be used with care. All knives should be kept in a suitable place when not in use. Hoisting equipment should be checked. A tamper should be used to force meat into the grinder.

Attention to Details Pays Off for Hog Farms

Attention to details is the biggest reason why some hog farms earned \$2,000 more than some others during the past year.

F. J. Reiss, farm management specialist in the Illinois college of agriculture, said that 128 high income hog farms averaged \$10,200 earnings from swine last year, while 161 less-efficient farms took in only \$8,000. Extra care at farrowing, control of parasites, helped to be confused.

Modern Dentistry Can Aid Youth with Cleft Palate

The role of modern dentistry in the total rehabilitation of young men and women with cleft lip or cleft palate so they can lead happy useful lives is revealed in the Journal of the American dental associa-

Asserting that more children are born with this condition than any other congenital deformity, Dr. Herbert K. Cooper, director of the Lancaster, Pa., cleft plate clinic estimated that at least one out of every 700 children have this handi-

"The most frequently found condition has been getting the least amount of attention," he said. "The citizens of this country should beas well informed on the subject of cleft palate as they are on policmyelities, cerebral palsy and rheumatic fever."

Citing cases of patients treateds at the clinic, Dr. Cooper told of a youth, 17, born with a cleft lip and cleft palate. During infancy, surgery had been performed, leaving him with a flat upper lip and very poor speech.

"He shunned all social contacts," Dr. Cooper said. "He left high school and was driving a truck. His whole family was extremely upset."

Dr. Cooper said the youth was given a medical, dental, speech and psychological examination. And appliance was constructed to build out the upper lip and cheeks and thimble crowns were placed on his five remaining upper teeth. At the same time, he was given speech instruction.

The boy was persuaded to finish high school, Dr. Cooper said, and he then was admitted to college. He added:

"The first two years were quite difficult for him because of his social adjustment problem, which he gradually overcame. Then he was taken into a fraternity and was graduated on the dean's list. He is now attending law school in a large university.'

U.S. Still Leads World In Production of Matches

It's pretty difficult to get something for nothing these days, but there's one item left that is used by the average person 14 times a day, and two out of five times he doesn't have to pay. That little item is the

The manufacture of matches is a \$25 millon-a-year industry in the United States. Eac'

than 500 billion mat. duced, and of 200

matches made in the United States: every year, about 196 billion ares given away with the sale of cigars, cigarettes, and tobacco.

Sweden had us topped for many years in the production of matches. The Swedish Match Company, formed in 1913 by Ivar Kruegar, had match factories in 43 countries of the world and manufactured most of the world's matches. Kruegar is said to have invented the common superstition that "three on a match" is unlucky, in order to sell more matches. His match empire lasted until 1932, when it; was discovered he'd been using the company's capital for his own speculations.

Sweden now ranks fourth down the line led by the United States. Great Britain ranks second and the Soviet Union third.

Spices in History There are many references to spices and herbs in the pages of history. They play important parts in the development of our civilization. The ancients attributed strange powers and accomplishments to spices. Basil, for example, is venerated by the Hindus who plant it outside their temples and homes to insure happiness. The famed laurel wreaths which crowned Greek heroes of war and sport are the same bay leaves we use today in

our cooking.

explosions.

Freezing is most likely to occur in pipes which run along an outside wall. This hazard should be corercted by re-location of the pipes, it possible. If this is impractical, thorough insulation with from two and one-half to three inches of good: pipe covering is the only safeguard. Should any of the piping freeze, the work of thawing it should not be entrusted to a handyman. It should be done under the supervision of an experienced master plumber. Blow torches or other methods involving open flames are extremely dangerous. They not only involve fire haz-

ards but also permit the generation

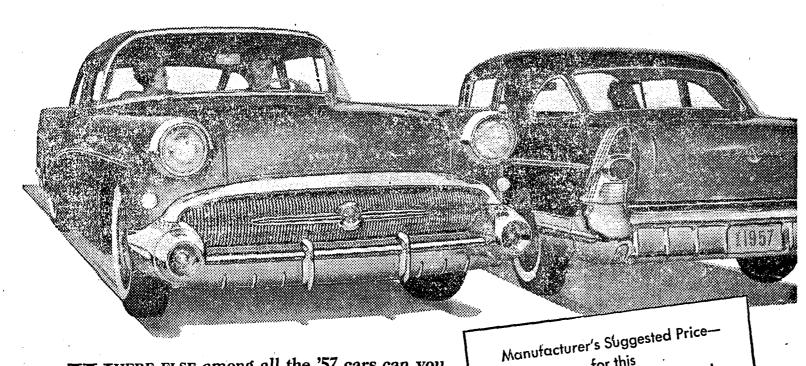

of high pressures which may cause

Freezing of Water Pipes

Gregorian Calendar

The form of our present calendar was set by Julius Caesar with some additional innovations by Augustus Caesar. However, in about 1500 years the length of year adopted by the Caesars proved incorrect. Therefore, Pope Gregory, in 1582, appointed a commission which revised the calendar sufficiently to bring it back in step with the seasons. Now it takes 3000 years for the calendar to slip out of line one day. The Protestant countries did not accept the Gregorian calendar until 1732 and this is why certain dates in history sometimes appear

What a Price! What a Buick!

Where else among all the '57 cars can you find the equal of this?

Where else can you get the power, the performance, the room, the visibility, the solid substance you get in this spanking-new Buick Special-for just a few dollars more than the price of a smaller car?

Here you get a big and brawny Buick that's brand-new in body and styling and interior beauty.

More important-brand-new in everything that gives lift and life and lilt to a car-for that's where we put most of our hard-cash millions in building you this sensation.

So you boss a brand-new top-torque engine, command a brand-new instant Dynaflow.*

You ride in a new chassis design that "nests" the body inches lower without loss of headroom, legroom, footroom - or ground clearance.

Go see for yourself at your Buick dealer's -Buick's the dream car to drive - and the most satisfying buy in the land today.

Terramycin Said Effective Against Pinworm Infection

Infection caused by the pinworm, the most common and widely distributed of all human parasites, can now be successfully treated with terramycin, according to a team of 6 American doctors conducting clinical trials in Haiti.

Treating 61 cases of pinworm infection, the physicians found terramycin effective in all but two patients. Clinical trials with the widerange antibiotic drug were undertaken because, said the doctors, "the usual treatment with gentian violet often does not eradicate the infection, and not infrequently the drug must be discontinued due to toxic reactions." Several of the patients who had taken gentian violet previously said they found terramycin "considerably more toler-

Pinworm infection is found throughout the world and in all ages. Public health experts estimate it affects 35 per cent or more of the general population. In southern states 50 to 60 per cent of all children have had it. Caused by a small white worm, its most disturbing symptom is itching. Often scratching brings about a secondary infection. Pinworm may interfere with eating and result in loss of weight and anemia. The disease usually infects the entire fam-

In their clinical report, appearing in the current issue of the medical journal, "Antibiotics and Chemotherapy," the doctors point out that successful therapy depends upon simultaneous treatment of the whole family. In this respect one of gentian violet's disadvantages, they say, is that young children often cannot swallow the enteric-coated tablets.

Whenever possible, the medical team in Haiti examined whole families and treated them simultaneously with terramycin. Full cooperation was not always obtainable, but "despite inadequate dosage in a large number of cases," says the report, "in only 2 instances did treatment definitely fail by the fourth week after therapy was be-

North Carolina Attacks Highway Safety Problems

A sound program to promote safety on the highways has been set in motion by the state of North Carolina. The appalling number of deaths and injuries resulting from motoring accidents in recent years has provoked this state to take action of a new and decisive ancient sea bottoms during the

Since the first of July, applicants for driver's licenses and renewals have been required to have their eyesight tested on a complex instrument which measures 12 visual skills, including muscular balance, acuity at near and far distances, and depth perception. The instrument makes it impossible for drivers with poor vision to slip by, by memorizing the letters that they must read — a trick sometimes played with conventional charts. Those who fail the tests are advised to consult an eyesight specialist, and many of them will undoubtedly be enabled to pass by professional eye-care.

Good vision has long been recognized as a major factor in accident prevention, and thousands of hours have been spent in attempts to establish proper standards for motorists. But the results were always inconclusive, because too much of the element of personal opinion was involved. Under the new system, however, definite statistics on 1,300,-000 drivers will be obtained by next July 1, and it will be possible to judge accurately which visual errors contribute most to accidents and which visual skills are most essential to highway safety.

A Comet's Weight

What is the weight of a comet? Weight is a measurement of the attraction of the Earth for a body on or near its surface, and as a comet moves far out in space, and is subjected to a varying attraction from the Earth and other planets, one should not speak of its "weight." Its mass, which is a measure of the amount of matter it contains, can only be determined roughly. It has been estimated that with Halley's comet the nucleus. which contains most of the material, has a mass of about a twohundred-millionth of the Earth's mass. This would be about thirty million million tons. It has also been determined that the particles of which Halley's comet is made could not be held together by the gravitational attraction of a mass smaller than one twenty-fifth of the above figure. Most comets, however, are much smaller than Halley's, and have considerably smaller mass.

Schedule Is Wise

A regular painting schedule actually simplifies property protection. One wise farmer does a fourth of his buildings each year. In that way, each gets its necessary coat of protection every four years at the center of the universe, and without fail, and each year's paint- the Sun, Moon, planets and stars all ing project can be fitted in as other | revolved around it in varying pe outdoor work permits. While city dwellers do not have as many structures to safeguard, they are in 1543, which places the Sun at the wise to look on painting as property-value insurance and to follow the Earth as one of a number of a regular schedule.

Thank Practical Eskimos For 'Deep-Freeze' Invention

Thanks to practical Eskimos and a shrewd Yankee fur trader, we fruits and vegetables "fresh" at any time of the year. The quickfreeze pack keeps them fresh.

The Yankee fur trader is Clarence Birdseye of Glouchester, Mass., who still indulges his fancy for adventure in the Far North. While dealing with Arctic Eskimos up the Labrador coast during 1912, he was amazed at the excellent meat and fish they seemed always to have available. The secret was in the quick-freezing of game fresh-ly caught. "Quick-Freeze!" That was the Big Idea he mulled over as he sailed home. Invent a special kind of freezing machine to freeze almost instantly, patent it, make fresh foods available to everyone!

Inspired by this thought, and stimulated by this hope of protection afforded by our patent system, he built his first crude machine which he called the "Multiplate Quick Freeze." This consisted of a new garbage can of corrugated iron with layers of steel plates between which codfish and rabbit meat were placed. It was supplied with coils that contained salt brine as a refrigerant. Incredible, but true, this unpolished mechanism was the forerunner of our gigantic lockers of today. Encouraged by the success of his invention in food preservation, and the patent protection obtained thereon, Birdseye endeavored to promote his idea.

A skeptical America was not too eager to accept quick-frozen foods, and our inventor, in 1924, after making stabs in both Gloucester and New York, went broke. Unbeaten, his perseverance and ingenuity urged him to try again and, in 1927, after securing a \$2,250 loan on his life-insurance policy, and obtaining \$375,000 from backers, he again launched into the business. This time it took a year to interest the public sufficiently.

Gretaceous Geological Period Shale Collected In Fresno

More than a ton of shale and marl containing 100-million-yearold fossils, collected in Fresno County, Calif., last summer by Dr. Alfred R. Loeblich, Jr., Smithsonian Institution paleontologist, is being processed at the U.S. National

The Fresno County locality ha one of the thickest known deposits -in some places as much as 25,00 feet-of sediments laid down in the Cretaceous geological period, the heyday of the great dinosaurs of land and of the weird swimmin reptiles, the plesiosaurs in the sea The material collected by Dr. Loeb lich, however, contains fossils fa less conspicuous than these mon sters, but in some ways they ren resent even stranger forms of life They are minute Foraminifera, or shelled protozoans. Although constituting a very large branch of the Animal Kingdom, the Protozoa are one-celled animals and nearly all are microscopic; the best-known of the living forms are internal parasites which cause some of the most deadly diseases.

Foraminifera are a specialized group of Protozoa that build an external shell, and these shells may be preserved as fossils During the Cretaceous period, represented by the material collected this summer, many of the more modern shell forms were first developed. These fossil shells are often used by the oil industry to determine the age of geologic strata and thus are of economic importance, as well as being of value to the scientist in showing evolutionary trends.

Although single-celled, such sea creatures may have many chambered shells. As they grow they form new chambers all connected by openings through which the protoplasm of the cell flows. But, however many chambers of this sort are produced, the protoplasm is continuous through all and the animal still remains a single cell.

Looking Back

Haile Selassie's 1,150-man, handpicked battalion in Korea is a far cry from the desperate army he raised in 1935. Then, as Mussolini's men marched into his land, he issued this draft notice: (1) When this order is received, all men and boys able to carry a spear will go to Addis Ababa. (2) Every married man will bring his wife to cook and wash for him. (3) Every unmarried man will bring any unmarried woman he can find to cook and wash for him. (4) Women with babies, the blind and those too aged and infirm to carry a spear, are

Ptolemaic System

The Ptolemaic System was the ancient concept of the universe, proposed by the Greek astronomer Hipparchus, who lived about 130 B. C., It is named after Claudius Ptolemy, a later astronomer, who popularized it in a famous book known as the Almagest. According to this system, the Earth was fixed riods. It has been superseded by the system proposed by Copernicus center of the Solar System, and has planets revolving around the Sun

Memorial Scholarship Set Up

U. of I., Moscow - A memorial scholarship, established by the members of Gault dormitory in honor of three University of Idaho students who lost their lives in an arson-set are now able to have seasonable fire, received formal approval of the Board of Regents, President D. R. Theophilus announced this week.

The scholarship will be awarded to persons coming from the general home areas of the three students, William Clair Schuldberg, Idaho Falls; Paul Frederick Johnson, Terreton, and John Robert Knudsen of Davenport, Wash.

An incoming freshman each year will receive the award, which will cover the annual cost of a room at Gault dormitory. For the 1957-58 school year, there will be several room scholarships available. The extra awards, for one year only, are made possible by funds provided by the student body of the Idaho Falls senior high school, and the Associated Students of the University of

"COMING EVENTS CAST THEIR SHADOWS BEFORE"

- (Author's Name Below) -

Right now things are happening that will mean much to your future better health. Millions of dollars are being spent by the pharmaceutical industry to reresearch new drugs that promise to cure, or relieve diseases that have plagued mankind for ages.

Part of the cost of the medicines in your prescriptions is paying for this research. Because of this, it is certain, that in the future, many lives will be saved.

YOUR PHYSICIAN CAN PHONE 941

WHEN YOU NEED A MEDICINE

Pick up your prescription if shopping near us, or let us de-liver promptly without extra charge. A great many people entrust us with the responsibility of filling their prescriptions. May we compound yours?

Quotation by Thomas Campbell

Come in and take our "TRACTION TEST!"

INTERNATIONAL-built all-wheel drive is available in ten models ranging from 7,000 lbs. GVW to 33,000 lbs. GVW

If you've wondered just how much extra pull those front driving wheels on a four-wheel-drive truck really give you-then here's a good chance to find out!

Simply phone or come in and we'll arrange for you to take our four-wheel-drive "traction test."

Take an International four-wheel-drive to the grades you know are tough-take it to places you've never been able to get through with your rear-wheel-drive truck. As the International pulls through with flying colors, remember this: Internationals can't be beat for operating economy, either.

Come in and take our "traction test" anytime!

Over the years INTERNATIONAL TRUCKS

cost least to own! (and owners' cost records prove it)

Gentle, clean, sweet-fresh

ELECTRIC DRYING

treats dainty things so delicately

Whether it's baby's best or delicate lingerie or frilly frocks or modern fabrics, you just set your automatic dryer and pieces are perfectly and safely dried in minutes. For cottons and linens there is another setting that dries these clothes soft and wrinkle-free. For hard to dry fabrics again your dryer knows just the amount of gentle tumbling and clean, warm air needed to dry just right. No worry or need to guess about "drying times" with these new miracle electric dryers.

Better yet! your laundry isn't merely dried, but actually "dry conditioned." Clothing lasts longer, ironing takes half the time. So many pieces will need no ironing at all. Damp-dried pieces can be ironed without sprinkling. More time saved here.

Modern, isn't it? Why worry about the weather this winter? Visit your home town Inland Empire Electrical League member-dealer stores soon and see the beautiful, new, automatic electric dryers now on display.

IDAHO'S HEALTH

Every two and one half seconds, or twelve million times a year, someone in America needs prompt, effective aid for a cut, a burn, or some other mishap. Very often the right kind of aid makes all the difference between minor or major illness or School students are cordially invited. injury, or even the difference between life and death.

If you are to give the right kind of first aid, it means you have to put in time and effort now, before accident or illness strikes. It is too late to learn, dangerous to guess, after emergencies occur.

We would advise everyone to study and practice first aid. You could take courses that are offered periodically in most communities, and you can read up on first aid in a number of books and booklets. Many good first clear physicist with the death-ray aid booklets are supplied free of idea, and his associate, Dr. Wolfcharge by insurance companies and volunteer health organizations.

For the moment, however, you and your family will be able to meet most health emergencies with con-No services or Sunday School. All fidence if you know how to follow are urged to attend the dedication through on the following 10 aids to give first:

1. Act promptly but not hastily Examine the injured person carefully and quickly from head to toe. Look for breathing obstructions, bleeding and broken bones.

2. Start artificial respiration if breathing has stopped.

3. Stop the bleeding. A sung bandage or a pressure dressing usually will check bleeding. If not, press firmly at the point which cuts off blood flow to the injured area of the body. Use a tourniquet only when all other methods fail.

4. Look for shock - face drained friends and neighbors for their acts of color, skin cold and moist, a rapid, of thoughtfulness while Mr. Clemen-hagen was in the hospital. The flow-tim in blankets or clothing, make him lie down unless doing so will make much. - Mr. and Mrs. Bob Clemen- other injuries worse, and try to calm 6-1x him. If a person can swallow, has no abdominal injury and is not vomiting, have him drink as much "shock solution" as possible. This is made who sent cards and notes to us on by stirring one teaspoonful of table salt and one-half teaspoonful of bak-

5. Give first aid at once in poisonings. Get medical help, but don't wait to start first aid — minutes count, The family of Mrs. Pearl Scott If the poison container is at hand, deeply appreciate and will always re- follow instructions on label. Othermember the kindness and sympathy wise give victim egg white beaten in of friends and neighbors in our recent water, or plain water, to dilute the

6. Send for help. First aid "holds the line" until the physician can take

7. Handle with care. Don't move an injured person more than is absolutely necessary, and then do it very carefully. Usually it's best to wait for doctor and ambulance.

8. Splint broken bones. The timehonored rule is to "splint 'em where they lie." Splints should be long the deaths and disabilities. If all enough to reach well beyond the joints above and below the suspect-9. Take care of burns. Apply a

sterile dry gauze dressing and cover with bandages. Let the physician do the rest. Cut clothing away from burn if possible, but don't try to pull most common causes of poisoning off clothing which may be stuck to in childhood. During the first 18 the burned area. In the case of chem- years of the Duke Hospital, more ical burns, rinse immediately with

10. Bandage wounds to help protect against infection, reduce bleeding, lessen pain. Bandages do a lot for the patient's morale. The wound should be covered with a sterile dressing, of course, before the bandage is applied. - Dr. L. J. Peterson, Idaho Director of Public Health.

Operating Under Difficulties A few logging trucks have been operating here the past couple of weeks, despite the cold and snow. The percentage, in comparison to summer

hauling, is very small, however.

During the bitter cold weather a great deal of difficulty was experienced in starting equipment, and now that the weather has warmed up, snow is the main obstacle. It is said to vary from about 14 inches here in compiled by the Bureau of Agrithe valley to 36 inches in the surcultural Economics of the U.S. rounding area.

Most of the trucks now hauling are

of the dual-axel dual-drive variety, and most are wearing chains. Occassionally, however, a truck comes through without chains.

Farm Hints

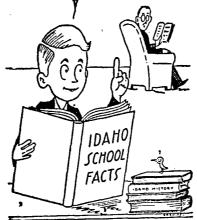

Tony Horn, horticulturist of the University of Idaho extension service, says it is advisable to locate a farm house on a rise of ground, so as to provide good natural drainage. W. W. Rhodenbaugh of Middleton,

winners of the first awards, presented than 100 per cent. in 1956, in the Idaho dairymen's hall of fame for breeders of purebred Robert Higgins, University of Ida-

ho extension agronomist, says dodder is one of the most serious weed pests of the clover seed business. Chemicals and burning are means of con-Dusting or spraying with DDT will

protect cattle from infestations of lice. Be sure, however, to use the correct formula.

DAD, DID YOU KNOW . . . ?

It would take over \$2 million per year to bring Idaho's teachers' sal-aries up to the average of those in FOR RENT — 3-room furnished apt. | Colorado; \$4½ million to match those 2-tf in Oregon and New Mexico.

In Idaho the percent of income to FOR SALE — Chopped Hay, mixed individuals spent on education has clover and alfalfa. Lester Weaver, decreased 18 percent in the last ten

American Inventions Make For Better Living Standard

During the period prior to World War II, when Adolph Hitler was building up an arsenal of weapons with which he hoped to conquer the world, a nuclear physicist at the University of Berlin had an idea for a death-ray gun.

The only thing wrong with the idea was that the inventor intended to use the death rays to kill microorganisms that spoil food. Hitler wasn't interested.

America thrives on inventions that promote health and make for petter living. It provides a Patent System as an incentive for such inventions. Dr. Arno Brasch, the nuidea, and his associate, Dr. Wolf-

gang Huber, left Berlin for New

York 12 years ago. Food is an important item of trade, here, and financial interests backed the two physicists in developing their electronic gun to the extent of a half-million dollars. They rented an icehouse on Long Island and scrounged the area for hard-to-get parts required for their electrical apparatus. The pilot model, resembling somewhat the steel skeleton of a skyscraper, be-

the top. Out of this combination of transformers, insulators, and giant electronic tubes there protruded something similar to the muzzle of a gun, aimed straight down to hit the target directly underneath. A 220volt house current was thus stepped

gan to tower toward the third-story

ceiling. Near this was a cylindrical

structure, tapering in sections to

up to shoot 3,000,000 volts. It was five years ago that this amazing gun began its operation of shooting electron bullets into specimens of food.

Poison Deaths of Children **Caused by Careless Parents**

Parental carelessness plays a big part in the more than 600 deaths of children each year due to the accidental swallowing of poison, according to Dr. Jay M. Arena of Durham, N. C.

Dr. Arena is associate professor in the department of pediatrics, Duke University School of Medicine and Duke Hospital.

"Children who survive the ingestion of poison may be left with permanent disabilities," he added.

"Poisons contained in household agents are responsible for most of drugs and household agents that contain poison were made inaccessible to children, such poisonings could be almost entirely prevented."

Lye, he explained, is one of the than 136 children were treated for stricture of the esophagus caused by swallowing lye. Many of these cases were due to sodium hydroxide in washing powders, drainpipe

cleaners or certain paint removers. Among other causes of childhood poisonings listed by Dr. Arena are the following: strong acid, kerosene. iodine, strychnine, phenolphthalein, barbiturate, salicylate, aniline dye, lead, and mercury.

Farm Land Boom Farm land prices on an over-all basis may have experienced a record rise over the last decade, but the increases varied widely as between one section of the country and another, according to figures cultural Economics of the U.S. Department of Agriculture. The boom was led by eight states, headed by Kentucky, which enjoyed increases of more than 200 per cent between the 1935-39 average of dollar farm land valuations and July of this year. More than half these states are in the South. Thirteen others, mostly in the South and Middle West, showed rises of between 150 and 200 per cent, and fourteen more between 100 and 150 per cent. The remainand Dr. W. W. Brown of Liberty are ing thirteen showed gains of less

> High Hat The expression "to high hat" or

be snobbish toward one of lower rank probably goes back before the days when the top hat became a symbol of wealth and social position. The rank of a Spanish lady in the latter days of the Roman Empire could almost be measured by the height of her head covering. The more important the lady, the higher her turban towered above her

The ocean contains enormous

quantities of small plants and animals, many of them microscopic in size, which cannot swim but float with the tides and currents. These are called "plankton" and they form the principal food of various whales, as well as sharks and many other kinds of fishes. The animal plankton is said to have a nutritive value equal to the best meat, since they consist largely of protein, 12 Colors. while the plant plankton equal rye flour. The main difficulty seems to be in harvesting. A biologist who studied the matter has said that to meet the normal food energy requirements of one person would require the animal plankton each ue from a volumne of ocean water

al to an area the size of a foot 5-3 years, and 29 percent in the past 20. pall field, and about five feet deep.

STONY POINT NEWS

Feb. 4 - Mrs. Bernadine Tudder vas a visitor at the meeting of the Friendship Club at the home of Mrs. Wayne Heimgartner on Thursday. Ruth Heimgartner and June ZumHofe demonstrated the making of lamps, and it was decided to make lamps at a later special meeting. Mrs. Tudder talked about "Make-Overs" and showed different easy changes that could be made to modernize or make over clothing. On February 14 the group plans to meet with Mrs. Walter ZumHofe.

Published Weekly by the Union Oil Service at Kendrick W. L. "Bill" Rogers, Editor

HELLO, FOLKS:

Well, it seems as if "Old Mother Nature will never get through picking those geese," but of course it will all come to an end in time but in the meantime, use your phone to keep us "on the jump" filling your fuel oil tanks. You'll never find a cleaner, hotter fuel than those Union Burner Oils. Call us at 1251 for proof!

Chorus Gal: "I've got a husband who spends all his money on me." Second Chorus Gal: "Stop, you're making me jealous."

Chorus Gal: 'It should, dearie. He's your husband!"

Going tough in the snow? If so, come in and let us equip your vehicle with mud and snow tires tractionize your present ones, or fit it with chains and tighteners.

And don't forget, we'll test your anti-freeze and recommend the proper mixture for complete safety

A housewife, returning an egg she had borrowed, stepped inside her neighbor's kitchen and called out: "I'm going to lay an egg here on the kitchen table."

Came a deep male voice from the next room: "Wait a minute — this I've got to see!"

Lubrication is very important to your equipment for winter operation. Come in and let us lubricate it thoroughly with Union Lubricants, and fill the crankcase with that famous Royal Triton Motor Oil. It will assure easy starts and complete protection.

Yes, we stock chains, mud and snow tires, anti-freeze, etc.
