Minimize Mowing Chores... Use Embark[®] PGR

Spraying Embark PGR (Plant Growth Regulator) slows the growth rate of most turf grasses for at least six weeks. Applied early in the spring on actively growing grass, Embark PGR also virtually eliminates the need to mow around farm buildings, imple-ment storage aeras, roadsides and prevents unsightly seedheads. This terraces. Embark PGR is more economical than mowing.

A recent national survey found that it costs an average of \$18.38 each time to mow an acre. Embark PGR costs less than \$15 an acre. It's more economical to spray Em-bark PGR than it is to mow one time. What's more, most conventional spray equipment that farmers already have will do the job. Embark PGR is the only product

of its kind now available to the farm market.

Ask your McGregor fieldman for detailed information.

Suggested retail price: \$27 / quart, \$79 / gallon (one gallon covers 5¹/₃ acres of farmstead.)
