The nine game management units that are open April 23 through May 1 will be 11, 13, 14, 18, 19A, 22, 23, 32A and 39. Regulations set a bag and season limit of one wild, bearded turkey and legal hunting arms are a shotgun using BB-size shot or smaller, or bow and arrow. A valid turkey license and a tur

berries are favorite foods.

With very few exceptions, only
those birds in established flocks of Merriams turkeys will be available for hunting. A few of the new birds that have been relocated are in hunting areas, but they will be elusive

targets, Norell said. It will be at least another 2 years before the season will be open for flocks that were introduced in 1982 and at least three years for birds that were brought in this past winter, he added.

Economy Shows Improvement, says **Bank News Letter**

Definite signs of improvement in Idaho's economy during the first quarter of 1983, according to James Hoogland, Jr. and Roselle Robinson managers, quoting the First Security Newsletter. The quarterly report, which will be published this week is edited by Dr. Kelly K. Matthews, vice president and economist for First Security Corporation, financial

With uncertainty still prevailing in financial markets, a cautious economic rebound in the first half of 1983 may provide the basis for additional interest rate reduction and lay the foundation for economic growth continuing into 1984.

Perhaps the strongest industrial segment at this point in the recovery is residential construction. Housing starts, nationwide, in the first quarter exceeded 1.7 million units annual rate, an increase of 89 percent above the 200 control of the contr cent above the 900,000 recorded dur-

ing the first quarter of 1982.

To avoid recent production gains ending up as unsold inventory, it is most important that the pace of consumer borrowing and buying strengthen in the second quarter. A high unemployment rate still at 10.3 percent and continued interest rate uncertainty dampened consumer spending plans.

A total of 741,360 wheat-producing acres in Idaho have been set aside for conservation use, equivalent to 41.4 percent of the total wheat acreage base. It was a new experience for all of
