Miss Bertha Gash was hostess to the senior class of the high school on Wednesday night of last week. A party composed of A. H. Potach, George Morscheck, John Vandenberg,

Changes Made In First Security Directors

Salt Lake City, Utah.—Major top level management changes were made during an organizational meeting of First Security Corp. directors following the annual meeting of the company's stockholders here Monday.

Marriner S. Eccles, principal organizer of the corporation 47 years ago and chairman of the board since 1952, was elected to the newly-created office of honorary chairman.

George S. Eccles, since 1945 president and chief executive officer of the firm, was elected chairman of the board, continuing as chief executive officer.

Spencer F. Eccles, who has served as executive vice president of the corporation since 1973, was elected president.

Marriner S. Eccles had announced during the annual shareholder's meeting earlier he would ask to be relieved of his responsibilities as chairman and would recommend the board elect George S. Eccles as his successor and Spencer P. Eccles as president.

He told stockholders: "I will take Dick Nebelsieck, D. Scharnhorst, Henry Hanson and Harry Schooler, the latter taking the party in his big truck, left early Sunday morning for the Humboldt Placer Mines, owned by A. H. Potach and 2 other men.

F. B. Hampton and family have returned to the old home place on the ranch after spending the school months in town.

According to reports a deal has been closed whereby W. H. Gage transferred his home place, just south of town to Fred Shirrod. The consideration is said to have been \$115 per acre. Possession will be given this fall.

Jesse Kane will spend the summer at the Elliott ranch with her sister, Mrs. Leo Edwards and family. A real nice white frost adorned everything Wednesday morning.

great personal satisfaction in these changes for they will assure continuity and the highest competence in the corporation's management."

Marriner S. Eccles' long association with First Security dates back to 1913, when he became an officer of the Thatcher Brothers Bank at Logan, Utah, one of the pioneer banks of the First Security organization. At the age of 38, he became the first president of the First Security Corporation when it was organized in 1928.

Mr. Eccles was called to Washington, D. C. in 1934 when he was to embark on a distinguished career in government spanning 17 years. As an assistant to the Secretary of Treasury, one of his first assignments was heading a sub-committee which shaped what was to become the Federal Housing Authority FHA.

He was appointed governor of the Federal Reserve Board, and served as chairman of the Board of Governors of the Federal Reserve System for 12 years from 1936-1948 during which time the central banking system of the US was reorganized and revitalized. Mr. Eccles returned to the West and assumed the chairman ship of the board of First Security Corporation in 1952.

Mr. Eccles has also held an important role in the development of other major business enterprises, among them Utah International Inc., one of the largest corporations of its kind in the world. For 40 years he served as principal officer of the company, and is currently honorary chairman.

He is also chairman of the board of Amalgamated Sugar Co., one of the Intermountain areas leading firms. He is author of "Beckoning Frontiers," a personal history and economic chronicle of his years in forming and implementing government policies.

He has been the recipient of honorary Doctor of Laws degrees from the University of Utah and Utah State University.

George S. Eccles began his banking career in 1922 after graduating from Columbia University School of Business. In 1928 he was one of the organizers of First Security Corp., and was elected secretary, treasurer and director. He was named executive vice president in 1931. He has served continuously as president and chief executive officer of the corporation since February of 1945. He has been a member and chair-

man of the Corporation's Executive Committee since its inception.

Meanwhile, he also has served as president of First Security Bank of Utah, N. A., and chairman of the Executive Committee of First Security Bank of Idaho, N. A., both affiliates of the Corporation.

For many years, George Eccles has been prominent in international banking circles. He was a consultant abroad to the US government's economic Co-Operation Administration (Marshall Plan) and in later years was a participant at World Bank meetings and International Monetary conferences. He also served as chairman of the 11th annual Monetary Conference of the American Bankers Association held in Vienna, Austria.

He is a past president, director and honorary lifetime member of the Reserve City Bankers Association and the Association of Registered Bank Holding Companies, as well as an honorary lifetime member of the International Monetary Conference.

Mr. Eccles serves on the Board of Directors of several of the largest corporations in the United States, including Utah International, Inc., Husky Oil Limited, Union Pacific Corporation, Amalgamated Sugar Company, Farmers Insurance Group, Aubrey G. Lanston & Company and is an honorary director of Texasgulf Inc.

George Eccles has received honorary Doctor of Laws Degrees from the University of Utah (1963), Utah State University (1970), and Westminster College (1974). He also received the "Outstanding Achievement in Business" award presented by the College of Business of the University of Utah in 1965.

Spencer F. Eccles, new corporation president, began his banking career in 1959 following graduation from the Columbia Graduate School of Business, when he joined one of the nation's largest banks, First National City Bank, New York City. He joined the First Security organization in 1960.

A year later, Mr. Eccles was named an officer of First Security Bank of Idaho, N. A., Boise, one of the First Security Corporation's principal affiliates. He progressed through the ranks with the Idaho bank and was ultimately elected director and senior vice president in charge of the bank's largest division.

Mr. Eccles moved to corporate headquarters in Salt Lake City in 1970, where he assumed duties as executive vice president of First Security Company, the service and operating arm of the First Security Corporation at which time he was also elected a vice president and member of the executive committee of the corporation. He was elected executive vice president of the corporation in January of 1973.

The new president is a member of the Reserve City Bankers Association; Association of Registered Bank Holding Companies and the American Bankers Association. His outside banking activities include directorships of Sun-Valley Company, Inc., Anderson Lumber Company and Medlab Computer Services.

Other Corporate officers re-elected were Willard L. Eccles, v. president and secretary; Thomas P. Hawkes, v. president and treasurer; Dr. Elroy Nelson, v. president and economist; and Harold J. Steele and Ralph J. Comstock, both vice presidents.

Forest Fires don't just happen. Carelessness causes the majority of all forest fires. Just a few minutes of carelessness may save a few thousand trees.

Genesee FFA Held Parent-Member Banquet

The Genesee FFA chapter held their annual Parent-Member banquet on April 29. The fact that Genesee has the second smallest chapter in the district did not stop them from putting on a successful banquet. The

chapter bought 40 lbs of rolled beef and 13 dozen dinner rolls. Other dishes were brought by the members. The decorating committee headed by Kevin Odenberg deserves commendation for a job well done.

Mark Mustoe was guest speaker. Mark was the 1974-75 FFA state secretary. His interesting speech circled around the idea of setting your goals and being optimistic about life. His speech was enjoyed by all. Entertainment was supplied by the Genesee high school small ensemble under the direction of Larry Ge.

LOVE THY NEIGHBOR

Does your neighbor develop a cool attitude about this time of year? If so, it might be because he isn't happy with your dandelions seeding his lawn.

No, there isn't a law against letting your dandelions bloom merrily along in the sunshine but good neighbors are valuable and it isn't fair to let your weeds (this includes dandelions) go to seed and blow all over your neighborhood.

Many people say they are pretty and don't hurt a thing. Pretty for a short period in the spring but a ragged lawn the rest of the year is the dandelions stronghold. The old adage 'you can't raise two things in the same spot' is true. If a big dandelion plant occupies the space then

The chapter handed out many awards to members of the community for outstanding service toward the chapter. Stanley Shirrod and Gary Hook were made honorary members. Special appreciation awards were given to George Mof-fett, Supt. Lester Diehl, Laverne Anderson, and Martin Stout. Louann Mader was named chapter Sweet-heart. Also awards were given to members. They are as follows:

Contest participation: Kevin Odenberg, Kathy Kinzer. Livestock production: Dan Stout; Scholarship: Ron Burt. Star chapter farmer: Mark Shirrod. 1st First Bank Watch: Max Schwenne.

The meeting was presided over by Mark Shirrod and he extends thanks to all who made it a success.

Reporter: Joe Anderson

the dawn grass suffers. Most people and especially those that care about the appearance of their home and appreciate their neighbors, eliminate dandelions.

A solid green carpet of grass is cool, inviting and attractive.

Dandelion seeds were brought from Europe to the U. S. A. on a shipment of used rubber overshoes. From their introduction into Connecticut they spread rapidly across the country.

Dandelions are perennials. That is, the same plant comes up year after year. Dandelions are not considered a noxious weed but they are offensive to the eye of the careful gardener and proud home owner.

Dandelions are about the easiest of the perennial weeds to control. The herbicide 2,4-D is very effective and generally one spraying a year will soon allow your lawn grass to thicken up into a dense carpet.

There are several ways to use 2,4-D. It can be bought already mixed in a dry fertilizer and easily applied with a spreader or you can get the 2,4-D as a liquid to mix with water.

Two precautions when using 2,4-D. First, to be sure to use the non-volatile, amine form. Second be sure not to get the spray drops on flowers, shrubs or garden plots.

If you have any question as to the safe type of 2,4-D ask your county agent or garden store dealer.

You can spray right up to shrubs and flowers with the amine form of 2,4-D. Use a piece of cardboard to mark the side next to the plant so you don't inadvertently reverse the cardboard and rub the 2,4-D off on the next plant. Keep the sprayer

Tips on Smoking Fish Given

By Stu Murrell
Idaho Dept. Fish and Game

Looking optimistically toward opening day of fishing season next month, anglers need to begin now to figure out what to do with the fish they will catch.

Smoking the fish really adds a new dimension to eating pleasure, and the few weeks before opening day is the time to get the smoker ready.

My first attempt at building a smoker was an old wooden box set over a pit. Racks inside the box held the fish above cut green willows over a hardwood log. This fuel combination produced a good flavor, but the burning rate of the wood in the pit is hard to control, and the meat also was burned several times.

Later, I invested in one of the commercial smokers, but found it smoked a little too cool. The fish needed additional cooking in the oven. An old refrigerator is ideal. You'll need a metal pan for hardwood chips and a hot plate to heat the chips. The fish is placed on the metal racks in the smokehouse and the smoke does the rest.

The box is tight and the chips merely smoke instead of burn. Small holes bored near the top of the box let you control the amount of circulated air.

There are two ways to smoke fish. One is hot smoking or kippering. The other is cool smoking.

The recipe for good smoked fish goes this way:

After cleaning the fish, place them into a brine—8 to 16 ounces of salt per gallon of water—for 12 to 24 hours. Then, remove the fish and put them into fresh water for 2 to

pointed down or a gust of wind will cause the drops to drift.

The pressure can sprayer, the jar on the end of the hose, even a sprinkling can will do the job. Be sure to follow the directions on the container and apply plenty of water to get a thorough coverage.

A plastic squirt bottle works when you get your dandelion population under control. Yes, you can dig the pest out but why do it the hard way when 2,4-D does the job so quickly, easily and effectively?

4 hours. Drain the fish well and dry with a cloth or paper towel. Let the surface of the meat dry—very important—then oil the racks with vegetable oil to prevent sticking.

Place the meat on the racks with skin side down and smoking can begin.

A thick, milky secretion may appear on the surface of the fish during heating but this is a good source of protein and does not have to be removed.

The smoke should be warm at the beginning. Test with a thermometer until you have the temperature at around 100 degrees. Smoke the fish for 4 to 6 hours at this temperature to enhance the flavor.

Finish the smoking with hot smoke or oven heat—up to 150 degrees—so that the fish cooks thoroughly. To keep the oven from overheating open the door for a time.

Cool smoking is another way to get this spring's trout ready for eating.

Using this method, brine is mixed with 8 to 16 ounces of salt per gallon of water. Forget the fresh water after the brine bath. Drain the fish dry then thoroughly and place them in the smoker.

Smoking does not have to be a 24-hour process day after day, but it should be completed as rapidly as possible.

Dry out and flavor the fish with warm smoke at temperatures not higher than 90 degrees for 1 to 5 days or until sufficiently dried.

You can experiment with adding flavors like tabasco, onions, and garlic by adding these flavors to the brine and freshening water. If you like pepper, sprinkle it on the fish before putting them in the smoker.

When completely dry, smoked fish is ready to eat. Smoked fish can be kept at 40 degrees or less until you are ready to use it. Or, they can be reheated before eating. I've had poor luck freezing smoked meat. It keeps better if stored in the refrigerator.

Some of my best smoked fish has been winter caught whitefish and kokanee from Anderson Ranch Reservoir, both during the summer and those from the fall spawning run.

They tend to have a good fat content.

The University of Idaho has a past management action program operated by the Cooperative Extension Service. This program on the green peach aphid in potatoes in south-eastern Idaho has improved Idaho potato quality and reduced pesticide use. Success of the effort rests on total community involvement plus U.S. Department of Agriculture and State of Idaho cooperation.

Give a gift to grow on

What does it feel like to face the world on your own?

Is it fear? Is it determination? Is it excitement? Or is it a combination of all three and a lot more?

Those are questions we all have to answer for ourselves. But the one common denominator that draws the thread among all those who face the confrontation successfully is "Maturity."

Maturity means being

able to accept the world for what it is and make the best of it.

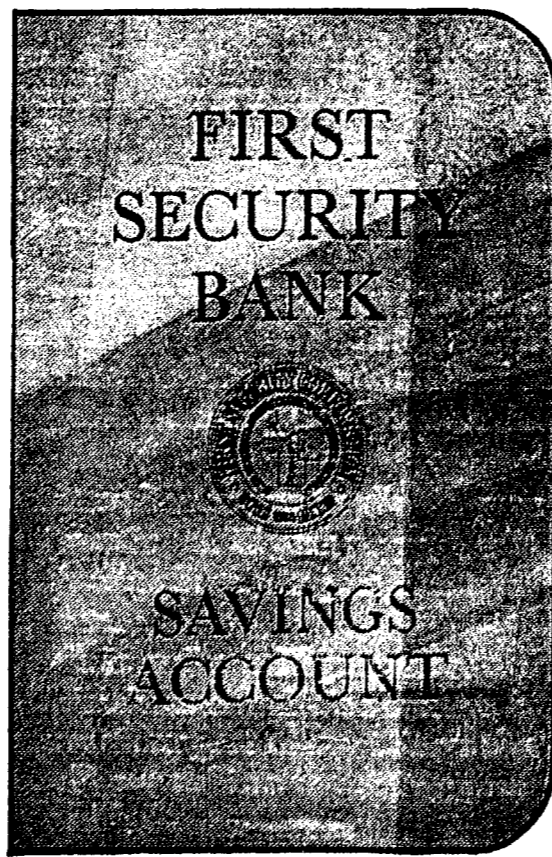

Maturity means realizing that whatever's out there doesn't always work out the way we'd prefer.

Maturity means being prepared.

A savings account or savings certificate from First Security is one of the best ways to go into the world prepared.

That's why it makes an ideal gift for someone you know and love who is about to make the trip.

A savings account earns high interest and is insured against loss. And it helps build a sense of security and confidence right from the beginning.

Interest compounded continuously on pass-book savings. Paid every 3 months.
